Ten-Tec, that's what I have. Fancy with all sorts of features? Nope. Good performance? Yup. BTW, Did you know Ten-Tec has come out with a major update to the Omni VI? Acording to Scott Robins at Ten-Tec I's called the VI+...and it has DSP based noise reduction and an extra filter in the second IF, to name a few of many improvments...They will debut it next month in QST.

Now the good part? You can have your Omni VI upgraded to a VI+ for about $300.00 by the factory!

Yaesu is announcing the debut of a competitor to the ICOM 756 RADIO.
It is called the Yaesu FT-920. It has HF plus 6 meter coverage, Dual
inband receive, DSP. and many other new features. It is replacing the
FT-990 HF radio. Go to the following web site to see a picture of this
radio. The Web site is a UK DEALER who has a picture of it on the first
page of equipment .

Can't get my recently aquired L-4B to put out more than 900W. Never owned one before so....wondering if it's just weak tubes, or is it me: Using an FT-1000, and if I drive it with more than about 80W, the Plate Amperes and Grid MA go beyond their .565 and 220 limits no matter how I tweak plate and load, so I stop. If I drive it with more (either in CW/TUNE or SSB mode) the wattage increases, but so do the limits! I'm using Eimac tubes, and they may be a bit worn. Would this be a normal symptom of worn tubes? Plate Hi-voltage shows 2600. Any help appreciated.

Message-ID: <01bc1bcf$040d6c20$02d866cf@default>
Source record: 183074

Gerry,

The JPS NIR-12 is by far the best of them. I have tried that, the Timewave DSP-9+ and the W9GR DSP-3 and there is simply no comparison for noise reduction.

However, it all depends on what you want to do with the DSP. If you work CW and don't mind building a kit, I would suggest the W9GR DSP-3. It is the best bang for the buck. I just assembled one today and it works just fine. It does not do as well on noise reduction as the NIR-12, but it has lot of other features that are useful. The AGC is nice. The same feature is on the DSP-9+.

The W9GR unit does have a few problems, such as a nasy click when you change from one filter to another, but the quality of the KIT is top notch.

The NIR-12 has a few glitches too, the fact that some of the essential controls are on the rear panel means that you are restricted in the way you place the unit. Howerver, the simultanuous notch and noise filter is incomparable to other filters. It is simly great.

The DSP-9+ has an AGC like the W9GR DSP and many of the same features, however, I have found it to be less effective on noise on 10 meters and the volume control on mine is very scratchy.

Overall, you will find that a DSP enhances reception on both HF, VHF and UHF. It can be used in several different ways to reduce bandwidth (which reduces noise inherently) or to reduce noise in a wide-band mode. It is no panacea, however, you still will benefit from a good IF filter to cut the QRM and reduce the passband to whatever is required for the modulation type.

>Ray Arntsen <longhaul@pacifier.com>

Two very simple answers - either:
A) Put up a much smaller antenna, or
B) Put an attenuator in line (switched out on transmit) to reduce the
strength coming into the receiver. (And thereby eliminate the gain of
the antenna.)

Hand-helds have precious little room in them for a great amount of
front-end filtering (not needed with small, relatively inefficient
antennae normally mounted on the radio) ... when you put up an antenna
that is nearly twenty feet long, with beacoup gain on both bands,
intermod is the price you pay! Modern radios, with little filtering in
the front end, and broad-band receive, are intermod-prone from the
word "GO". (Ever notice how the old radios, with no out-of-band
coverate -like the Icom IC-2AT- didn't hear Intermod? They had decent
filtering inside the radio - energy from outside the ham band never
made it pas the filter!)

If you want to devise some switching between bands, or will confine
your operation to one band only, the filters made by DCI, and carried
by most major ham stores, work wonders - but kiss your out-of-band
receive goodby ... and kiss the intermod goodby at the same time.

Hope this helps somewhat!

Very 73,

"Squeak" Porray, AD7K

4299. ICOM IC-756 and IF-DSP

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-16 00:00:00 UTC
From: "Adam M. Farson" <farson@ibm.net>
Message-ID: <3306A61D.1847@ibm.net>
Source record: 183076

The ICOM IC-756 at first sight looks like a whole lot of radio for the money, but it does have one very serious flaw: the Auto Notch Filter (a DSP function) is post-AGC. This means that a strong carrier in the IF passband will hit the demodulator and AGC pickoff point, develop AGC voltage and swamp the receiver. Therefore, reception of weak signals in the presence of such a carrier will be gravely compromised. You can emulate this problem by turning on the marker, tuning for maximum S-meter reading,
and pressing AUTO-NOTCH. The marker tone will vanish, but S-meter reading will not change. Compare this to an analog 9 MHz IF notch filter, as in the IC-781 or IC-751A.

The only partial fix for this deficiency is to install the optional narrow filter pair (FL-223/222 for SSB, FL-100/FL-52A for 500 Hz CW, FL-101/FL-53A for 250 Hz CW) and hope that the undesired carrier is not too close to the lower flank of the IF passband, then adjust the Twin PBT to filter out the interfering signal.

Regarding IF-DSP inside or outside the AGC loop, a couple of points can be made. Every DSP system has group delay - the time delay between entry of the raw signal and exit of the processed signal. The more horsepower the DSP chipset has, the higher the group delay figure. If the DSP device, with group delay in the range from tens to hundreds of milliseconds, is placed inside the AGC loop, the phase shift imposed on the signal by DSP group delay will be inside the AGC feedback path, and could destabilize the AGC loop, causing motorbosting. So if there is DSP functionality inside the AGC loop,it will have to be minimal in order to keep the group delay down. This was probably the basic consideration behind Icom's decision
to implement the Auto Notch the way they did.

As DSP chipsets get faster, the group delay will be reduced. But fast chipsets are still very expensive.
The highest DSP IF frequency I have enountered in a commercial product is 25 kHz(in the W-J HF1000 receiver.
The amateur rigs use 11 to 15 kHz as a "final IF".

Egg on face time, to some extent, gang ... I had read about four or
five posts about hand-helds before reading the post and replying to it

... but the information above is pertinant to the discussion if you ignore the references to handhelds. Mobile radios, with their wide-band coverage, are inherantly prone to intermod, without (costly) track-tuned front ends ... I have seen very few radios that I would consider really resistant to intermod in our high intermod areas here in Las Vegas (one of the highest users-per-capita areas in the country - every hotel in town has at least several - and some fall into the area of "many" - in-house users of radios ... almost every employee, down to maids and waitresses carries a pager ... many carry handheld tranceivers - almost every department of every hotel has its own channel, or at least a shared channel!)

73 to all,

"Squeak" Porray, AD7K
Manager, Amateur Electronic Supply/Las Vegas

Rick:

Sounds to me like what you're describing is normal. You can't get a
bunch more out of them simply by cranking up the input. I run an L-7
with my FT-1000D and max it out at about 60-70 watts drive. Cranking the
'1000 up to the 220W that it is capable of would just give me another
100 watts and blow everything up.

Dave

The Motorola "hole saw" is designed specifically for antenna mounting,
and removes a small ring of paint outside the hole, to facilitate
grounding (and thereby proper operation of the antenna) ... it is not
"cheap", but, on the other hand, it isn't expensive, either ... and it
will do a "good and proper" job of drilling the hole for you ... and,
best of all, it does not require access to the "back side" of the hole
for operation!

I have found that some two-way shops will do a very good, professional
job of mounting a "Motorola" mount and running the coax cable for a
very nominal fee - might even consider that, if you have one antenna
and want it mounted right, with no fixed equipment outlay on your
part!

4309. TS-850 and YK-88SN filter

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-16 00:00:00 UTC
From: Valerio Porta <vporta@mclink.it>
Message-ID: <3306F09D.55BA@mclink.it>
Source record: 183086

I have an YK-88SN kenwood filter, which on the data sheet they claim to
be
compatible with TS-430 and other radio (I bought it several years ago
for a
TS-440).

Now I have a TS-850SAT, which is supposed to accept this filter as an
option. However, while the built in filter is EXACTLY looking as the one
I
have, the provided holes for optional filters seems to expect something
different
(i.e. a small PCB with filter on it ?).

Is anybody aware of any pinout / mdofication / arrangement which I can
use to
fit this filter is the 850 ?

Thanks in advance,

73's de IK0EAY - Valo

Don't cut that green wire. The mods are a bit more complex as just
cutting a wire. Some jumpers needs to be opened or closed depending on
what you want.

4312. 870 problems

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-16 00:00:00 UTC
From: Rober - Jane & Pugsley III <629371@worldnet.att.net>
Message-ID: <33071409.5C4E@worldnet.att.net>
Source record: 183089

My 870 recently developed a problem - the volume will suddenly drop to about half normal (including the S-meter levels) when listening to the rig, and although you can still hear signals in the background, they become weak. To get things back to normal you have to hit auto tune for the antenna tuner, then everything goes back up to normal levels. In a few minutes (or hours), everything will again suddenly drop out, until you hit auto tune again.

It can happen just sitting on one freq or while tuning around - you have to enable the antenna tuner and hit at tune to get the signals back up to normal level again.

Before I send it back to Kenwood for repairs, I just wanted to know if anyone has heard of this problem in the 870? Is it a known glitch? Actually, I'm hoping someone will say its a known problem with the unit, and Kenwood will repair it n/c. :)

Thanks in advance, Robert.

The "false" comes into the picture when the league acts "concerned".
Fact is we have lost, and will loose spectrum, since the idiots in
Newington have promoted this as a "hobby" and dropped the "service". Add
incentive licensing, contests and NTS and you have a good case to get
rid of the whole lot of 500,000! ARRL did not get concerned about
220-222, now the whole band plus 2m and 440? The ARRL stacks the deck,
no doubt, but it (ham radio) is over. I am 34 and have been in radio 24
years. I said 15 years ago, hams were becoming "bookmarks" for
commercial interest. I was right. I work in the communications business
and read industry periodicals. Just wait till you find out we will also
be loosing space on 40/75 meters! This is coming real soon.
Burt, I do not know how you could put "which president do you trust
more?"
on your page. This piece of crap, in lieu of a leader, sells everything
to highest bidder. That is why you support the idea of "sharing" and
"getting along" since Clinton has made it so. For those who read this:
RCR a commercial trade newspaper has reported the Clinton regime plans
to make $50 BILLION off of additional spectrum auctions the next 2

years. They also admit that wireless company officials went to "coffees" at the white house. Now you ask why does Burt support all this? Because by Clinton selling our spectrum, he will get more federal money to use at work along with a raise for nothing! Computers, the internet in every classroom, more education spending..get it? More utopian spending at Burt's place of work.

I do agree 90% of hams are boring and unskilled, but to get to the point, sharing the 2m band will lead to exclusive allocation and then what do you do? I will become an outlaw: guns, scanners, ham radios, cigarettes, etc.

I will see you on 144.410 no matter who "owns" it!
Chris

I haven't seen the '840 schematic, but it is fairly common practice
(even on professional receivers) to bridge the widest filter position
with a suitable attenuator. The 1st IF roofing filters will probably
provide a 3dB bandwidth of about 20KHz (a guess)- if the radio does not
have severe audio rolloff. It's OK for Hi-Fi local AM-BCB signals but
pretty annoying on SWBC. But, I agree, $100+ is a pretty steep price to
pay for a souped-up ceramic filter that can't even muster a good -60dB
spec (it's rated at 6/50).

>| MCL SBL-1 | <-- Stamped in the metal can itself
>| -10 | <-- Printed with ink
>|___________|

The SBL-1 is a level 7 mixer. The dash numbers typically indicate
that the mixer was specially qualified over a certain frequency
range for a particular customer. According to the Mini-Circuits
Designer's Handbook, -10 is not a stock item, but there are other
dash numbers, and they all denote special qualification over portions
of the SBL-1 frequency range, so I think it is safe to assume that
is the case here too.

****

Don't worry about them. I have done it and I'd do it again. It's not so
much the radio being "type accepted" but rather a matter of money.
People that produce marine radios want you to spend your money on their
junk rather than have some smartassed ham radio operator mod their
own radio to work in that portion of the band they make radios for.

Dave:

Ten-Tec is alive, and from what I understand, doing better than ever. They have a new radio: The Omni VI Plus, which will appear in the new issue of QST. Their web site is:

http://www.tentec.com

They also have a thriving kit business.

BTW: Thanks for the plug on my IC-740. There is a limit to the number of HF rigs I can own at any given time, so the oldest one has got to go. Honestly, only some the current high-end rigs have a better receiver (IC-756, IC-781, FT-1000D, FT-990, Omni VI, etc...).

I bought a new IC756 at the Orlando Hamfest. In busy band conditions with the NOISE BLANKER ON, you will hear very loud pops at a rate of 3 to 15 pops a second, known in Japan as PPS. The noise blanker works, but not nearly as well as Kenwood or Yaesu. Line noise eats it up.

4329. HELP WITH YEASU FT-227R

Newsgroup: rec.radio.amateur.equipment

From: qlf@msg.ti.com
Message-ID: <5e9utc$aak@sf18.dseg.ti.com>
Source record: 182852

I have an old Yeasu FT-227R with what may have been a common problem for these old synthesized radios (I am aware of one more FT-227R with the same apparent problem.) It will fairly regularly go into a mode where the receiver and transmitter will go dead and the display will go blank with the exception of the far right digit which becomes a zero. As close as I can tell from tracking through the synthesizer logic shown on the radio's schematic, this may be an indication that the synthesizer's frequency has gone outside the ham band; i.e.- Most likely that the synthesizer has gone out of lock.

Has anyone else with the same problem ever found a fix for it? I'd like to use this radio for a dedicated packet rig if I can get it working reliably.

Please reply to me directly via e-mail at <qlf@msg.ti.com>

Mike,

I seem to recall the replacement fuel pump I put in my S-10
Blazer had a ceramic cap in parallel with the motor leads.
I think it was behind that filter 'sock' that slips over the
pump assembly. I was more irritated after having the vehicle
towed 100 miles on a Saturday nite in 90+ degree wx to really
get wound up over the capacitor!

I bought a B&K model 747 tester over the week end, and was wondering if any one has any experiecne with this model? ie would you recomend it? how much might it be worth?

Also While it did test some of my stock as good most were bad or marginal, while it is possible that they are bad it just seems like a lot. All of the 6BA6 and 6BE6 I tested showed bad.

Thanks in anvance for your assistance.

4336. FT-8000 Fan Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-17 00:00:00 UTC
From: Peter and Colleen McGreevy <PMCGREEV@MAIL.IDT.NET>
Message-ID: <3308AB4C.2973@MAIL.IDT.NET>
Source record: 182859

Greetings,

I asked this before, and got a few good replies, but I want to get a few more, so here goes....

I have an FT-8000, and after you key it, the fan goes on high for a minute (no problem with that)... but after it is finished with high speed, it spins at a slow speed ... forever... until you either 1-turn the rig off, or 2-key it again, causing high speed to go on (and then it will return to the low speed spinning afterwards again...)

Is this normal? Could you 8000 owners out there pse check to see if yours does the same... it just seems damned odd to me that it will spin at low speed indefinitely....

Tnx in advance -- Pete -- KA2YDY

4337. Yaesu FT-840, Comments?

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.misc

<<< Sale in San Jose, CA. >>>

Had to take antenna down because of landlord.

37 foot Telescoping Mast originally designed to support a 10-80 meter inverted-V, but could be used to support a small rotor and beam (28mhz up to vhf/uhf).

Material used is schedule 80 PVC Tubing, in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75". The sections are held in place by a u-clamp and thru center eye-bolt arrangement. Each u-clamp has 2 outer eye-bolts, along with the thru center eye-bolt, which are used as guy points.

The bottom 3 sections use PVC sched 80 reduction union joints (very beefy) which I reamed out to allow upper sections to slide thru freely. The three over-lapping sections are over lapped by 12, 16, and 18 inches, from smallest to largest dia., respectively. Each upper section has 2 sets of 3 spacer bearings that take up the excess play inside each over-lapping section.

As you may well have gathered, I have an Engineering background and took some time designing this Telescoping Mast. It wasn't something I just threw together.

The last 2 years in San Jose, CA, has brought storms with winds as high as 75 mph. This Mast barely moved during these storms. Also, I use three sets of guys which are marine-type nylon rope that is UV resistant.

Mast is more durable and can withstand higher wind speeds than a steel mast, when guyed properly. Also, Mast doesn't interact with antenna like a steel mast would.

> available"
> during an emergency situation?

No, there's no such permission, it's actually worded as a negative.
S97.403 says that nothing elsewhere in Part 97 prevents a license
holder from any activity to save life or property which are under
immediate threat.

You may see that as an unimportant difference, but I think it is very
significant. What it means is that you have no permission or
imunity to rely on if and when the FCC or some other branch of the
Federal, State or Local government charge you with a violation of
some other statute, only from penalties for violating CFR 47 Part 97
itself.

From: parnoul@amoco.saclay.cea.fr
Message-ID: <5ea30m$bcs@news.cea.fr>
Source record: 182867

Hi there,

Down here in Europe, we have these new regulations about LPD's
(low power devices) usable without license.

The rules are

- power under 10 mW out

- antenna attached to the box (now external antenna)

- 433.050 to 434.790 Mhz band available

- virtually any modulation type (phone, digital) allowed though
identified when the device is to be agreed

It was pretty easy for the Radio stores to ask Alinco to adapt
the DJ-S41 to these features, as the antenna is already attached
for good to the HT.
They are now addressing the mass market of "family" or "professional"
outdoor and indoor short range HT's, now license, free communications.

I bought one, offered to my wife, the bands are shared, give us
communications possibilities...

The 10mW @ 433 Mhz are amazing, far more efficient between two car
on the road than the 4 W CB rigs at day time for instance !

The good thing is that when a citizen calls the radio store looking
for HT's for some need, they are know answered "we have what you need",
before one was telling them "well, they are some fancy devices, but they
are reserved for amateur use", "oh yes, you can buy it, we just wanted
you to know"...

Enjoy,

73 de f5hnk/Patrick

Also check the offsets, it may be set for simplex, and they probably
cleared the memory at the factory.

Most repeaters above 147.000 are +600 and below are -600

4347. RF Interference From True FitnessTreadmill - Suggestions??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-17 00:00:00 UTC
From: fallowsj@cadvision.com
Message-ID: <5e9tt6$gfi@elmo.cadvision.com>
Source record: 182870
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment

My neighbour has a True Fitness Model 450 Treadmill which gives off immense radio interference from Broadcast Band well up through shortwave. I complained to the manufacturer, who send an AC Line Filter which has some effect, but not very much.

The interference sounds like "wump ! wump!" roughly twice a second, but varies with the treamill speed. It is not totally spread out, but rather focused on certain frequencies throughout the spectrum. Level of interference is S9+, and even my ANC-4 cannot take it all out.

I am trying to determine whether or not this type of interference is common to True Fitness Treamills, or not, and what might be its cause. I would really appreciate any suggestions or help, as I want to contact the manufacturer again this week.

I have another brand of treadmill which is totally RFI silent.

4349. FS: German Military RF transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-17 00:00:00 UTC
From: Loek d'Hont <ldhont@ti.com>
Message-ID: <01bc1cf5$6dc31d00$8f0aaa9d@pc-tir22.pac.sc.ti.com>
Source record: 182872

For sale: Synthesized Military HF transceiver, German built, late eighties.

Specifications:
100 watt RF, freq 1.5 to 12 MHz in 1 kHz steps + VFO, USB,LSB,AME,FSK,CW
See Janes Military communication '92-'93 page 135 (SEG100D)
(freq coverage is printed wrong in the Janes specs, though)

Consists of following:
- Receiver-exciter unit,
- RF unit containing power amplifier plus automatic RF matching network,
- 110/220V 50/60 Hz power supply
- Accessory box containing all cables, microphone, headset, Junker morse key and more
- User- and repair manuals

Unit also has a built-in RTTY modem and RF speech processor.
Receiver-exciter contains 4 mechanical filters (2.2 kHz and 500 Hz for both sidebands)

Installation is like new condition and works perfect.

Ask $950 for it, shipping not included. Ship only CONUS due to export restrictions

This sounds to one old curmudgeon like good news in general.

In the current gotta-have-the-latest-import-rig world of instant gratification and even more instantaneous obsolescence, its refreshing to see that at least one manufacturer is generally more concerned with the high performance "radio" part of its radios than the glitz of its display, number of memories, ability to cover HF PLUS 900 MHz or IF DSP marketing hype.

Its also nice that you can look at a picture of an Omni VI and tell immediately that its not part of a VCR or home theatre system :-)

WHY do you ONLY want to give away 2 meters, Burtie?

Why not get all the hams to write the FCC and recommend that they give away ALL of our spectrum?

I am sure the readers of this newsgroup are already dashing off letters by the DOZEN to the FCC in response to your great message, since we all follow you like the pied piper!

Burt Fisher <burtfisher@geocities.com> whistled a happy tune like:

|>Anyone wishing to register opposition for the ARRL/AMSAT submission
|>should send a brief e-mail message to wrc97@fcc.gov. The Subject line
|>should say "Reference No. ISP-96-005 IWG-2A." A simple statement to this
|>effect, "I oppose the ARRL/AMSAT opposition to the NVNG MSS flexible
|>allocation proposal," will be included in the public record and will
|>help to drive home the point that there is broad-based approval to well
|>conceived 2 metere sharing proposals. It ought to be clear to the FCC
|>the public good is poorly served by allowing hams exclusive use of these
|>valuable
|>frequencies.

|>Please note! The proposals the League opposes are not FCC proposals, nor
|>are
|>they endorsed by any other branch of the government. They are industry
|>proposals. The League's objective is to falsely demonstrate there is
|>broad citizen opposition to the industry proposals.

|>Additional arguments or evidence also is welcome. Important! Comments
|>should
|>reach the FCC no later than March 4, 1997!

Yeah...it does make one wonder how all of his "fans" contact him with e-mails expressing great gratitude for his "services", as he has maintained in the past.

If there is any doubt that the little gnat is full of BS, this should have removed it.

Try contacting a cooperative GM Service Department at a dealership in
your area...no, you have to find someone who wants to "work with you."
GM publishes numerous bulletins on reducing noise in third party radio
systems when installed in their vehicles. These are available through
dealers, or there is a GM office that will mail/fax these out as
requested. I know this service exists because my brother had gotten
bulletins from GM in the past.

I'm a professional educator of electronics and computer service
technology. I've only had my ham ticket for about a month now, but I'm
learning a lot about this fascinating field. In fact, it was a few of
my students that got my interest up in ham radio, and I've done what I
can to promote it to my other students. I view it as a national
resource... and also realize that it is fast becoming an endangered
resource!

Reading these newsgroups has helped me have a better understanding of
not only the technical aspects of the field, but the kind of people that
are involved in it. The vast majority of the participants in these
groups are extremely helpful, and willing to do anything they can to
promote amateur radio... proud followers of The Amateur Code by W9EEA!

I've also learned that there are a small number of participants that
prefer to use the newsgroups for their own pleasure... attempting to
degrade the service and those participating in it. No doubt these types
have other interesting diversions when their computers and rigs are
down, such poking sticks into hornet nests to observe the reaction.
I've been around long enough to know that this type of person will
continue to provoke a response until they are ignored long enough. Even

the hornets learn this lesson!

Perhaps the formation of a new newsgroup, such as rec.radio.amateur.whiners-cryers is in order, so that these types can have their own little playground and stop spamming the groups that are helpful!

Also... please don't think anyone identifying himself as a "teacher" speaks for everyone in that profession. Hopefully you too have been around long enough to realize that there will always be a few dog-eared cards in the deck. Fortunately, they are easy enough to identify.

Obviously, I'm opening a path for flames by posting my opinion here... and from the childish battles I've read on these newsgroups, I certainly expect a few. I'll just ignore them. Then the flamethrowers will find another nest to poke.

My two cents...

John - N3YPR

This is my final comment on this subject, so JeffreyH, Busybody,the fellow who openly admits the he "will never mind his own business" will probably end up having the last work.

Many local hams have seen my radio shop and can verify all of my claims to its existence. As for the modifications, I didn't "suggest" that anyone do them, nor did I tell anyone how to (I'll leave that up to the many, many users of the popular Artsci publications I was referring to); In response to a previous post, I merely stated that the modification could be done with success.

As to your other gratuitous comments, get a life Jeffrey! No-one wants to listen to you pontificate out here. Maybe you should get a job for the federal government- there, you can spend as much time as you want in pious oversight of the moral fiber of the rest of us (or perhaps you've thought of that already...)

For Sale: Repco "Dimension Plus" UHF Repeater System

- 440-490 MHz TX/RX Operation
- Continuous duty operation
(no fan required if operated at +25 Degs. C ambient)
- 10 to 40 Watt TX Output (adjustable)
- 0.30uV RX Sensitivity
- Built in Battery Switching and Charging Circuit for Aux. Power
(uses external Lead-acid battery)
- Switchable 115/230VAC Operation
(Built in power supply)
- Internal CTCSS or DCS Encode/Decode
- Compatible with most tone panels
- Comes with Service Manual, and complete
set of extra circuit boards including power supply transformer and
spare receiver and transmitter/PA.
- Currently crystalled up and tested on 444.900MHz (TX), 449.9MHz (RX)
- Works flawlessly, and has never been in service.

Also includes:

- "dB Products" DB-4072 Duplexer.
($1350.00 new list price)
6 cavity unit w/80dB notch (100W capability)

- "Midland LMR" 19" Enclosed Rack cabinet w/locking doors, 4&#65533; tall

- "Rotron" Rack type dual 200CFM fan type blower.

All items are installed in the rack. I haven&#65533;t formulated a price yet
for the complete system, but I will have one figured out by the
Charlotte Hamfest on March the 8th in Charlotte, NC.

Look for me there in the flea market area! Any questions, E-mail me
at parmentier@mindspring.com

Come on, Burt....
Let me see ---- public service events (bike races, marathons, sporting events, Special Olympics, APRS at the real Olympics in Atlanta, etc), search and rescue communications (whether on foot, in vehicles, or in the air), coordination of communications for emergency management agencies (from city/municipal to FEMA), and what about hurricanes, tornadoes, wildfires.....

Is that enough or do you need me to waste more bandwidth trying to convince you of something the rest of us acknowledge.

There is a mod to the mic preamp of the 706 that resolve the poor audio quality. ICOM will provide it or make it for you. It is only a resistor and a condenser mod that give more gain as well as better freq. response.

Using a better mike also helps.

I have done the mod to my 706 and I simply LOVE this little radio!

Doesn't say very much about your example, does it Burt? Are you
telling us that you are such a poor teacher and such a poor example,
that you can not guide your students to the more interesting,
productive areas of ham? Please don't say there are none, you and the
rest of us know that that is an outright lie. Of course, if you truly
believe there are NO redeeming features in amature radio, then that
would prove that you are not a good teacher, or at the very least,
lack the knowledge and drive to be a "good" teacher. All that said,
I'm not stating that you are not a good teacher, like I said, it could
simply be that you are spouting bilge and nonsense for some strange
reason known only to yourself.

>It is a vast wasteland.

If your above example shows your ability to motivate our youth, could
it be possible that the same could be said of your classroom?

>Hams can not ignore.

Why should hams ignore? I, personally feel, that is one of the
problems in ham radio. We ignore TOO much. You yourself have
mentioned this. Please make up your mind on how you feel it should
be.

>No you do not. If you find ham radio interesting you will love watching
>water freeze.

You have NO room to talk, Burt. YOU are guilty of being exactly what
you accuse others of being. You are still the UTH (remember that
one), you just use internet instead of ham. I find this interaction
interesting, but it is definitely more boring than talking to someone

live, on air. If this is you idea of interesting, then maybe you'd find watching water thaw fascinating. A "typical ham" (your definition) is still a "typical ham" whether it be via radio or internet>

For anyone who may question this, the DJ-S41 is the European brother
of the DJ-S41T. The DJ-S41 is limited to 10 mW out.

I've had fun with the thread that's come since posting this rig, but I'm starting to get a little tired of Nutless Idiots such as yourself, littering up the newsgroups and destroying other people's ads. It's okay though, because I have a growing list of boneheads I'm going to be watching very closely for. I'm actually quite anxious to see YOUR next attempt to sell an item. I assure you that there will be more attention drawn to the outlandish prices instead of the equipment you've posted.

Have a fine evening,

Mike

Good for you! Now you can call Motorola and ask for it. You'll find the price is $350 and you have to sign several long documents stating that you will not copy it. The program has an internal serial # registered to the buyers name, so copies are a *bad* idea.

Am I bitter on this topic? Well perhaps. Moto RSS software, and RSS "lab" software especially, is some of the hardest stuff to find anywhere on the net.I've never seen any
for FTP'ing and NOBODY will give you a copy of any of it. Period.

Matt

4399. TS-850 KENWOOD HF FOR SALE

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-17 00:00:00 UTC
From: DAN <AD4HW@citrus.infi.net>
Message-ID: <33091396.6D17@citrus.infi.net>
Source record: 182922

Hello OM,

I have a Kenwood TS-850AT HF transceiver for sale. This is the model
that has the automatic antenna tuner, and is one of the finest radios
ever made. This radio is perfect in every way. There is not a scratch
on it, and it functions like new.

This unit has a general coverage receiver and a built-in SWR meter.
The 850 is very versatile. If you're not into high-tech, it is easy
to operate right out-of-the-box. If you are into high-tech, it has
many programmable functions that are useful and interesting.

I am the original owner (non-smoker). The price is $1150 firm, cash,
pick-up. Add $25 for UPS delivery, insured, and packed in original boxes.
(I paid $1750 for it at AES.)

Included at no extra charge are an Astatic microphone, a computer interface,
and an excellent shareware logging program.

The computer interface allows the 850 to send data to your computer, and
allows your computer to operate the 850. I use it with a logging program.
The logging program automatically collects data from the 850 to enter into
your log. Then, with a few keystrokes, you can print your QSL labels very
efficiently. The logging program also has a TNC window. You can use it
to monitor a DX cluster, and the program/interface will automatically
switch the 850 to the band and frequency if you wish.

I would be glad to demonmstrate all of these features--if you've never seen
them before, they are very nifty.

73, Dan.

Hello OM,

I have a HAL composite monitor for sale. This is housed in an aluminum case (yes it's shielded). It was once used with a HAL DS3000 terminal unit. Although I haven't used it operationally, I have hooked it up to the DS3000, and the greeting display comes up nice and crisp. The physical appearance is very nice and clean.

I am asking $50 pick-up (firm), add $25 for UPS, well packed.

Also included at no charge (if you want it) is the DS3000KSR terminal unit. I have never used it, and it is missing a few of the plastic switch toggles (micky mouse switch design, but this would be very easy to fix). If you want this, add $20 for UPS if shipping is required. (I will refund any excess shipping charges.)

My QTH is about 80 miles North of Tampa.

73, Dan.

The Noise blanker was Not designed for Line Noise, but pulse type
noise, much like ignition noise or over the horizion radar. For Line
noise use the NR control that is what its there for.

4403. Any other NCG radio owners?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-17 00:00:00 UTC
From: AL7OQ <mfeldmn@ibm.net>
Message-ID: <3308EE74.3389@ibm.net>
Source record: 182926

I recently added a mid 80's vintage NCG 7/21/50 to my shack, after an extended search. For those of you not familiar with this rig, it's a 40,15, and 6 meter SSB/CW tribander, 10 watts output, with a built-in power supply, about the size of a standard smaller HF rig (TS-450, for example.) The rig was imported by NCG in California (the same folks who import Comet antennas) and manufactured by Matsushita of Japan (Panasonic, National Radio, etc...) It's pretty much a bare bones rig, but has a fantastic receiver, and excellent transmit and receive audio. I also own an NCG 15M 15 meter monoband mobile rig, have had it for quite some time, and find it equally good.
(I also had the NCG 15SB, an older version, which was not a good radio.)

My point: I would like to get in contact with other NCG owners. The rigs are fairly rare. Are there any mods or improvements available? Is there any useful info we can exchange? I'd also like comments on the NCG 10/160 and the prior version of the tribander.

73,
Martin

That is a very good suggestion! It also adds to my list of things the ARRL does NOT do to earn their "keep" and thus keeps the ARRL on my list of organizations that won't get a cent of my money! They were already on the list for refusing to represent the wishes of the vast MAJORITY of hams that CW testing be made optional,(ie: required only for people who want to use the CW portions of the bands). The ARRL is obvoiusly there to do one thing: TO SELL PUBLICATIONS,(not to represent hams, as they pretend)!

I request that EVERYONE would STOP ASSuming that EVERYONE ELSE has memorized every detail of every model in every catalog "from spark to space"!

The above quote is just one of hundreds of examples of someone being too damn lazy to type much more than the brand-name and model-number. It is also an example of someone who is only PRETENDING to want to sell their equipment, because if they really wanted to sell it, they'd tell us what the heck is so good about it other than being just another box with knobs on it. Most of the time they dont even say what band it's made for and THAT is the number-one criteria a person looks for when buying a radio! If it doesn't have the band you want, then people NEED to know that right away so they don't waste any time on it. Wrong band = Wrong radio.

I'm here to tell you that many people, not just me, are TIRED of this bull, people! If you're too lazy to SELL what you are selling then please DON'T even waste ANY bandwidth on it at all! We have ENOUGH articles in these newsgroups to rout through as it is already! Well? DON'T WE?

Like it or not, this is a true and valid point that I've made, no matter how you look at it. And since it is a valid and true point, don't even waste my time flaming about it. No matter how much you express your dislike of the point I've made, no expression of dislike can ever make the facts any less true. So save your typing when it comes to pointless flames, not when it comes to details about radio equipment!

Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc, rec.radio.amateur.space

Re what was previously posted regarding the ARRL/AMSAT position
on this issue. I would recommend that individuals do their own
research
prior to sending the suggested response. The poster points out that:

"Please note! The proposals the League opposes are not FCC proposals,
nor are they endorsed by any other branch of the government. They are
industry proposals. The League's objective is to falsely demonstrate
there is broad citizen opposition to the industry proposals."

I would ask myself - when did industry ever propose to GIVE any new
frequencies to the Amateur community? As far as "broad citizen
opposition to the industry proposal", the Amateur Community will
generally have to be its own best advocate. We know the value of
the 2 Meter band during times of stress and emergency, the general
public is sometimes quick to forget the acts of service.

The poster also states that your "simple statement" will:

".....be included in the public record and will help to drive
home the point that there is broad-based approval to well conceived
2 Meter sharing proposals."

He appears to be asking you the amateur community to use the same
"simple statement" to support the view favored by industry. Somehow
the logic escapes me - when has the Amateur not lost out in the end
to every "well conceived sharing proposal"?

The poster then wraps up with the following:

"It ought to be clear to the FCC the public good is poorly served
by allowing hams exclusive use of these valuable frequencies."

Pay close attention to that phrase "valuable frequencies"! Obviously
they are of financial value to someone or industry would never have
come up with this proposal. This is $$$$$ speaking - NOT service to
the community, not public relations, and certainly not the voice of
a broad based citizenry.

Anyone wishing to register SUPPORT for the ARRL/AMSAT submission
should send a brief e-mail message to wrc97@fcc.gov. The Subject line
should say "Reference No. ISP-96-005 IWG-2A." A simple statement to
this
effect:

"I fully support the ARRL/AMSAT opposition to the NVNG MSS flexible allocation proposal." This might be followed by a BRIEF example of a situation wherein the Amateur Service and the Two Meter band was of value to the community in times of stress/emergency.

As noted by the posting, your view -- supporting OR dissenting -- will be included in the public record and will help to demonstrate that there is support for your side of the question. Please do your own research, and don't get caught up in the rush towards "broad-based approval" of either side!

You know the value of the Two Meter Band and you know there are other groups who would like to market a few more Garage Door Openers or some other commercial (read $$$$$ making) devices. Once the frequencies
are gone, there may not be any others to share.

Comments must arrive at the FCC prior to 04 MAR 97

Please note, I apologize for the length of this posting. I was concerned
that the language in the original note ("oppose" the "opposition") might
be construed in the wrong way and do a dis-service to the Amateur Service.

73 Dave K7HMP
==========
SKYWARN Observer

I am checking out all the different handhelds and I'm now leaning towards an Icom 2m/220 dual-band or the standard...
Should I stick with 2m/220 or should I go for the less expensive 2m/70cm. The latter of the two is more popular and less expensive, but here on the west coast (California) there is a repeater net for the 220 which will get a handheld signal from San Diego to Las Vegas to San Francisco...
Any comments. I am planning on coming to a final decision next month. What features should I look for in a handheld, what price should I look for? What do you think about 220 vs. 70cm?

Glenn,

Check to be sure the 720a band switching relay operates correctly. I
have had an 720A since first on market. Only problem here is the
subject relay. Symptom is diminished received signal. Key transmitter
several times and received signals pop in. There is a fix but relay is
buried and difficult to reach. Only mods I'm aware of are 3-30mhz full
transceive and an add on pwr pack to retain memory. I'll email you mods
if interested (and if I an find them).

cheers,
gene N7EO

Wrong here. If the League alerts its members to a threat to the amateur band allocations, and the membership (and Amateur community at large) agrees, it is by no means a "false" demonstration. It demonstrates that there is, in fact, STRONG, BROAD opposition to the sharing of these band segments with other sevices, as NO method of sharing has been proposed that would not severely interefere with existing services here, especially to the amateur satellite service. I encourage all those amateurs (who have not already done so) to file their comments OPPOSING the sharing of these band segments with other services.

Thanks.

It sure sounds like you might have a cold solder joint in or around
the antenna tuner. See if you can XMT when this happens. Also look
for something obvious maybe your antenna has a cold connection. I do
not have this problem with my 870 s/n 101 of Sep 95.

4424. HF SWR meter using LEDs ??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-17 00:00:00 UTC
From: gem <gem@istar.ca>
Message-ID: <5e89kd$44i@news.istar.ca>
Source record: 182970

Has any one any experience of, or built, a simple (QRP) SWR meter using LEDs? The idea would be to simply indicate (by minimum brightnes) the minimum SWR while tuning. The LEDs would replace the meter.

Any info would be welcome - either post to this newsgroup or reply by email

4431. Re: Icom 756 - nice machine!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-17 00:00:00 UTC
From: Burke Baumann <baumann@doitnow.com>
Message-ID: <01bc1c8f$960d8220$359d62cf@default>
Source record: 182977

I am curious where you got this information about a modification kit for the European version of the IC-756. I spoke with Icom tech support and they were not aware of any mod kit for any version of the IC-756. This was a person I had spoken with many times including before I purchased my IC-756. If this had been seen in the radios distributed overseas one would think this would have been corrected in the later units sent to the USA. ICOM did acknowledge they had received a radio back with a complaint of phase noise but had not verified the problem yet. Under what circumstances was this problem observed?

After reading this post and speaking with ICOM I decided to try a test of my own. I contacted a fellow ham. We went to a quiet frequency on 6 meters so as not to disturb anyone or be bothered by adjacent signals. I transmitted a continuous carrier in CW that was a good 40 db over S9 at the other station about 10 to 15 miles away. He listened + or - 10 Khz from my frequency. At + or -3 Khz there was no indication on the S-meter of any signal.

There are several possible explanations for this.

1. The failure mode only occurs on some frequencies and not 6 meters. Given a quiet band at night I may try to repeat the experiment on 20 meters.

2. Your radio may have a faulty component or manufacturing defect that is responsible for this problem.

3. Maybe only some of the radios exhibit this failure.

4. The problem may be caused by phase noise in the receiver that was monitoring your signal. This also could make the transmitted signal appear to be very broad. This could be the case since you indicated your IC-756 had a good receiver. If the vfo had phase noise it would effect the receiver when receiving in the presence of strong adjacent signals. Mine is fine under these circumstances.

How reliable was the source of your information about this mod?

When you get anymore information I am sure we would all be interested in hearing it.

4440. Please help with ft-208a

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-17 00:00:00 UTC
From: harel@glx.chief.co.il
Message-ID: <5e8t5mhtq2@news.ibm.net.il>
Source record: 182986

An old Ham gave me a 2m handy from Yaesu, Model is ft-208a.
The unit is in working condition but i have few problems with it:

1. Power suplay: is it possible to operate this handy from 12-13 volt ?
2. Programming the RPT channels, how do you do that ?
3. Back cover missing, does anybody has one to spare ?
4. Weak battery, the original battery seems to be weak and can't be charged.
does anybody know where to buy one ?
5. Operator/Workshop manual, if you have one please e-mail me.

Thank you very much for your help!

Regards & 73

Evidently this person is misinformed the summerkamp is not the origional
but the copy. The 2950/2970 is a fine radio for those with the mentality to
use them

4444. Re: Radio Shack dual band hand held

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-17 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <9702170244538727@atdbbs.com>
Source record: 182990

Radio Shack will unveil its new dual-band HT - the HTX-204 - next
month (Catalog Number 19-1124). $399.00

-Compact size (NOT the config. of the HTX-202/404 by ANY means!).
-120 total memories (2 x 60).
-2 Call channels (US frequencies).
-Large, backlit LCD screen.
-Six character text display.
-DTMF 15 character memory x 10.
-Cross-band repeat.
-Clone over the air.
-Seven scan modes. 3 Hold types.

At 12VDC:

High = 5 Watts
Med = 2 watts VHF / 1.8W UHF
Low = 350mW

With supplied 7.2V battery:

High = 2W VHF / 1.8W UHF
Low = 350mW

-Four modes of dual watch.
-15kHz steps.
-Programmable battery save...as low as .20mA.
-Low battery indicator, auto power off.
-RF attenuator for each band - programmable.
-Auto repeater offset

...and more.

>
>Oh well, My thanks to those that got me going in the right direction.

Dean, what exactly were the mods performed in TSB 95-11-3? Did this consist of adding bypass capacitors outside the tank? inside the tank?

Was there a special filter that plugged in line with the wires giong to the tank?

Was ther some filter module that was installed inside the tank?

If there were capacitors/filters installed in the tank, what were they made of that would stand up to years of gasoline exposure?

I have a similar problem with a GM fuel pump. I have concluded that trying to add capacitors externally (right at the tank) would be mechanically very difficult and could reduce the reliability of the pump. I don't like the idea of adding ordinary ceramic capcitors inside the tank.

Ferrite beads and extrnal shielding have proved to be of little value.

I appreciate any information that anyone can provide.

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

4455. FDK Multi 700EX Manual & Circuit Diagrams Required

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-18 00:00:00 UTC
From: John@datasafe.demon.co.uk
Message-ID: <3309d028.2260170@news.demon.co.uk>
Source record: 182701

I have recently purchased a 2nd hand FDK Multi 700EX for use on packet. However, the squelch does not operate and therefore cause a problem with sensitivity.

I would be very grateful if you could let me have a copy of the manual and circuit diagram.

Regards

John

My Drake TR-4 tuning knob is jammed (won't turn in either direction). There doesn't appear to be anything wrong with the plastic gear mechanisms which the tuning knob is coupled to. Has anyone had this problem? I just use this as a receiver and am a real novice at amateur radio. I've been unable to locate a repair service in this area (Northern California). Any ideas? Please respond at my e-mail address: hristos@pacbell.net

I also have had my 756 for a week and find it to be a fine radio. The LCD specrtum display is far superior to the Kenwood SM230 and with the makers in abled showing you were the dual receive is (or the Split TX Vfo) you can see the activity on your Tx Freq. Not exactly a toy as one person has said.
DSP is good not as good as the 775DSP but no one else has one that good either.
I have not seen any phase noise on my signal or heard it when I worked it from another QTH.
I Agree with Bill.
Regards Steve W8KZY

>
> Tnx in advance -- Pete -- KA2YDY

Pete,

I am quite suprised that almost nobody talks about the FT-8000R in
the newsgroup here, although the FT-50r seems to get the most attention.

I have been using my FT-8000 for over a month now and I love it. The
wide RX is what I love the most. But I am not going to chase the
rabbit.

To go back to your question: My rig's fan does exactly the same thing
you described. It seemed to annoy the hack out of me in the beginning,
but I have soon grown to get used to it (just turn up the volume
hehe...).
The fan will even speed up when the temperature gets higher. I am not
very
worry about the fan now; however, the operating temperature is what
concerns
me. It seems to me that the heat sink is a little too small for the
output
power and when even the fan is blowing hard (not sucking air) after a 10
minutes rag chewing.

One thing I observed that is different from what you noticed. It is
that
the fan will eventually slow down and comes to a complete stop on my
rig.
The whole blowing cycle will start again as soon as your transmition

begins.

Just another $0.0002 worth of opinion.

Very 73!

Like someone said "It does not matter if it is legal or not, if a life is on the line..."

This is true, if anyone's life were on the line they would probably even use illegal drugs (such as marajuana) to save themselves. I think that what most people are trying to say here, is that for casual or replacement use, it is illegal to use a ham radio for out of band transmission (with the exception of MARS/CAP of course). These radios were not FCC TYPE ACCEPTED for that use, and consequently they were never tested for such use. For one to simply assume that if he clips a wire he can transmit anywhere that he is authorized to do so, is ignoring this regulation.

These radios have very "wide" receive front-ends, and fairly narrow (read: ham band only) transmitt bandpass filters. Attempting to transmitt out of the ham bands on these radios could generate spurs which will possibly interfere with other vital communications in the area. In theory, one might jepardize some other legitimate "life-threatening" situation by interfering with their legitimate communications efforts!

Think about this before you use your Kenwood or Yaesu handheld on the marine bands, or especially on police and fire frequencies. If you insist on taking the chance and saving a few bucks on equipment, at least take the radio to a qualified tech so that they can put it on a spectrum analyzer to make sure that it is transmitting a "clean" signal.

Just a thought. 73's, Steve.

Hi Dave....I have a DR605 which I purchased from Dayton Hamfest in 1996.
The "one wire mod" is simple; just take off the metal case and locate
the
blue wire on top of the rig, near the front display. Snip it and this
will
open up full tx and rx for vhf and uhf. By the way, I love the radio and
the price wasn't too shabby either ($410.00).

Good luck and let me know how it turns out!!

Simple: He just refers them to the following newsgroup:
news://alt.radio.pirate
Just because this guy has NEVER been involved in SkyWarn, RACES, ARES, or built his own repeater network from the ground up, he thinks these things should be left to the broadcasters, and commercial guys only! He's obviously got the knowledge, and spent some time doing some technical things (he's an extra), but he must now be bored.

In article <doesn't matter who>:

>If you don't buy them for a year, do the bugs eliminate themselves?, or
>should the manufacturers throw out the first year's production, and add
>that to your cost? If everyone followed your line of thinking, no new
>products would ever be developed.

I've just picked up on this thread, but it seems to me that there are 2 points being made here. 1, the YEACOMWOOD breed of radios are fancy front panels with little to back them up. Style over substance. 2, it appears (this is strictly my opionion) that the modern, wizz-bang, dsp'ed YEACOMWOOD offerings are knowingly sold with substantial, major defects in engineering and reliability. Not all of them, but most. Add to that sub-standard and lengthly service, people are going to bitch.

I think what would satisfy most reasonable people is if the manufacturers simply admitted to their flaws, and provided some reasonable, timely means of getting the radio fixed, and fixed right the FIRST time. Note, I didn't say FREE. While it isn't fair to judge a radio, a pickup truck, an air conditioner, or a gas grill entirely on what one reads from the newsgroups, what is posted can't help but to have some influence on what people choose to spend their "toy" money on.

Myself, it's been nearly 8 years since my last "major" purchase of Amateur Radio equipment. As such, I am getting ready. I must admit that after my own experiences with Yeacomwoods, that my leanings are toward Ten Tec. This may be a mistake, dunno. But there does appear to be a widespread atmosphere of dissatisfaction with the Yeacomwood breed radios' performance, reliablilty, and service. Or is this just an illusion? A mis-interpretation?

There is precious little information on which to base informed buying decisions when it comes to Amateur Radio equipment. The market is too darned small and fragmented to support a Consumer Reports type of publication. Really, can you trust the product revues? Do the multi-page, full color glossy ads tell the story? I think not. All we have to go on is rumor, heresay, usenet postings, and a limited sampling of dubious testimonials. It's a crap shoot. Hit or miss. To describe my last radio purchase as a coin toss would not be far from the truth. BTW, it was an Alinco - problem free for 2 1/2 years, a record for me.

What is really sad is how some of this griping, whining, and complaining must look to an outsider. Surely there are many folks who read this stuff that are not hams, but may be thinking about it. After reading postings filled with venom and poison, personal attacks on people and companies, (not in this particular thread, but I have seen them) why then would they choose to become a ham? What's the motivation? This is not to imply that there shouldn't be debates and discussions concerning the relative merrits or faults of various equipment or companies. It just shouldn't get personal. Use Email.

To anwer the original question - No, I dont think we do. <G>

Depends on how it was configured thru the RSS... There are numerous choices for the scan function. 'operator selectable' being one choice. However 'talkgroup scan' needs to be specifically enabled for trunking radios if you want to scan multiple groups.

Your best bet is to read the radio, or get a hold of who ever programmed it and have them tell you how it's configured.

PREMIER Communications currently has an opening for a full time customer service representative. Duties include answering customer's technical, operating, and new product questions by telephone, mail, and the Internet, and exhibiting at 2-5 hamfests and coventions per year. Applicant must have an amateur radio license (any class), at least some experience using VHF/UHF repeaters, and a basic understanding of word processing, Internet e-mail, and the World Wide Web. Verbal and written language skills are also a must. The position is in Walnut, California.

You may send resumes:

BY MAIL:
PREMIER Communications
ATTN: Ken Collier, Marketing Director
20277 Valley Blvd., #J
Walnut, CA 91789

BY FAX:
ATTN: Ken Collier, Marketing Director
(909) 869-5710

BY ELECTRONIC MAIL:
Plain text in the body of the e-mail, or as a file attachment in either Dos text, MS Word for Windows, or Wordperfect format only.
Send to: ko6ux@netsol.net.

After your resume is reviewed and your qualifications are checked you will be contacted and an interview will be scheduled.

>Best 73 Frank
If you hate the constant sound of the fan running while just listening
on you 706 then you should try this simple mod!!

On the PA unit locate R65 47ohm next to the J1 coax plug on the left
edge of the board near the fan wire plug remove it "requires a bit of
heat and a small screwdriver to pry it of the board" and replace it
with 100ohm half watt. lower values will make fan run faster but more
noise you can try different values to find one that gives the air flow
you want and the noise level you are comfortable with. this mod does
not effect the hf tx fan speed or operation just the fan speed when in
rx

Amazing what small improvments you can make when you finally get a
service manual
I did not think anyone would want to change the hftx fan speed and
beware the 706 does need airflow when using hf! but you have a few
options with the tx fan speed i think looking at the curcuit!! if you
remove R 42 1k small smd, located between Q15 and the electrolitic
cap close to the fan plug that should disable the fast fan in tx and
it should just run normal rx speed or the speed after the first mod
but i would not recomend doing the first mod if you disable the fast
speed on tx. or another option could be R 41 22 ohm large smd close to
the back edge of the board right next to fan plug and replace it with
a higher value half watt that should slow down both tx and tx fan
speed but still alow a faster fan speed when in tx you would need to
try a few value's to find one you are comfortable with! anyway let me
know how you get on if you try one or the other sugestion i looked at
doing somthing because it was so anoying hearing the fan running when
the radio was quiet.

>
> :)

It is not impossible to do it... But it is not good engineering practice. Amateur Radio equipment is not type accepted for marine use for a reason; they are not as clean on the output as the type accepted ones are. But if the amateur equipment is used soley as backup to regular marine equipment that is no problem. The real problem is that alot of hams THINK they know electronics and RF theory, and in reality do not. that does not mean that one should not experiment - because it is experience that teaches best of all! So go ahead and experiment, but follow the rules, for they are there for a reason, your service monitors (if you have any) will verify it.

>Look carefully at Table 2: E receives 144-146 and 430-440, while E3
>receives 67-180 and 400-512 MHz.
Which is *exactly* my point: the receive ranges differ, yet the diode-matrix (D302-D308, labeled 'Destination diode' in table 2) is exactly the same. These diodes tell the unit how to behave. Now if the E and E3 units have the same diodes, how can they behave differently?

Note that I feel the documents contain a wealth of information,
I was just hoping to keep anybody from opening up his/her handheld and moving diodes, only to find out there is an error in this table 2. The TH79 is to precious for that.

> It appears there is no way to get the 800 MHz band on "K" (U.S./Canada)
> models, which should make Newt Gingrich happy.
Still, I see TH79A's advertised WITH 800 MHz in various newsgroups. As I understand it the older units can receive 800, but the newer ones can not. I somewhere read in an article that you can see this from the serial number:
===If your serial number is 603XXX or higher, that is all you will get. The
===TH-79A that I have posted is 602XXX
I cannot find the original article though- you'll have to search the net for it.
There may be a NOSPAM. in front of my E-mail address.
It is there to fool machines, not people.

In article <3309831B.6F2A@pacbell.net>
n6rky@pacbell.net "William A. Wetzel" writes:

> Amateur Radio equipment is not type accepted for marine use for a reason;
> they are not as clean on the output as the type accepted ones are.

I believe that this is incorrect. The reason why ham kit will not
pass muster for acceptance into Marine other services is the ability
of the operator to set the frequency arbitrarily instead of only to
the pre-set channels allocated. A 2m HT (<25W) is permitted a
maximum power in any spurious signal of the lower of 25uW and -40dB
versus the mean power at the fundamental, except that it need not be
reduced below 10uW.

Is the spec for the Marine Service acceptance any tighter than that?

Regards,
--

4535. NEED: HELP with FT-51R

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-18 00:00:00 UTC
From: "JOSE V. GAVILA (EB5AGV/EC5AAU)" <eb5agv@ctv.es>
Message-ID: <330999B8.745B@ctv.es>
Source record: 182804
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Hello and thanks for reading this message!.

I'm in trouble with a FT-51R in the spanish customs... This unit
was bought about two months ago in the USA. The question is that,
in order to clear the customs, the equipment should have an special
'Electromagnetic Certificate', valid in Europe. This certificate
should be specifically marked in the outside of the box. It is
a 'CE' logotype. Please, what I need to know is if in walkyes sold
in the USA about two months ago (or earlier), this logo is marked
in the box. I can't look at it because the box is in customs and
I don't want them to open the box if this logo is not on it, because
if it isn't, I should return the walky to USA...

Please, any help will be welcome!. This is urgent!.

Best regards.

73 JOSE

4536. Upgrading the PK232MBX

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-18 00:00:00 UTC
From: Jim Cummings <jcumming@clark.dgim.doc.ca>
Message-ID: <3309D55E.7B7@clark.dgim.doc.ca>
Source record: 182805
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

Greetings:

With the demise of A.E.A., I understand that getting the most recent upgrade Eprom for my PK232MBX might be somewhat difficult. I have one of those older products in which I had to install a daughter board in order to impliment the mailbox function. I believe that my most recent upgrade was dated 1991 or 92. But I had always contact the factory for those chips because they were never carried by the dealers up here.

Would anyone advise me if there might be an upgrade available for sale at a retailer, even in the US?

As an alternative, I have been informed that the QRZ.com CD ROM appears to have the relavent information in order to have a set burned. Has anyone tried this approach at all?

I would be grateful for any advice.

I would say 30% of all hams are active and 10% of those are involved in contests. Those 10% walk all over the rest in their piggish ways of hogging the band.

You are right, I should not use the word "all" as you suggested.

And what percentage of hams take part in the above?
And of those that do, ham communication uses 400000 words when 10 will
do. Hams are horribly inefficent voice communicators.

Hi:

Just recently found a 4-1000A grounded grid, tuned cathode Linear Amp. It is set up for 80, 40, 20, 15 and 10 meters. Works fine on these bands.

I would like to modify it for use on 160 meters. It used the B & W FC30A Bifiliar Filament Choke.

What I would like to know is the B & W FC30A filament choke rated/good for 160 meters???

Thanks, KE3NJ Dave Letterman

4543. Receiving 136-174 MHz on Icom 821H

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-18 00:00:00 UTC
From: "Bob Houghton (KC6LVG)" <houghton@cyberg8t.com>
Message-ID: <3309B7B4.1AB6@cyberg8t.com>
Source record: 182812

I just purchased an Icom 821H multi-mode transeiver and the manual says that the receiving range is 136-174 MHz, but mine is set for 144-148 MHz. The manual does not mention the software command to reset the range. I have reset the radio (warm boot) and the default seems to be 144-148. If you know the key combination that will open up receive on this radio, I'd be grateful for a reply either in this newsgroup of via email.

Thanks,

Bob

Is that what it thinks it tells you. When I demonstrate ham radio I make no editorial comment. I offer extre credit for it. If I leave the radio on the comment I get is, "you do not talk to those losers do you." Ham radio speaks for itself. Not even Jesus Christ could convince our youth to get on the air with the current crop of old white fat farts.

If you want to talk direct to the student that has no use for ham radio his address is on my WWW site. See him, he is the #1 student in the school with a perfect SAT verbal score. And he knows the score on ham radio.

What Duracell currently offers is a glitzy, slow-loading web page that glorifies the latest web page design fads and provides only the following data regarding my query:

"Keep extra batteries around for your convenience. Store batteries in a dry place at normal room temperature. Refrigeration of DURACELL Batteries is not necessary. Even after 5 years in storage at normal room temperature our batteries continue to provide dependable long life."

Not exactly quantitative, is it?

Hello to all,
I have the following items for sale.
HEATHKIT
SB600 Speaker, good condition $ 15.00
SB630 Station Console, good condition, manual (clock does not work) $ 35.00
HD-1416A Code Oscillator, manual, works fine $ 12.00
Heathkit Oscilloscope, model 10-10, compact, clean, well built, works $ 35.00

Lafyette HA-230 Receiver, good condition, very clean inside and out, covers
500 khz to 30 Mhz. This unit was made by Trio for Lafyette. No manual $ 85.00

EICO Test Equipment
Oscilloscopes Model 470 & 460, both work, no manuals $ 20.00 & $ 30.00
Signal Tracer, Model 174, works, clean, manual $ 25.00
Electronic VTVM, Model 249, works, clean. $ 15.00
Dynamic Conductance, Tube, and Transistor Tester, Model 666 $ 25.00
RLC Bridge Comparator, Model 950B, works $ 15.00

PACO Test Equipment
Model G-32, TV-FM Sweep Generator, works, manual, clean $ 25.00
RF-Signal and Audio Generator, clean, works $ 35.00

Western Electric USA, model 61C Signal Generator, works, clean,
10 hz to 10 Mhz. In metal shipable case, 22 Lbs. $ 25.00

Mercury Tube Tester, compact unit, with manual, Model 1100A, clean and tested
with known tubes and known tube Tester. $ 35.00

Starkit RF Signal Generator, old Canadian kit , copy of EICO 324 generator,
$ 15.00

Regards,
John Grow

>It is not impossible to do it... But it is not good engineering practice.
>Amateur Radio equipment is not type accepted for marine use for a reason;
>they are not as clean on the output as the type accepted ones are.

Really? A 25W VHF high-band transmitter is restricted to spurious/harmonic
output of -60dB/c; I haven't looked at the type acceptance regs for
marine gear lately but I don't recall them being more stringent. The
type acceptance regulations for land mobile and marine gear are intended
to prevent an operator from accidently operating on an unlicensed
frequency, hence type acceptance calls for fixed frequencies and
PL tones.

> But if
>the amateur equipment is used soley as backup to regular marine equipment
>that is no problem. The real problem is that alot of hams THINK they know
>electronics and RF theory, and in reality do not.

Oh, I know what you mean!! I once had a ham lecture me on network
standards, you know, CCITT, IEEE, IAB, stuff like that. When I
wouldn't agree with his wrong assertions, he told me I didn't
know what I was talking about! Oh well, at least I don't have
that problem with the _professionals_ I work with. ;-) ;-)

>Kevin, WB2EMS

Does BMKMulty allow you to use a standard RS-232 cable or do you have to
swap a few wires at one end or the other? Also, back when I had a CP-1,
I found it useful to replace those trim pots with 10 Turn equivalents and gave
it a tweak every now and then. It would dig out signals my PK-232 had trouble
with every time. Got my first 225 countries using one on RTTY, then used it
as an external modem with the PK-232 until I got my DSP-599zx. Now the
599zx gives the PK-232 a DSP front end in the form of the RTTY Remodulator
feature. Admittedly, I'm only active on RTTY, but then I like to chase DX and
that is often synonamous <sp?> with weak signals and pile-ups.

The FCC does, I guess. Maybe that's why they made rules against using
non type accepted equipment on commercial bands.

>Our department now has
>more radios, and I no longer must carry my HT into fires. It is my

>Department, Myrtle Beach, SC

Can't argue about saving lives, Web. But somebody will probably argue
that the Myrtle Beach Fired Department does not have the authority
to overide the FCC.

I don't think anyone who is a ham has a problem with you saving lives with
your HT. I would imagine the problem comes in because the overwhelming
majority of the Mod Squad are ambulance chasing wannabe Jr. G. Men, or
broke Cocktails On The Fantail sailors who don't wanna spring for real radios
for the boat. Maybe there is a difference between a professional fireman
who happens to be a ham, and an amatuer sailor who became a ham because
the radios are cheap, I don't know......

A trip to my home page reveals there are many good files and programs for amateur radio operators that want to use Mac computers.

<http://www.mv.com/ipusers/wd1v/>

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Roster - a virtual "Who's Who" HyperCard stack with more than 780 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and their passions and put a design on your Mac Radio future when you see what neat things are being done!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get with just a click. Many of the programs listed on right there for FTPing.

* Ham Radio.FAQ - compiled on a Mac with a lot of links to great Mac FTP sites for radio, electronic engineering, and similar data.

> precious for that.
>

Ah, yes, and if you look at the figure on page 6, the "E" has a jumper
at W301, while the "E3" does not, And in Table 4, the TX-RX Unit number
for the "E" is X57-4402-71, while the "E3" us X57-4402-73. Do the X57
indicators imply the configuration of jumpers and/or diodes, or
different firmware? Things may be more comples than just moving diodes
and cutting wires. It's confusing (probably on purpose).

>Does BMKMulty allow you to use a standard RS-232 cable or do you have to
>swap a few wires at one end or the other?

You have to cut and jumper a couple of wires on the CP1 between the connector to the outside world and the circuitry - I think they steal one of the handshake lines inbound for cw keying, and one outbound for the data toggling since you don't want to go through the uart. But I use standard cables between the modified CP-1 and the computer, via a 4 position serial switch.

Also, back when I had a CP-1,
>I found it useful to replace those trim pots with 10 Turn equivalents and gave
>it a tweak every now and then. It would dig out signals my PK-232 had trouble
>with every time. Got my first 225 countries using one on RTTY, then used it

>feature. Admittedly, I'm only active on RTTY, but then I like to chase DX and
> that is often synonamous <sp?> with weak signals and pile-ups.
>
>73, John, NJ0M

Sounds right. I haven't tweaked mine up much - might mess with it some this winter. Actually got a hal st6000 now that works on receive, so I've been playing with that while trying to figure out why it doesn't fsk in transmit. That hears better than the CP-1 from what I've seen so far.

I got BMKMULTY primarily because it offered an upgrade path into PACTOR without major expense. I can also use it on either my mobile or base computer, without tying up a whole multimode TNC in each location. I occasionally like to do some digital work from campsites using a kantronics interface with BMKMULTY that runs on 12 vdc.

Thanks for saving lives! We all appreciate your efforts. However, the
AUTHORIZATION from the FIRE DEPT. doesn't mean squat. They don't have
the autority to authorize this - it must be done by the FCC. And while
use of ANY frequency is allowed in an emergency (when you can't
obtain help on a ham frequency, you no doubt could have
found another ham to call the accidents in to, instead of using
the Fire Dept. frequencies.

Thank you William for the post-

These are indeed correct.
The newer US versions of the radio have a different processor that
will not allow the extended coverage. No doubt a request-demand from
our wonderful government.

I have an HTX-202 (2meter HT) for sale. Bought it new a couple years ago when I passed my Technician exam, haven't been using it in the last several months so I'm going to get rid of it.

I don't know what to ask for it, so I'll take offers. I paid somewhere around $250 a couple years ago when I bought it.

I live in the Detroit area and prefer a buyer in the area.

Forgive me if this is the wrong group to post this to, after a quick look through the groups it appeared to be the best choice.

Email response is best, as I don't read the group.

4576. Icom 756 Spectrum Scope ???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-19 00:00:00 UTC
From: rlubash@poco.mv.com
Message-ID: <E5v8Dy.M76@mv.mv.com>
Source record: 182595

I am interested in the Icom 756 and was wondering if anyone has had a chance to get into the spectrum scope. I have had a lot of experience using the SM-230 station monitor and like the way it can be used to find stations on dead bands and quickly tune over to them, find that hole on 40 meters at night between the BC stations or see were the QRX pileup is for a DX station. My question is, is the scope function on the 756 versatile enough for these tasks? Does the LCD refresh fast enough to crank up the band to track down a blip? Is the resolution good enough to find that clear spot to operate in. Any information from the lucky new users of 756s would be appreciated.

Thanks es 73

Hi Robert,

You might check to see if Menu 08 is switched on (antenna tuner active
on receive). If it is, see if this problem disappears when you switch
it off. Generally, there is no need to have this menu turned on.

Regards,
Keith (KS9C)

I have for sale my Kenwood TS-940S w/built-in antenna tuner. This radio is in absolutely flawless condition, as it came out of the carton when new! Probably the finest example of pre-owned '940 available anywhere. Includes:

IF-10B interface
Pair of 500hz cw filters
J-Com level interface (needed to connect directly to computer)
Microphone
Original cartons
Original manual

PRICE: $1350

Thanks for reading this. You may contact me either by phone at 516-754-6808, or email k2kv@netusa.net

I have the first model of this radio (10 watts-6m) and I am satisfied.
The price was right. The only major shortcoming for what is designed to
be a mobile radio is that the noise blanker circuit appears to be less
than useful. Others have agreed and the fix by ALinco apparently offers
little improvement.

>>that to your cost? If everyone followed your line of thinking, no new
>>products would ever be developed.
>
>I've just picked up on this thread, but it seems to me that there are 2 points being made here. 1, the YEACOMWOOD breed of radios are fancy front panels with little to back them up. Style over substance. 2, it appears (this is strictly my opionion) that the modern, wizz-bang, dsp'ed YEACOMWOOD offerings are knowingly sold with substantial, major defects in engineering and reliability. Not all of them, but most. Add to that sub-standard and lengthly service, people are going to bitch.
>
>I think what would satisfy most reasonable people is if the manufacturers simply admitted to their flaws, and provided some reasonable, timely means of getting the radio fixed, and fixed right the FIRST time. Note, I didn't say FREE. While it isn't fair to judge a radio, a pickup truck, an air conditioner, or a gas grill entirely on what one reads from the newsgroups, what is posted can't help but to have some influence on what people choose to spend their "toy" money on.
>
>Myself, it's been nearly 8 years since my last "major" purchase of Amateur Radio equipment. As such, I am getting ready. I must admit that after my own experiences with Yeacomwoods, that my leanings are toward Ten Tec. This may be a mistake, dunno. But there does appear to be a widespread atmosphere of dissatisfaction with the Yeacomwood breed radios' performance, reliablilty, and service. Or is this just an illusion? A mis-interpretation?
>
>There is precious little information on which to base informed buying decisions when it comes to Amateur Radio equipment. The market is too darned small and fragmented to support a Consumer Reports type of publication. Really, can you trust the product revues? Do the multi-page, full color glossy ads tell the story? I think not. All we have to go on is rumor, heresay, usenet postings, and a limited sampling of dubious testimonials. It's a crap shoot. Hit or miss. To describe my last radio purchase as a coin toss would not be far from the truth. BTW, it was an Alinco - problem free for 2 1/2 years, a record for me.
>
>What is really sad is how some of this griping, whining, and complaining must look to an outsider. Surely there are many folks who read this stuff that are not hams, but may be thinking about it. After reading postings filled with venom and poison, personal attacks on people and companies, (not in this particular thread, but I have seen them) why then would they choose to become a ham? What's the motivation? This is not to imply that there shouldn't be debates and discussions concerning the relative merrits or faults of various

equipment or companies. It just shouldn't get personal. Use Email.
>
>To anwer the original question - No, I dont think we do. <G>
>
>KE1C
>
I agree, I am looking to get in the hobby of amateur radio. I have trying to learn what I can about the subject, but the info seems quite limited. I read Pop'Comm and Pop'Elec and many articles are not written for people who are novice like myself. You all use your jargon and slang which makes it hard to understand anything. Is there a good web page or somthing that can help me?
Also what is a Yeacommwood? Is that a lumping of Yeasu Icom and Kenwood or somthing else. Where do you find info on Ten Tec's? If all I really am really intrested in is being able to recieve (no premit to transmit yet) would an AOR AR5000 be a good choice? Or would a W-J H-1000 be better (for twice the cost)? Or what about WinRadio, I know by this thread that many people are against computers, it makes the scanner/reciever/transiever not as good for some reason, or not a "real" unit. What would be the best choice to get started in the listening end of the hobby? I don't want to buy somthing cheep that in two months I'll want somthing better, but I don't want to spend thousands for stuff that I will never need.
BTW: Dose anyone have any thoughts on a good TNC/MCP?
The Universal 8000 seems to do a lot of decoding, but something like HOKA Code-3 Gold (at 1/2 the price of the u-8000) does (in the ad of it) everything that the U-8000 does (except GOLAY and one other)plus auto-selection of the correct decoder.
All the products I have mentioned I really can't afford. Is there a lower cost alternative?
Thanks

Your problem description is sparse. Trying to solve it from afar is like giving a haircut by mail. It would help to know if the failure is an open or shorted winding and which winding. Is there anything else connected to the AC line that could produce voltage spikes? Many times a problem is related to a change that was made. Think back and ask, did I do anything between the time the rig worked okay and when it started having a problem.

There's 3 different models to cover that range and you can't "open" them
up to cover the wider range your requesting. Although the "U" model advertised
at 450-485 MHz coverage actually works from 430-485 MHz out of the box. Being a
Vertex dealer, my VX-10/U with the addition of the keypad (includes encryption)
is the radio I use day to day.

Burt,

The part that takes guts is to promote this hobby of ours in a positive
way,
bitching and moaning about how bad things are takes NO GUTS AT ALL and
that's
all I've ever seen from your posts. Nothing positive, no creative ideas
just good
ole belly achin.

Do you have guts Burt?

I have the same problem on my 1988 Chevy Corsica. It greatly affects
the AM band on my Sony in-dash CD player. Strong local stations are not
greatly affected, but weaker ones are obliterated when you give the car
some gas.

If the Delco radios do not experience this problem, I would assume the
noise suppression circuitry is inside the radio itself.

FWIW, I had the same radio in a 1982 Chevy Monte Carlo with no problems.

Anyone have any suggestions?

This sort of thing is one of the reasons that all equipment now sold in Europe has to be CE compliant- meaning that it not only must not emit spurious signals (similar to FCC type B), but also must not be *susceptible* to external RF fields, static charges, and so forth. In this respect the Europeans are ahead of us.

Message-ID: <330BE0FD.217C@scott.net>
Source record: 182633

I have just bought a new IC-T7A HI and received the software to interface a PC to the radio. They didn't, however, give the me serial cable... it costs about $50.00. Icom would only tell me that it interfaces off of the speaker and mic connectors and does require to be converted from TTL logic to RS-232 levels. I have a friend that is interested in helping me build the board to interface but, I need information on the actual connection to the HT. Does anyone have any information on this? I am willing to post any design that we come up with here on the newsgroup.

Thanks, Gary

4617. Tempo S1 HT overheating

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-19 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <5eebn0$9br@news.Hawaii.Edu>
Source record: 182636

Just bought a Tempo S1 2m HT for $25. The previous owner complained
of the battery pack running down quickly.

Upon attaching a 12vdc power supply I felt the back of the case
heating up; removing the back, a portion of the xmtr circuit
board was too hot to touch! The problem *seems* to stem from the
what must be the PA transistor, an NEC C2221 K92 - the under side
of the circuit board opposite from where the transistor is mounted
is what heats up.

Is the transistor case supposed to be soldered to ground?

At low volume, the HT draws 175 mA squelched, 190 mA with squelch open;
that doesn't seem excessive at all.

This overheating results during "receive". I haven't even tried
transmitting yet.

Regardless, the rcvr seems to work fine - heard a local rptr even
though the board was too hot to touch.

Note that even with the battery pack attached there was heating
in that area of the circuit board.

Any thoughts? Guess I'll have to call Henry Radio...

Jeff KH2PZ

P.S. I had another S1 over 10 years ago - didn't encounter any heating
at all, so I know this isn't normal.

>>Is there any way I can enter frequencies between 200 & 300 Mhz? The adms
>>software will not let me , but I can manually enter them through the key pad
>>and save them to memory.
>>
>>Jim

Although this is a wild guess, maybe in the WIN.INI file the 1st line
could be modified to allow it? (I have NOT done the freeband mod, so I
can't tell you if it works).

```
[FT-50 Programmer]
AllowAnyFrequency=0
Calibrate=5636
Com=2
TemplateFile=C:\YAESU\FT50\MYTEMP1.TPL
UseTemplate=1
DataDir=C:\YAESU\FT50
```

Maybe changing AllowAnyFrequency=0 to =1 will do the trick? Just a
thought..... Good Luck!!!

While the tpic of this thread makes intersting reading, there is
something serious here.

We are well into the age of everything electronic -- cash registers,
walkman, watchman, cell phones, cell phones with faxes attached, wirelss
computer printers, wireless internet connections, wireless LANs,
wireless WANs, more cell phones, garage door openers, electronic dog
collars, electronic cat collars, electronic ignition on everything,
wireless tracking devices for UPS packages, remote controls for VCRs,
TVs, stereos, and gas fireplace logs, etc., etc., etc. And it is
getting worse.

How long before someone innocently keys up an HT and crashes the entire
northeastern U.S. power grid?

4626. Alkaline AA battery shelf life

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-19 00:00:00 UTC
From: nfn04028@naples.NET
Message-ID: <199702190046.TAA08802@gator.naples.net>
Source record: 182651

Battery deterioration is essentially due to an on-going chemical reaction.
As such, it probably conforms pretty closely to the rule of thumb that
chemical reactions double in rate for every 20 degrees F increase in
temperature. If room temperature is considered to be 70 degrees and you
store at 90 degrees, the shelf life would be halved; at 110 degrees
it would be reduced by 3/4, and so on.

I suspect that other factors come into play when you lower the storage
temperature beyond a certain point, which may account for the mfrs claim
that refrigeration doesn't help much. Of course, you could take the
position that they are just trying to sell more batteries :-).

> on the net.I've never seen any
> for FTP'ing and NOBODY will give you a copy of any of it. Period.

Oh don't be silly. Many of the guys selling Mot portables give away copies
if you ask when you buy from them. Yes, they are *old* versions but they
work.

After trying to program portables (esp the Sabers) I totally gave up and
just
bring them into a shop to do. I have better things to do than make a
career
out of dealing with finicky and poorly written software which only runs on
machines that are many years obsolete.

Besides, the shop has the proper equipment to set the master osc freq and
deviation to the correct values, which is necessary for the radios to
operate
at their best performance. Shop around, you WILL find a shop that will do
it
for cheap (try a case of beer for the tech... got me programming on
demand!)

I am on my sixth MFJ-114 24/12 Hour Giant LED Clock and I have had
this one for about 3 days and it has already lost over 30 seconds.

I purchased a MFJ adapter cord to connect my KPC-3 to my Icom IC-02AT
and the adapter cord lasted just a little over 24 hours before it went
south and caused the IC-02AT to be keyed continuosly.

I am going to ship both products back to MFJ for replacements. I must
admit that MFJ does return ship the products very quickly.

4637. problem with EASILOG software - please help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-19 00:00:00 UTC
From: ceeam6@cee.hw.ac.uk
Message-ID: <E5upID.Fql@cee.hw.ac.uk>
Source record: 182662

Can anyone provide me with a solution to the following problem:

My dad uses Easilog V3.09 to keep his log book stored on the hard drive of his computer (the computer is a very old IBM compatible XT model) but wishes to change computer to a more modern PC. He has a friend who can convert the LOG file from his 5" disk to the required 3" disk.
The problem is, the .LOG file is too large to store on a floppy disk, and consequently cannot be copied from the hard drive to disk in order to transfer the data. Neither he nor myself know much about the software or computer, so can someone tell me if there is a way to get round this, short of having to type all the entries again on a new PC?

If replying to this, posting is OK, but please e-mail me if possible at ceeam6@cee.hw.ac.uk

Thanks.

While the 45 is a good GPS receiver, check out the Garmin-12XL. Far superior receiver (12 ch. parallel) and only $25.00 more that the $199 stated below. And no speed restriction like the 45, twice as many waypoints, more track points, proximity waypoints. I will lock when the 45 does not have any signal.

[Article crossposted from rec.radio.amateur.digital.misc]
[Author was Danny Stone NT]
[Posted on 19 Feb 1997 17:12:24 GMT]

I would like to replace my PK232MBX with a newer multimode
controller.

Specifically, I am interested in PACTOR. But I am also
interested in RTTY and AMTOR.

I have been considering the KAM and Paccomm controllers,
but I am open to all suggestions for a new controller.

I am looking for: 1. Good front-end filtering.
2. Full Pactor I support.
3. RTTY support.

I don really care about multi-radio support, packet, etc.

The HAL controller sounds interesting too (Clover and more)
- any comments on that?

I'm open to all opinions.

Tnx in Advance
danny

> always) spell it correctly.

Well you have the ability to laugh at your self and admit a minor error.
Are you sure you are a ham?

Ham radio defined:

There's just so much more in the world to catch their
eye than a bunch of farts who try to maintain their heirarchy in a
pseudo
secret society, refusing with a vengeance to pass the baton, for fear of
the
tiniest little detail of what's theirs being changed. Even if the change
is
necessary and beneficial to the hobby.

> I have seen you post that comment before. It makes absolutely NO
> sense! "If I have the guts"??? I am confused as to your meaning.

Hams are so gutless that none will meet me on the air to discuss my so
called outrageous views. It is not like I can hit them on the air.

> All kidding aside, my first impression is that you actually do have
> some serious problems. Do you so delusional as to believe that you
> could harm me by merely talking to me?

Maybe not you but most hams I could make look damn silly on the air, not
because I am smarter but I have the facts on my side.

I have the "guts" to talk to
> any human being in this world. Would your conversation be so inane
> that I would die of boredom?

Far less than a TYPICAL ham contact.

I had always imagined it would be an
> interesting conversation. Please explain this "guts" idea. I am
> willing to bet I am not the only one with this question.

You are the only one maybe with the guts to ask.

I have a friend who has a Drake L4B amplifier that keeps blowing what he calls the "large" transformer, which I am guessing is the plate xfmr. He has had the power supply gone through and replaced the relay. The new xfmrs last about a month, and no tube damage has been done when they go. Anyone have any ideas as to where to look for the problem? Any help will be greatly appreciated. Thanks, John N0EE

From a fax just received from Yaesu USA ...

(quote)
Date: February 19, 1997

To: All Authorized Yaesu Amateur Dealers

Subj: FT920

Dear Yaesu Dealers,

During the past few days, our headquarters in Japan announced our new FT-920 HF radio in the Japanese market.

This exciting new radio will feature DSP and 6-meters in a base station configuration at an affordable price. The FT-920 will be positioned between the FT-900CAT and the FT-1000MP and it will not be replacing any current models.

The FT-920 will not be available until late April, early May, just in time for the Daytom Hamvention. In addition, pricing and brochures will not become available until early April, 1997.

Thank you for your continued support of Yaesu products!

Sincerely,

(end of quote)

It is my understanding that a sample has been made available for type acceptance procedures.

More information will follow as it becomes available.

73 to all!

We use the garmin I think different model $139 at Walmart stores) in
business on a regular basis. We have a LOT of them in the field, and
the techs love them.

That is, indeed, helpful information. Thanks. Any idea at what low
temperature (storage, not operating) there begins to be a permanent
reduction in capacity?

Before this thread get's any further out of hand, I have a couple of
questions:

First of all, this clown is just looking for attention and enjoy's pushing
everyones buttons. He is looking for a response from a large group of
people, and he got it! He's no better than a jammer on your local repeater;
the more you respond to his drivel, the more he enjoy's it. If he is just
ignored, he will eventually go away. Don't give him the satisfaction of a
response, he has shown that he doesn't really care about the issues, he
just like to push your buttons!
Second, he obviously was interested in Amateur Radio at one time, since he
is an Extra Class, and continues to use his call sign in his sig at the end
of every message. I really wonder what his daughter, KA1VBQ thinks about
Amateur Radio? Does he really hate Amateur Radio that much? I don't think
so...His web page has several references, links, etc to Amateur Radio. He
even has some quotes paying homage to CW. Let's see, photo's of him and his
daughter with their call signs prominently displayed, callsign search,
links to Ham Radio info, and obviously very proud to be an Amateur Radio
Operator! At least that's what it looks like from this end!
So Burt, what's the real story? Are you AND your daughter going to give up
your calls? Are you going to continue this rediculous thread? If you feel
such hatred towards the hobby, why don't you show it on your web page? I
look forward to your response and hope you can quit playing this silly game
of yours.

4688. FS: YAESU FT-767GX; $1,100; MINT

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-20 00:00:00 UTC
From: Brian and Nancy Maynard-Dean <maynard@uriacc.uri.edu>
Message-ID: <330CF7FC.6C37@uriacc.uri.edu>
Source record: 182445

Greetings!

I have for sale a Yaesu FT 767GX HF rig with 2M all mode module. Absolutely mint, and very well cared for. Has built-in antenna tuner, TCXO, digital SWR and Power meters, crystal SSB and CW filters, FR processor, AM filter, and FM. All works perfectly. Comes with built-in power supply, original box, mike, and manual. This rig has gotten many complements on audio and signal strength over the years - I am buying "down" to a mobile HF rig (time to go camping!). I would also trade for a Kenwood TS-570D (plus $200 cash from my end).

I am asking $1,100 for this gem, and will pay shipping in the lower 48. Sorry, but I would prefer not to sell the 2M module separately at this time (it makes the rig special to some folks!).

If this is your second reading of this posting, I apologize. I am new to this forum.

Please e-mail queries... Brian Maynard, K1NW
MAYNARD@URIACC.URI.EDU

Burt, Just what are you doing to make ham radio more interesting to the young folks. What are you doing to bring more young folks into the hobby and keep them there??

It is real easy to sit back and spout a lot of hogwash about how boring, and how stupid and all of the rest of the blah blah blah that I see comming from you.

Have you started to put together a high speed packet network, at a speed high enough to use the internet browsers on? If computers interest the kids, Add computers to the radio, only do it at a speed that will hold their interest. If you come to Dayton this year look me up. The Consolidated Electronics Booth as I work for them and get stuck there for the three days. I will introduce you to a friend of mine, in fact several. One started the 19k2 network around here on 440 several years ago. He and I along with hams around the country are trying to get 900 megs off the ground with spread spectrum. All to get more speed so that ham radio can compete with the internet. Another friend is a scout leader, Their class this time around has over 40 students, all looking for that ticket as he has made ham radio interesting to the scouts by arrainging field day out at the scout camp. He has set up a satellite station to work the birds with the boys right there.

Ponder those things Burt, You claim to be an educator, yet you cut, slice and condem rather than teach and enhance. I have kept my silence for a long time now and read what you have said. Perhaps I should continue to keep it, but I feel that someone has to point the truth out to you as you seem to be oblivious of it. There are many of us out here trying to put the ham back in ham radio and make it fun again, both for us and the young folks. Please quit lumping all hams in one heap and cutting us down. You are the one that gives ham radio a bad name to the non hams that read the news groups that you post your tirades to.

Fred ke8tq ke8tq@n8acv.#day.oh.usa.noam

Come to Dayton this year and stop at the TAPR booth to say hello......

Here is the correct Yaesu Japan WEB PAGE:
http://www.yaesu.co.jp/news/index.htm

Basically the radio is triple conversion with the 1st if at 69MHZ, the second at 8.2 mhz, and the third at 455 mhz. The DSP appears to be after the fact "AUDIO DSP". This is similar to the KENWOOD TS-570S. Also the rig has no built in power supply and requires 13.5 volts at 20 amps. Their is a built in antenna tuner that covers all HF and 50 MHZ bands. The web page is predominately in Japanese but there is enough English to get the above facts. The price of this radio must fall between the Kenwood TS-570S and the Icom 756. My guess is it will be approximately $2100. The Icom 756 goes for about $2350 and the Kenwood TS-570s at about $1800. The Yaesu will fall right betwwen them. Also, there is no spectrum scope like the Icom 756. The yaesu will have DUAL inband receive capability. You will notice from the picture that the Yaesu has a "IF SHIFT" control and AUDIO DSP SLOPE TUNING like the Kenwood TS-570D. The Icom 756 has "IF SLOPE TUNING" and Audio DSP for white noise and notch filtering. ALL three radios has 16 bit DSP processing at different speeds (pretty close though). For me to purchase the Yaesu FT-920, it will have to cost no more than $2100 US DOLLARS or else I would have to buy the Icom 756.
Cheers, NS1R Steve Hershman

Hello Robert,
Heres' another 2 cents worth. I had a rig that had similar symptoms. It

was a t/r relay contact that was intermittantly resistive. If the 870 has one, give it a tap when the signal drops and see if it jumps back up. Hope that helps. Good luck.
George

Hello Everyone,
I have an ALINCO DR-570 Twin band mobile radio, that I have had for four years, for sale. Puts out 45 watts on 2 M and 35 on 440. Operates from 130-170 Mhz. and 420-470 Mhz. Is in perfect working condition. Selling it because of the lack of use since aquiring a dual band hand held. Asking $325...that includes radio, mic., mobile bracket, manual...and shipping.

Call: 770-487-0208 between 9 am and 11 pm. or Email : danielg@avana.net

I live less than a mile away from a pager transmitter which transmits around 153.250Mhz.

A local amateur less than 75m away from me was using a Kenwood TM-733e, a collinear with 6.5dB gain and a short low loss feeder run.

The pager completely wiped out signals on 2m making the radio useless. This is because of the wide open front end of the 733e but does anyone know if the Yaesu FT-8000r copes any better than the 733e? They both have wide open front ends but is the Yeasu's superior?

I don't want to pay 475 pounds for a pile of junk!

Greetings. I am looking for a solid state RF preamp with variable gain to about 25dB or so, and automatic switching on and off, for use with a Kenwood TS-430s. Therefore, the amp needs to work from 1.8 to 54MHz, and needs to handle at least 150 watts or so SSB, CW, and AM. 12VDC operation is preferrable. If anyone can steer me to one, or has something like this laying around gathering dust, please let me know.

TNX in advance,

Doug Gavilanes, N6XQY

>Because I am public service minded person.

I'm glad you said this Burt. The Boston Marathon will be running
on April 21st. We will need additional volunteers. I will be part
of a group using APRS software to keep track of emergency
vehicles. I believe this is a school holiday, so you should be free.

Since you are a teacher of electronics, you should be able to
throw together a tracker if you want to help even more. Simply
interface a GPS unit supplying an NMEA sentence to a TNC
of your choice. Transmit on 145.79 (you can use that 2M
equipment in your closet) . The Shareware is downloadable
from various web sites.

If you don't have, or can't build, a GPS unit, just keep the
serial interface of the TNC free and we can program it with
a laptop.

Maybe we can even put your moped to work!

Anyway, Thanks for volunteering!
73,

Steve

I don't agree with Burt's position, Bruce, but I haven't seen any engineering study which would indicate that the SS signals of the LEOs would adversely impact amateur operations. Frankly, I think their signals would have negligible impact on most amateur operations, including most amateur satellite operations. There might be some impact on traditional EME operations due to the slightly raised noise floor, but that's a very tiny part of amateur activity on these bands.

The real problem is the other way, with the relatively high power narrowband amateur operations causing interference to the LEO's terrestrial users. Due to the near-far effect, nearby amateur operators would overwhelm the SS coding gain and cause interference to the receivers of terrestrial users of the LEO services. That's where the danger to amateur radio lies in this proposal.

Once they have the camel's nose in the tent, and have established an economic interest in the spectrum with a large user base, the interference to their operations by amateurs would serve as an excuse for them to go back and request exclusive access to the spectrum, IE kick the amateurs out.

Of course if amateurs also adopted SS systems, and practiced proper power control (required by amateur regulations, but ignored in amateur practice), there would be negligible interference in either direction. But amateurs appear unlikely to do that voluntarily, so conflict would

be inevitable. And amateurs don't wield either the economic or political power to prevail in such a conflict.

We may win this time, and I've dutifully filed comments supporting amateur radio, but ultimately we can't continue to warehouse spectrum. The pressure to effectively utilize the spectrum will continue to mount, and unless *we* start using it effectively, others ultimately will.

This is deadly serious. The FCC has made it very plain that they will no longer condone warehousing of spectrum. They are in the process of forcing broadcast to give up the spectrum it has warehoused. Congress has mandated that warehoused military spectrum be released. And that leaves amateur radio as the only major warehouser of spectrum left untouched. That can't last long.

I really hate to see this stuff spilling out of its normal bucket, rec.radio.amateur.misc. Please take a look at the list of newsgroups you're posting to before you click the "send" button and see that it's limited to the appropriate group. (I personally feel there *is* no appropriate group for this sort of childish tantrum, but most of us have abandoned rec.radio.amateur.misc to it, so please be satisfied with keeping it there.)

Thanks!

Roy Lewallen, W7EL

4714. Increasing HV on AL1200 - higher output?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-20 00:00:00 UTC
From: no9z@prairienet.org
Message-ID: <5ei6qo$pbl@vixen.cso.uiuc.edu>

Has anyone tried increasing the high voltage on an ameritron amplifer al1200?
Looks like going to the 220 volt tap would increase the high voltage about
350 volts. Mine does not want to run up to the 1500 watt limit.

Your input appreciated.

Lynn

Terry, the 2980 is a base station. I have it hooked up in my bedroom with a Boomer 500, and a Maco 5/8 antenna mounted on a tripod on my roof. I have had very good results with it, talking to my brother who is located approx 30 miles from me. The one minor problem is drift. I generally turn it on about an hour before I am ready to talk and haven't had the problem. However, if you turn it on and immediately start talking, you'll find yourself adjusting it every few minutes.

Kenwood's Ham-Windows is the software package that does it all for your ham station. It logs, it operates your rigs, it does the digital thing, it shows you where the broadcast shortwave stations are and what time in English, It keeps the DX countries list and maps show where that country is, CIA World Database tell you all you ever wanted to know about the country your working, beam headings from YOUR qth, and on, and on, and on, etc. You need a 386 at least and 4 megs, reccomend 8 megs of ram runs under windows 3.1, and 95. 4 disks and manual, 65.00

>the Boston area actually does a lot of good.

Even Better Burt! Since APRS is digital (but you knew that) you need
not hear any of that horribly inefficent blabber. Just objects on a computer
screen.

BTW, As a former police dispatcher and PO (I even worked in Yarmouth,
hey, maybe I arrested you!) I understand your comments about communication.
But it's easy to critisize from the armchair, isn't it? I have been in radio
communication situations in which life depended upon good skills. Since
a lot of that experience was on the Cape, maybe it was a life of someone you
knew. I don't take this stuff lightly.

I still have a cottage in Dennisport BTW (off Old Wharf Rd.) I even have a
weather station there you could monitor if you were on APRS.

Source record: 182524
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

It is true the EXPENSIVE Icom interface is just a standard level converter. The circuit can be built for about $2.00 in parts. The Icom uses +5v and gnd for signals while RS-232 uses +12v and -12v.

Standard practice is to use 1488 and 1489 level converters to go from +5 to + and - 12v RS-232. I have found this is not really needed.

I used a standard TTL hex inverter instead. The Transmit Data line on the rig goes to one input on the inverter and the out put goes to Rcv Data line on the computer. The TD line on the computer goes throuh a 1k resistor to the input of the second inverter. A 5v zener diode is also connected to the input of the second inverter. It serves 2 purposes first to limit the +12 to +5 and to conduct the -12 to ground as not to blow the inverter. The output of this inverter is connected to the Rcv Data on the rig. And ground goes to ground.

I have used the method to go fromm TTL to RS-232 for years and it works well. Granted I would not use it for 57K Baud but I have used it up to 19.2K Baud.

I hope this is clear enough. If not send a request and I will put it into schematic form.

73,
Bill WD2AEV

<SNIP>

Good comments. This should be of concern to anyone who is confused on
the issue of whether the 756's DSP is really IF or AF.

I think your comment about DSP group delay may be off the mark
however. The Kenwood 780 handles Auto-Notch via IF DSP within the AGC
loop and without any AGC stability problems. If Kenwood can do it,
why can't Icom......

Well, I admit that my profession is computer science and radio is
primarily a pastime for me, but that doesn't lessen my ability to
read Volume 47 of the CFR and understand the reasons for type acceptance.
I don't need to own a service monitor and get paid to tweak radios to do
that, do I?

If you're trying to bring my credibility into question, please
explain why. Was my comment about the basis of type acceptance
incorrect? Hmm?

;-)

Richard,

Pursuant to your inquiry, I've had a 756 for two weeks. It is a superb
radio. Enormous internal flexibility and with the spectrum scope set
to 100kcs each side of center freq., one is allowed to know precisely
what is taking place on a band. This feature can be combined with the
band scan feature for extraordinary monitoring results..

It would appear that postings critical of this radio are based on
overt prejudice and not irrefutable fact. I believe this radio and
it's attendant scope will have inestimable positive impact on future
designs

4743. FT-920 OBSERVATIONS !!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-20 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>
Message-ID: <330CEC2C.7803@ix.netcom.com>
Source record: 182538

After looking at the Photogragh at
http://www.radiosales.demon.co.uk/index.html
several Hams have sent me interesting comments about the FT-920.
It appears that the FT-920 is more like the KENWOOD TS-570S than the
ICOM 756. Notice that the Yaesu FT-920 has only a IF SHIFT and has
DSP SLOPE tuning just like the KENwood. I bet the DSP SLOPE TUNING is
"after the fact". I would perfer having "slope tuning in the IF STAGE".
These are only some of the comments I got from the readers of my
postings. I have not seen any specifications on this radio.

I filed electronically last year with TurboTax and it worked
surprisingly well. As far as trying to print it at work, it's a huge
file and I doubt you'd survive the frustration since I doubt it's a
simple as it seems due to all the forms that are stored electronically.

4746. Anyone have the Standard Radio C5718DA's optional front panel to sell??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-20 00:00:00 UTC
From: Jerry Bransford <jerryb@cts.comnospam>
Message-ID: <330CF417.2051@cts.comnospam>
Source record: 182541

I have Standard Radio's C5718DA which is the 2m/440MHz 50w rig with all the controls on the microphone. I didn't buy the optional front panel because I had to mount it in the trunk and just use the controls on the microphone. The microphone controls are 'ok' but not great.

Now that I have a different vehicle that will allow me to mount the radio in a more usable location, I'm thinking about buying the optional front panel with the display and controls to make it easier to operate.

Does anyone have experience with this front panel they'd care to relate to me? Better yet, does someone have one to sell me? Please reply directly if you do.

73,
Jerry Bransford

From: jgarver@ichips.intel.com
Message-ID: <5eigvk$5vc@news.jf.intel.com>
Source record: 182543

Sounds like a dirty relay, a problem that the TS-430S and probably other
Kenwoods had. If you hit the PTT button momentarily and the problem goes
away, I'd suspect a relay. I don't know how many relays the TS-870 has
in it but there are probably a lot of them.
Kenwood's fix for the TS-430S problem, which was in the band change relays,
not the T/R relay, was to apply 12 volts to the antenna connector in series
with a low value resistor and then cycle through the bands. There was a
more permanent fix that involved circuitry which momentarily applied 12 V.
to the relays at every band change. These cures were supposed to burn off
the relay contact oxide.
I think that the 'antenna tuner receive' function on the TS-870 is a real
benefit, BTW, particularly on the lower bands like 160 and 80 meters.

From: kral@hpl.hp.com
Message-ID: <5egant$7l4@hplms2.hpl.hp.com>
Source record: 182547

So here's a question for ya'all...

The FT-50 is 5W output at 9.6v, and 2.5W output at 6V.
The 9.6v battery I have is 600mah.
The 1100 mah battery has an ugly form factor.

My wife has the VX-10 with an 1100mah battery that is the
same size as my 600mah battery, but its 7.2v.

Here's the question:
If I were to use the 7.2v battery on my FT-50, what would its
output be? Does the output fall off in a linear fashion, or does
it just toggle down in discrete steps?

>Hi, I'm wondering if there are any FT51 owners that would like to
>share their opinions of, and experiences with this radio< good AND
>bad>...

My personal experience with this radio is very good. In comparison to the FT-50, ehich I also use and like, here are the advantages in my opinion...

The FT-51 has dual receive, which the FT-50 does not. "Priority watch" on the FT-50 works OK, but doesn't look for activity on the sub-channel often enough except in dual-VFO mode, which is a little cumbersome. The FT-51 is the ONLY HT I have used with a good alphanumeric display system. The FT-51 allows 8 chars per channel, which are displayed along with, not instead of, the frequency information. I also find the FT-51 performs better in high RF areas, I guess because the FT-50 is so wide. I never use DCS on my FT-50, so I don't miss it on the FT-51.

The only complaint I have about the FT-51, and it is minor, is the rubber protector on the top covering the mic and earphone jacks. It does not fold back out of the way easily when using a speaker-mike; tyou'll see what I mean wwhen you try it. That's a small point, but it shows how picky I had to get to find something wrong with this radio. You won't be disappointed. Get the ADMS programming software - that's the only "must have accessory" I would say.

regards, Don (KE4KYO)

4759. Alinco DR-605 - Comments...

Greetings All,

I'm wanting to buy a dual band 2m/70cm radio and have decided that the Alinco DR-605 suits my needs and more importantly my budget.

I the past I have heard some negative comments about Alinco and the quality of their radios, but reading recent magazine reviews, all writers appear favourable towards this radio.

Just wondering if any of you in Usenet have this radio and your comments on it. Particularly interested in your comments on construction and performance of the radio in rejecting strong out of band signals that are near by (namely pagers!)

Since my newsreader isn't super reliable, could you please direct your response to me via e-mail. <vk6hrc@amsat.org>

My only complaint is the WIDE AM filter. 9khz is too wide to be of any use for
even occasional SWL use. But for the bucks, a great rig.

>FT-50 has only one.

Also, the FT-51 has excellent apphanumeric capabilities. You can assign a label up to 8 chars to each memory channel, and this is displayed along with the frequency data. The FT-50 allows only 4 chars, and this replaces the frequency display when used. That's not useful to me. I own both, and the FT-50 is very nice. But the FT-51 is much preferred (by me) for a number of such reasons.

Hi all,
I have an H.P. 141T mainframe with 8552b, 8553b plugs, good for 1Khz to 110Mhz in good shape, works well. Have no manual never needed it but they are available.
Tucker is asking the outlandish price of $2095 for these units I'm not that greedy I am asking $1000 or B.O. or will entertain a trade for service moniter good for at least 500Mhz don't need fancy just reliable must have pl, dpl, ability spectrum would be nice will consider all offers.

Thanks '73
Tracy

>Ah, yes, and if you look at the figure on page 6, the "E" has a jumper
>at W301, while the "E3" does not,
Nicely spotted Bob!
As the green wire is in series with D308, cutting the wire equals removing
D308. That leaves us with an identical diode-matrix for the E2 and the E3,
which have different transmit ranges.....

In reality it was tested that the difference between E2 and E3 is in diode
D304: with D304 it is an E2, without it an E3 (which is equal to E9).

Sigh.... Am I suffering from dyslexia or what is going on here?....

There may be a NOSPAM. in front of my E-mail address.
It is there to fool machines, not people.

The RCP-2 software is available for download for the TS-570D/S. The RCP software for the TS-870S is suppose to be included with your radio when purchased. The software for the TS-870S is not available for download on the net.

Jim, I appreciate the response. A capacitor across the electrical circuit would seem reasonable (but, it better never short out, I don't know what protection is needed from constant exposure to gasoline).

I have contacted several GM dealers and fuel pump manufacturers. They don't seem to know anything about electric fuel pump noise for hams or CB'ers.

A Cadillac parts man said that Cadillac solved the problem in late 80's or early 90's by replacing the pump with an different design. I did not ask him who the manufacturer was. Contacts at AC Delco denied any knowledge of a "fix". A ham radio operator who works at a Cadillac dealership said that the problem is widespread (affecting Fords, GM and Chrysler). Only Ford offers a RFI filter that can be installed in-line inside the gas tank.

I have posted my 940/sm220BS-8 combo for $1300.00 plus shipping. The SM220 is sold. I am going to offer the 940SAT $1050.00 shipped to C.U.S.
The radio is in excellent condition - has small scratch above power switch.
It has the International Radio 2.1khz SSB filters, the IF10b computer interface and the Giehl memory enhancement chip. Comes with operation and service manuals .Everything included when I purchased the rig two years ago. I am not going to wait too long - It will go to the dealer as a trade in if it is not sold by the weekend..

The first money order for $1050.00 gets it. !!

Tnx es 73 ---- WA8DXK --- Russ 216-356-0839

I have an Icom IC-751 HF transceiver I would like to trade for an Icom IC-471A or a good quality communications receiver covering up to 2GHz like the R-7000.

IC-751 has narrow filter, hand microphone and internal AC power supply. Rig is in excellent shape and rarely used. If you have an IC-471H, to trade, I will throw in a brand new Tucker T-3000 antenna tuner.

4800. Yaesu FT-50R Battery Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-20 00:00:00 UTC
From: rhys@ix.netcom.com
Message-ID: <5eg2gi$59u@dfw-ixnews6.ix.netcom.com>
Source record: 182639

Hi Gang --

Would love to get some help on this one. My FT-50 is eating batteries. I've gone through three so far and the original wasn't even a year old.

What happens is after about a day or two the battery won't hold a charge. It never gets too hot to the touch and the NC-60 appears to be putting out about 15 volts. I've also been using it in the car charging from the car system but again reads 15 volts and battery never seems to get hot.

only thing I can think is that some regulation circuit in the HT is out or possibly the thing drains the battery even when it's off but I don't think even that would do it.

ANY IDEAS????

Any of you had similar problems... I'd love to hear from you.
Thanks for the reply.

I let the battery run all the way down before giving it a full 15 hr
charge. In my vehicle, I do not plug it in wiith the NiCad attached. I
have the battery "shell" as a mount in the vehicle and clip the radio into
it before plugging the lighter adapter in (going to wire the shell to the
elec. system one of these days). If you don't have the battery shell, you
can remove the battery and plug in the cord without prematurly charging
your battery.

I have only had mine for a few months, but no problems.

Richard:

In short YES. The spectrum display is really nice. I can look at the display, and see that a signal is over there (you can adjust the display from 12.5 to 100khz). You then move over there and here the new signal. It is as close to realtime as you can get with an LCD. I don't know how they do this, without a separate receive circuit for the spectrum analyzer. In fact, I have an HP spectrum analyzer that I used to use for this very thing.

As far as I'm concerned, the crud that you have heard about the 756 is totally unfounded. I took my HP analyzer (with attenuators), and looked at the transmit cleanliness for instance, and at least MY 756 is very very clean. I heard also about other weird stuff from others, that I have not seen with mine. It sounds to me like envy.

Anyway, the spectrum display is incredible, and I love it. I love the rig all the way around.

If you charge the battery, then remove it does the same thing
happen? This will show if the radio is causing the discharge.

Hi Damien/Linda,

For what it's worth I've never seen an on-glass 27-30MHz antenna that performed adequately.

There simply isn't enough capacitance through the glass to allow a frequency that low to couple very well.

I suspect a large antenna whip could possibly break the glass too!

Could somebody please post Burt Fisher's home address and telephone number on these newsgroups he keeps crossposting to so we can call him (like maybe when I'm reading the news at 2:00 A.M.) and tell him what we think of his abusive drivel and/or mail him dead rodents and such?

I read somewhere about some guy being a public pain in the ass and being subscribed to like 300 "bill me later" subscriptions to everything from porn magazines to Forbes. Surely somebody out there has a similarly wonderful idea about how to deal with Butt Fisher. If he wants to make himself a public figure, then we can treat him as such, you know posting details about his formerly private life, what kind of undergarments his wife wears, etc. I'd suggest to Butt Fisher that life as a private citizen is a little nicer than life as a public figure. I think a good argument can be made that his repeated controversial postings on USENET already make him a public figure. Thoughts?

This radio is a good CB. The HR2510 is a better CB.

Neither of them can be considered serious Amateur radios.

If you don't believe me, then you've never lived with a decent HF rig!

Cheers!

Hi Mike,

My TS-850S/AT does the same thing, it did it new out of the box. Never seemed to hurt anything, and it is very slight, and has never increased in "play", so I never worried about it.

Take care and 73's,

Roger,

There have been quite a few postings here about lightening protection.
You can review them by using the dejanews.com search engine.

Keep in mind that you need to think about this problem in terms of AC vs
DC. Since the feedpoint is low-z, you could put a heavy duty RF choke
across the feedpoint. As long as it's Z at the operating frequency is
much larger than the feedpoint Z, it will not disturb the match. The RF
choke is hi-z at RF (AC), but low-z at DC. It won't provide total
protection, but it will definitely help and also drain off static
charges.

Some people could constantly mail bomb his account until his ISP cuts him off. Of course, he could switch to another ISP, and then the mail bombing might start again. However, I'm not recommending such a thing....

But..., its real easy to set up a cron jobs under unix to send it a huge 100k message every five minutes. If 50 people started doing that ... well, you get the pictures.

ONCE in a while you'll find an unassembled kit advertised by an
individual in various ham radio publications but SADLY, Heathkit has
been defunct for many, many years now. Boy do I miss building
Heathkits, they were lots of fun!!!

4817. Kenwood TH-315 mic problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-21 00:00:00 UTC
From: jlco@jps.net
Message-ID: <330dba9d.694404@news.jps.net>
Source record: 182356

Thanks for reading.....
I have a TH-315 HT that does not work with a speaker-mic. I have tried 2 different ones (MFJ 286 &287) - these both work on my Kenwood TH-31B HT. There is no sound from the speaker and when keyed, it goes to transmit for about 1/2 sec. and then when keyed down, sound will come from the speaker. I don't know if the previous owner modified the jack. Any suggestions???

Also, since I have no manual, I don't know if I can run 13.8v into the upper power jack.

Thanks in advance,

Jeff KN6GI

Like the subject... is Heatkit still around? If so, are
they still "kits" that you can put together? And are they any good?
Please email me back at Krisik@aol.com Thanks alot! PSE EMAIL 73 KF6DSW
Ethan

Ethan,

I never jeard of "Heatkit", but Heathkit is long gone. There are still
other excellent kit manufacturers around. Ten Tec has a T-Kit division
that sells everything from accessories to complete 2m, 220mhz, and 6m FM
rigs with modern features. You can get info from:

http://www.tentec.com

For more bare-bones type kits, and small accessories, there's Ramsey
Electronics, and for HF equipment there's G.M. Howe (imported from the
U.K.) Both advertise regularly in major ham magazines.

Hope this was helpful.

I am looking for a radio modem- actually a *lot* of radio-modems-- about 100,000 of them. While I relize that what I'm looking for is somewhat different than your typical ham packet setup, it is related, and I'm hoping that some readers of this group might know of, or even be, a potential source for this device.

I'd like to emphasize that this is a real-live, large order- 100,000 - 500,000 units over a few years, with a bare minimum initial order of 10,000 units.

Preliminary specifications are below.

Any information would be greatly appreciated.

Ted Grant
tedgrant@earthlink.net

Description: Radio-modem, in OEM-board type format,
including RF section.

Data Rate: 2400 baud minimum
Modulation: negotiable
Frequency: 450 - 470 MHz (multiple frequency, 25 kHz channels)
Deviation: +/- 4.5 kHz
Range: 16 mi with line of sight,
Note: Antenna to be used will be something like a quarter wave dipole, but mounting restrictions mean SWR and effective output will less than ideal.

RECEIVER
Sensitivity: -110 dBm

TRANSMITTER
Transmit Power: 5 W [nominal. Other power OK if range requirements met]

In case you missed the number of birds...
From Edupage:

TELEDESIC LOOKS AT SCALING BACK
Teledesic Corp., the high-profile, $9-billion satellite communications project backed by cellular magnate Craig McCaw and computer mogul Bill Gates, is exploring options to scale back its 840-satellite system, beginning initially with just 288 "birds." The satellites will occupy a low-Earth orbit, 400-700 miles above the Earth, circling in 12 orbital planes or "rings," with 24 satellites in each ring. A spokesman for Teledesic says the company "has not altered" its original plan, but may start off with a more modest arrangement. (Wall Street Journal 19 Feb 97)

```

Harlan,

Apparently you ignored the above warning about unsolicited advertizements via email,(which I put at the top of ALL of my newsgroup messages). Plus, because of my "anti-spam" addressing method, you had to KNOWINGLY and WILLFULLY go out of your way to send me this crap!

Sending unsolicited advertizing via EMAIL, unlike via newsgroups, is ILLEGAL in the USA and therefore a complaint is being made here and now to the admin of your ISP demanding that you be kicked off of their system and/or be severely penalized in some other way.

And HELL NO, putting that bullcrap message at the end telling me how to do a "remove" request DOES NOT make it any more legal! If I receive ANY further messages from you whatsoever via email I will also refer you to my collection agency for a message-handling fee of $50.00 per message and that will retroactively include the advertisement I am not responding to. Don't even reply to this message because that WILL be counted!

If I wanted to read this bullcrap I would read your MANY posts in the public forum of the rec.radio.* newsgroups where you can post whatever the hell you like, but THIS is MY EMAIL BOX and NOT a public forum! For your disrespectful lack of consideration I am recommending that everyone buy from someone other than you when they need any such stuff, because you have proven that people are nothing more to you but a fast buck and nobody wants to do business with anyone who has no respect for his prospective clientel! That is why I've also copied this message to the two newsgroups listed in the header above! Let it be known, if you want

to play the part of an incosiderate lowlife bastard with me, I will treat
you like one and I will enjoy showing everyone the quantum regard you have
for people who might have done business with you.

In other words, up yours, bub!

And to anyone else who wants to pull this crap with me, you WILL be dealt
with the same way, that's a promise. And I HOPE you dont' like it!

If you want to advertize you do it in PUBLIC forums, like on your own
webpage or in the newsgroups,(named in order of appropriateness).

Get a clue! Don't tick off Ted, cause I WILL put a foot in your behind!

All power to the people!

Another one that may be as good or better and sends a free catalog is called RF Parts located in the San Diego area. Their number from anywhere in North America is: 1-800-RF-PARTS (1-800-737-2787) They usually have fair prices and have many hard to find RF devices.

It looks okay but one thing I dislike alot about it is that it is a portable rig, not a mobile rig. It is not made for in-dash use, as is made obvious that they put the antenna jack on the face of the rig,(which is actually the top-side), and to me that's idiotic, but then I'm not into portables. If it was an in-dash or under-dash mobile you were looking for, the FT-290R isn't that. If you want something you can strap over your shoulder like a purse then get the FT-290R. The Yeasu catalogs show no in dash version of the FT-290R either and that sucks. If it did come in a mobile version, minus the battery compartment and with the antenna jack in the back where it belongs on a mobile rig, then I'd buy one.

Anyone know of a steady source for M-2057 tubes. I have tried Ocean City, RF Parts. No Luck.

Actually Heathkit is still around. They've just been in the education
market for a while.

To all who have seen Burt Fisher's relentless attacks in various newsgroups:
Don't feel alone. He got a new Packard Bell for christmas and discovered that he could try to force his views on more people than if he just stuck to the classroom full of ninth graders he's trying to teach broadcasting. I wonder if he still needs help getting rid of that bus mouse he doesn't really have?

This is true. You can't see a thing on his web site unless you let him execute Media Player on your machine. I've got a problem just allowing executables being sent to, and run on my machine to suit someone elses whim. With this guy's attitude, who knows what you'd end up with.

Hi Walter,

these tubes are not hard to get. AES Antique Electronic Supply in Tempe,
AZ has it for sale for $ 6.20. Phone 602 820-5411, fax 602 820-4643.
The ECL86 is a direct replacement I have used it myself.

Folks,

While I agree that the Icom interface is overpriced, you have
to consider how many they sell a year, the manufacturing cost,
stocking, shipping, and all the other overhead that goes into a
product. Yea, sure, it has about $10 worth of parts. What's the
assembly cost? How much does the box cost? And the manual? What
about the support cost that's built into the product?

OK, maybe it's not worth $125, but it sure can't only cost $10
bucks, either.

Message-ID: <330d9ddf.1523451@news.rmi.net>
Source record: 182398

I am having a problem with an acoustical buz from the power supply area of the 30S-1. I thought at first it was the main 8hy choke and replaced it. Problem still there. I finally removed the 3B28's and the buz is still there. This problem only happens in the SSB mode. In the CW mode the buz almost disappears. The main plate transformer is a Peter Dahl transformer. Has anyone had a problem like this with a Dahl transformer and is there a cure?
Thank you in advance for any advice. Its a great amp but the buz is anoying.

> portable environment (without major weight)? i.e. back-country search
> and rescue?

I suspect that the success or failure of such an endeavor is mainly
a function of how much BATTERY weight you are willing to lug around.
I have heard that it is possible to tweak the radio to boost the output
to around 6 or 7 watts, but that's not a big enough difference to risk
premature component failure (in my humble, uninformed opinion).

If you need amplification of both 2M and 70cm, you could hypothetically
add a Mirage BD-35 amplifier, giving you 45 watts VHF and 35 watts UHF.
But it is stated to require 7 amps at 13.8 volts.

If 2M operation is adequate, a Mirage B-34 or B-34G (the latter has a
preamp on the input) would give you 35 watts out at a power drain of
4 amps at 13.8 volts.

Of course, those devices are probably a bit on the bulky side, since they
were intended for operation in a vehicle or in a base station location.

I just came across a 2M power amp kit in a place I would not have ever
expected, a mail-order outfit called JDR Microdevices. They sell lots of
types of electronic components, but most of their business seems to be
in computer-oriented components and accessories. Their part RK-PA1 is a
35-40 watt amp on a small circuit board -- you get to fabricate your own
case, so you could make it quite small. Power supply is 12-14 volts at
"maximum of 5 amps". You may want to check out their web site at
http://www.jdr.com for info.

Note, I have not used any of these devices, so I can't vouch for them
personally. I can say that I have bought a lot of stuff from JDR for a
lot of years, and have always had good luck in my dealings with them.

Then you need to find a 12 volt battery that will put out 4 or 5 amps for
a long enough period of time to make it all worthwhile. I would imagine
that a lead-acid gel cell type would be the best way to go there.

Good luck!

I show 30 9th graders ham radio every year on the air, they also see the
ARRL self serving video tape and I talk about the hobby spewing the
company line.
And you are doing just what?

> There are many of us out here trying to put

There may be "many" as you say but overall these many are a very small
percentage.

Overcharged? I don't think so. If ICOM were to advertize the interface for $125, you order one and then find that they have charged your credit card $200, then you have been overcharged. If you know that the interface is priced at $125 and still buy it then you have no position to gripe. The interface is a simple one chip device (MAXAR 232) level convertor that has been described in a number of publications over the past ten years. It has been described in devices ranging from rig/computer interfaces to RTTY TU's. The parts are available from DigiKey or any number of other suppliers. If you don't want to pay the ICOM price you have two other options. You can build it yourself ($15-$30 in parts), or you can order one from one of the other suppliers that have decided to compete with ICOM. Personal Database Applications (770-307-1511) markets an interface that is built by W1GEE. The interface sells for $50 plus $3 shipping. The interface is available in several flavors depending on rig manufacturer. The bottom line is that the ICOM device is a quality piece, and Gary Fiber (who does a great job of support of ICOM products via E-Mail) has no reason to explain or apologize to anyone on this USENET group for ICOM's pricing policy. Gary does not establish the ICOM product pricing.

[Yaesu sells there own in-ear mic and it and others like it are not
[compatible with VOX to the best of my knoweledge.

You are correct. There is not enough "change-of-state" to trip a VOX
circuit from any of the ear mikes available, without also having them
trip every time you swallow or click your teeth together.

[Steve Zettel (zettel@libby.org) wrote:

[: My application is for VOX operation under close-fitting snowmobile,
[: ATV, and bicycle helmets. High ambient background noise and wind noise

[: problem.

You can easily make a PTT switch to Velcro to your handlegrip, or buy
one of them from an aviation supply house for about $10 - 15.

4846. HELP: VERTICAL ANTENNA & LIGHTNING!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-21 00:00:00 UTC
From: wy491@freenet.victoria.bc.ca
Message-ID: <856539579.13873@dejanews.com>
Source record: 182411
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello,

I would like to install a vertical antenna that I read about the other day, but have some concern about lightning danger.

The antenna is a vertical made from 1" diameter copper piping. The vertical portion will be about 16' and will be attached to either the roof or side of my house. The center conductor of RG-58 coax will connect to this copper pipe. The shield will be connected to a radial ground system made up of copper wire buried about 1 foot.

QUESTION:

How do I eliminate the danger of a lightning strike? I can't ground the copper pipe because the center conductor of the coax is connected. Naturally, I am concerned about damage to any electronic equipment connected to this antenna, but I am also concerned about actual physical damage to my house from a strike. I live in a coastal region, and we sure get our share of thunderstorm and lightning activity. There must be some way that this danger is handled, since so many vertical antennas are in daily use by SWLs and hams.

Ideas, anyone?

Thanks,

Rog

>
>The placement of the control above the LCD display bothers me.
>How well does that work with your hand getting in the way?
>
>Wade
>

The intent is to operate the Garmin 45 with 1 hand.
The controls are operated with the thumb. This way there
is no problem seeing the screen. You should also consider
the new Garmin 12XL. This is a 12 channel receiver that is much
faster to lock and tracks much better under tree cover and other
marginal conditions. These sell for about $250 and are in short
supply for the next month. Check sci.geo.satellite-nav.

Rog,

See the July 1996 Monitoring Times article called "Absolute lightning protection" by William A. Rhodes, an excellent article. This approach is worth pursuing and offers near-complete immunity from direct strikes on your antenna and equipment.

Happy listening!

Jon

4850. Alpha 87A Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-21 00:00:00 UTC
From: Dick Green <dick.green@valley.net>
Message-ID: <01bc2016$345b4fa0$6aa073c6@dns1.tpk.net>
Source record: 182415

Hi. I've discovered an unusual problem on the Alpha 87A and wonder if anyone else has run into it.

If you set the amp to operate on 1.8 MHz or 3.5 MHz, then change bands by RF sensing to any frequency in the range 7.000 to 7.020, the tuning is way off (low power, high plate current.) The reason the tuning is off is that the plate choke relay is not being activated for this one subsegment of 40M. This only happens when switching from the two lower bands because the plate choke relay is turned off for them. When RF switching to the lowest part of 40 from any higher band, everything is fine because the plate choke relay is already on.

The problem can be corrected by pressing either the band switch or one of the segment buttons (then you hear a loud click as the "clapper" hits the plate choke.) Evidently, the error only occurs when RF switching and not when manual switching.

Suspecting a software bug, I contacted Alpha and they're looking into it. Meanwhile, one person on the local cluster says he's found this problem on every Alpha 87A he's tried.

Anybody else noticed this one? If you want to try it on your amp, just set it to operate on 3.5 MHZ, set your transciver to 7.010, then hit the key. You will hear the smooth operation of the band switch and tune/load caps, but you will not hear the plate choke relay clack. The tuning will be off. Push the 40M band button or the first segment button, and you will hear a clack. Tuning will return to normal.

Note that if you happened to tune the amp for the lowest segment of 40 after RF switching from 160 or 80, then you won't see the problem. Instead, you will see it if you switch from one of the higher bands to that segment.

If you detect the problem on your 87A, let me know the firmware rev number and the approximate date of purchase or manufacture. I'd appreaciate any feedback via e-mail.

73, Dick, WC1M

Hi guys!

Check out the last page of info on the FT-920 at Yaesu Japan's web site! It's got the specs listed. Some of them are hard to read since they're in Japanese, but there's a table listing the receiver specs that's pretty much in English.

I bought a new TS-570D about a month ago and love it. Now that I've checked out the FT-920's receiver specs, I love my TS-570D even more.

4854. Silvertone 101425 antenna info

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-21 00:00:00 UTC
From: jborhek@primenet.com
Message-ID: <5ekl8n$gos@nnrp1.news.primenet.com>
Source record: 182419

I recently purchaced at auction a Silvertone NO.101425 "ten tube superhetrodyne" radio. Although I had no Idea of the condition at the time, it turnes out it is in excellent working shape (including the eye), and had the original owners manual/schematic tucked into the chassis. I believe it is mounted in what is referred to as a "tombstone" style cabinet. The manual lists the model as being 1937, with the following tube linup:

5Y3, 6K7G, 6L7G, 6C5G, 6G5, 6K7G, 6C5G, 6F6G(TWO OF THESE), 6Q7G

The radio, in fact, works so well it tunes in shortwave better than my $450.00 digital Sony shortwave when hooked to my 42.5' one wire antenna and ground. I still, however, have trouble with weaker and distant stations. There is a manual with the radio for a "DDX ALL=WAVE DOUBLET ANTENNA SYSTEM", Sears catalog No. 5567. It appears to be some sort of balanced antenna, with two 16' lengths of wire attached to what is referred to in the literature as a "transformer", then 50 feet of insulated wire to the radio.

I was wondering:

1. How one might construct such a device, and what if anything is the "transformer"?

2. Would there be any advantage to such an antenna over my single wire (42.5' unable to make it longer)?

3. Coud such an antenna be set up to work with my Sony which only has antenna and ground terminals?

Thanks

-John

4858. Help with TS 820S Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-21 00:00:00 UTC
From: Robert Redoutey <redoutey@bga.com>
Message-ID: <330DEA93.71DA@bga.com>
Source record: 182423

I have a problem with a Kenwood TS 820S Transceiver.

The digital display is off on each band.

160 1 khz
80 2.5 khz
40 5 khz
20 10 khz
15 10 khz
10 20 khz

This is apx freq off. I have the owners book and service manual, but not sure just where to find the fix. Probably just a cap is out of adjustment, but which one? I can adjust the "manual" knob to show the correct freq, but that defeats the purpose of the "digital" read out. Also I have noticed that its not just the display that is off, but something to do with the VFO, since tuning the VFO will not let me tune near the edge of the band. The tuning cap closes completely before I have hit the end of the band.

I have tried the fine tuning cap in the VFO can, but that gives me only a slight adjustment. Since it increases in freq, I think that it must be something with the base freq, and it muliplies as it goes up in freq.

The rig works great except for the display being off, and not being able to get to the lower edge of the band (bottom 10 khz or so).

Any and all information would be greatly appreciated. Please send info to the addresses below.

Thanks.

All:

If anyone is interested I'm looking into developing information about how to program Yaesu radios. I'm especially interested in learning about the FT51R and the FT8500. I want to develope C code that will allow me to program these radios on different platforms. If anyone is interested in this please let me know. Or if you have information to share please let me know.

I wanted to start this last year, but I started some serious course work
in college so this project suffered as did a few others.

The best advice is to disconnect the coax from the equipment when the antenna is not in use. This goes for any antenna that is not at DC ground potential. Short the center pin of the PL-259 to the shield ring, and leave the coax on the shack floor, away from anything that is grounded. This will allow any static buildup on the vertical element to drain off to the grounded radial system. Yes, this could invite a strike, but my gut feeling is that the strike is going to happen either way, if there's a big enough charge in the air. If the lightning can jump 30 miles across the sky, it can certainly jump the 2" or so from the vertical element to ground.

I'm sure millions of folks will disagree. Flame me privately.

Are you going to use it just on 20 meters? If so, you can ground the
base and use a slant-wire shunt feed. Otherwise a spark-gap at the
base and a gas trap on your coax will help. I'd still ground the
whole thing when not using it.

4880. IC756 Won't do SPLIT memories for RPTs etc.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-21 00:00:00 UTC
From: Pieter Ibelings <wave@mindspring.com>
Message-ID: <01bc1f8d$0edac780$fd1479a8@wave.mindspring.com>
Source record: 182457

Why is it that radio manufacturers are omiting split memories from their radios??? Both my IC756 and FT1000mp are not capable of storing split memory channels. So if I want to store 10 meter or 6 meter repeaters I have to type them in each time. Obviously the people designing these radios suffer from cranial-rectal inversion. I remember when every radio including the cheap $700 radio would do split memories.

You need a RS-232C to TTL voltage converter. The radio can only deal
with TTL voltages. This allows you to chain together 5 to 10, IC- 756
s ot other radios or up to what ever the fan out of the level
converter can stand. This aloows you to tie up only ONE serial port
in your computer for radio control.

The TTL serial port in the ICOM is a Bi- directional serial port. It
uses one wire fo BOTH TXD and RXD. It is a very inovative type of

connection. It is a trival task to build your own converter. About any amateur should be able to accomplish this task with the basic electronics knowledge he learned when studying for his license.

Gary

Surely you can press the split button once you have tuned to a memory
channel.. The 756 does allow for preset split offset which is retained
in the set mode it just does not store the actual offset in each
memory channel. .

Then why does Icom USA charge $125 for it. It should cost about $30 USA.
If that is the case then we are getting ripped off on the $170
455 khz filters as well. I bet they cost $10 to make and the Dealers
and Icom USA are making a killing!!! I wish Gary Fiber would address the
Newsgroup and explain why we are being OVERCHARGED!!!!!

I don't know about one from Motorola, but Larsen does - they call it
the NMO-012, and it can be cut to cover 136-160 or 148-173 ... and it
fits the "NMO", or New Motorola, type base.

It is indeed made by MuTec in England. I have the schematic and
installation instructions here for it. Send me e-mail to get a copy.
I will scan it at work, attempt text recognition on the instructions,
zip it and send it to any requestors.

My one also is not working to spec - it went very deaf.

I have a 91 pontiac gran am and have the same problem. ac does make an
rfi kit you have to pull the tank to put it in at least my car. the bad
part is it did not work. nor did a cap from ground to poss on power
right
at fuel pump. the funny part is some times the noise is not there.
anyway just somefeed back..

>Thanks

The VX-10 can only operate up to a maximum 30 Mhz bandwidth !! That's
it !! It is designed like that to reduce intermod !!

If you want wide band RX I suggest that you look at the Yaesu Amateur
FT-50RD version that covers 300-520 MHz right out of the box !!

The FT-50R with the FNB-V47 battery puts out the following:
4 watts on VHF Max
3.5 watts on UHF max

And it lasts forever....

Hi Butch,

The only one that still has parts for this 20+ year old radio is YAESU USA !! They still work on this model radio everyday !!! AND YES THEY STILL STOCK MOST PARTS !!

If you send the FT-ONE to a dealer for service.. Chances are a radio of this age is usually forwarded from the dealer on to Yaesu for service anyway adding to the service time. As for reasonable fees... When very few people service this and old radio like this you will have to pay a little more.

Then again... You can always sell it and pick-up a new FT-840 HF rig for around $750...

FYI... Kenwood no longer offers factory service for amateur products... So you have to send your (new or old) Kenwood radio's to a separate company for repair.

I just go my FT2400H back from Yaesu and I thought there service was
great and the bill was less than I figured it would be. I wouldn't
hesitate to send any Yaesu I have to them for repairs.

> would have to buy the Icom 756.
> Cheers, NS1R Steve Hershman

Steve,
The list price in Japan on the FT920 is 198,000 yen. (see the Nihon Yaesu Musen web page) The tendency is to discount list by about 20 percent -- meaning street price will be about 160,000 yen or less.

Given the exchange rate of 120/1 (ok...maybe a little higher or lower, but you get the idea) we are looking at a street price in the USA of between $1300 and $1400 bucks...Probaby will be released at Dayton for around $1399, and Kenwood will cut the price on the 570D/S to compete.

If supply and demand have anything to do with pricing this radio, the US suppliers might not offer much discount on the JA suggested retail price. They did this with the Icom 706 -- street price in Japan, Hong Kong, and Singapore was right at $1K while the US dealers were charging 1169 or more for the Icom.

Even so, I would not expect this radio to cost more than $1699 in the states. Any more, it's cheaper to order one from T-Zone or X-One in Tokyo and pay the 30 or 40 bucks in shipping to the states.

: manufactorers to stay away from. I have been looking at the Yaesu FT50

Great radio, the FT-530. Mine recieves from about 110-180, 300-510, 760-950. It is rugged as all hell (trust me on this, mine should be dead by now). It has great audio, am recieve and true FM transmit. This readio lets you set just about everything you could possibly want to change about it, from ringer melodies to the sounds produced by hitting the keys (musical notes, DTMF sounds, no sound, and something else. Not that i matters but the second stock rubber duck that yaesu treid with it gets out pretty well. This radio is a true dual bander in that it has v/v u/u u/v v/u. the 530 replacement the 50 is not a true dual bander in that respect.

The bad stuff is that its PL tone squelch will open periodically if the regular squelech is too low, it seems to go through batteries a little too quickly, and when audio is channeled from one band into the headphone jack and from the other into the internal speaker there is some audio leakeage.

I suggest you try to get a FT-530 or wait around for the ADI AT-600. For $300 U.S. new, if it is anything as good as their AT-201 it should really be a steal.

Let me know what course of action you take.

Dear Friend,
Five minutes and five dollars can change your life!!!THIS IS THE FAIREST, MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Would you like to make thousands of dollars, quickly, legally, with NOCATCH? Then keep reading..... please take five minutes to read thisarticle; it will change your life, just like it did mine. It's true! You can make up to, or over, $50,000.00 in 4 - 6 weeks; maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested, keep reading; if you're not, I apologize forwasting your time.

Here we go. A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks, with only an initial investment of $5.00!! So, I thought, "Yeah, right, must be a scam", but, I was curious, like most of us are, and kept reading. Anyway, it said that you send $1.00 to each of the five names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups, (there are thousands). No catch, that was it! So after thinking it over, talking to a few people first, I tried it.I figured what have I got to lose except for 5 stamps, and $5.00, right? Well, guess what....within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming in , tripling in size and multipying by 10 - 20 times the amount that I got the first week! In my first week I made about 20 - 30 dollars. But, by the end of the second week, I had made a total of over $1000.00!!!! In the third week, I had over $10,000.00, and its still growing. This is my fourth week, and I've made about $42,000.00 TOTAL, and the money is still coming in.....Let me tell you how this works, and most importantly, WHY it works, also, make sure you print a copy of the article NOW, so you get the information off of it, and begin making money.The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 separate pieces of paper and write the following on each sheet of paper...."PLEASE PUT ME ON YOUR MAILING LIST", and then write your NAME AND ADDRESS. Get five $1.00 bills and place ONE inside each piece of paper that you just wrote on. Fold each paper so the bill will not be seen in the envelope, (otherwise, nosey people who like to steal envelopes with money in it won't get yours). Put one paper inside each envelope, and seal it. Do the same for all five. You should now have 5 envelopes, sealed, EACH with a piece of

paper AND a $1.00 bill, stuffed inside of the paper. Make sure those words that were stated above, are written on each paper. What you are doing is creating a service; this is PERFECTLY LEGAL. Now then, mail the 5 envelopes, with the paper and $1.00 bill in each, to the following 5 addresses:

1. D. Ellis, 8301 W. 92nd St., Overland Park, KS 662122.

2. J. Krakowiak , 1112 W. Broadway #1, Anaheim, Ca 928053.

3. J. Sides, Lamar Box 1, South Plains College, 1401 S. College Ave.,Levelland, TX 79336

4. Areg Mkrian, 15 Alma Ave. Belmont, MA 02178-4404

5. A Karns, 4000 NW 53rd, Oklahoma City, OK, 73112

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up, (5 becoming 4, 4 becoming 3, etc.), and put YOURNAME as number 5 on the list. You can slightly alter this article ifyou need to; editing what you need to edit.

STEP 3: Post your amended article, (with your name at #5), to at least 200 newsgroups, (There are close to 19,000 of them). HOW TO DO THIS:If you are using Netscape 3.0, do EXACTLY the following:
1) Click on any newsgroup, like normal, THEN click on 'TO NEWS',which as on the far left when you're in the newsgroup page. This will bring up a box to type a message in.
2) Leave the newsgroup box like it is. CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!
3) Tab once, and you should be ready to type. Now, re-type, (onlyonce), this WHOLE ARTICLE WORD FOR WORD, except to insert your name at#5, and to remove #1 off the list; plus any other small changes youthink you need to make. Keep most of it the same!!
4) When you're done typing the WHOLE article, click on FILE in THISBOX, right above send, not where it says Netscape News On The FirstBox. Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.
5) If you still have all of your text, send, or post, to this news group, now, by just clicking send; which is located below FILE, and right above Cc:.
6) Here's where you're going to post all 200. OK, click on any newsgroup, then click on 'TO NEWS', again, in the top left corner. Leave theNEWSGROUPS BOX alone. Again, put a flashy subject title in the SUBJECT BOX. Hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click 'OPEN'. Now click on OK. If you did this right, you should be able to see your file name in the attachments box, and it will be shaded green.If you use IE EXPLORER, it's just as easy......HOLDING DOWN THE LEFT BUTTON,

HIGHLIGHT THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOURRECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1.00 TO. NEXT, GO TO THE NEWSGROUPS AND PRESS "POST AN ARTICLE". A WINDOWWILL OPEN. TYPE YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK INTHE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V", AND THE ARTICLE WILLBE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO, AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERY TIME YOU POST THE ARTICLE IN A NEWNEWSGROUP, ALL YOU HAVE TO DO IS REPEAT "CRTL" AND "V" AND PRESS POST.
7) That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 different newsgroups. You see? Now you just have 199 to go!!! (Don't worry, eac hone takesabout 30 seconds; once you get used to it). REMEMBER ..200 IS THE MINIMUM. The more you post, the more money you'll make.AND THAT'S IT!!!! THOSE ARE THE ONLY 3 STEPS THERE ARE!!! You are now in the mail order business, and will start receiving $1.00 envelopes from various people, all over the world, within days.(HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILLMAKE!). You may want to rent a PO Box, eventually, because of all the mail. If you wish to stay anonymous, you can come up with a name, suchas "manager" or"investor". Just make sure all the addresses are CORRECT, please! LET ME TELL YOU WHY THIS SYSTEMS WORKS!! Out of every 200 postings, let's say I ONLY receive 5 replies, (this is actually VERY LOW). So, I made $5.00 with my name at #5. Now then,each person who just sent me $1.00 makes, say, only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1.00 now; that's $50.00 you just made! Now then, your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, or10,000 postings, (50 X 200). Average return is 500 at $1.00 each, which is $500.00! They make 200 postings, which is 5000 returns at $1.00 each,which is $5000.00!! And finally, 5000 people make 200 postings each,with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000.00 BEFOREYOUR NAME DROPS OFF THE LIST!! AND THAT'S IF EVERYONE MAKES ONLY 200 POSTINGS, AND IF ONLY A SMALL % PEOPLE RESPOND!!!When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5.00 to THE NAMES ON THE LIST, PUTTING YOUR NAME AT #5 AGAIN, AND START POSTING AGAIN!! The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND ARE READING THESE ARTICLES EVERY DAY!! JUST LIKE YOU ARE RIGHT NOW!!! So, can you afford $5.00 and see if it really works? I think so.......People have said, "What if the plan is played out and no one sends you the money?" So what! What are the chances of that happening when there are TONS OF NEW, HONEST USERS AND NEW, HONEST PEOPLE joining theInternet and Newsgroups everyday? and, are willing to give it a try? Estimates are at 20,000 to 50,000 new users, each and every day!! Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!! You just have to behonest. Make sure you print this article out, RIGHT NOW, also, try to keep a list of everyone that sends you money, and always keep an eye on the newsgroups to make sure everyone is playing fairly. REMEMBER: HONESTY IS THE BEST POLICY!!

YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY! GOOD LUCK TO ALL, AND PLEASE, PLAY FAIRLY; YOU WILL REAP THE HUGE REWARDS FROM THIS.....WHICH IS TONS OF CASH!!! ****By the way, if you try to deceive people by posting the messages with your name on the list, and by not sending the money to the people already on the list, you will not get much. Someone I talked to knew someone who did that, and he only made $150.00; and that was after seven or eight weeks!! Then, he sent the 5 $1.00 bills; people addedhim to their lists, and in 4 - 5 weeks, he had over $10,000.00. THIS IS THE FAIREST, AND MOST HONEST, WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME! GOOD LUCK, AND HAVE FUN!!!!

Rocky, I appreciate the feedback.

Could you tell me about the AC RFI kit? I have contacted people at AC Delco, multiple GM dealers, and several GM factory referrals. Also contacted tech people at Borg Warner (BWD) and Standard Ignition (makers of aftermarket pumps). No one knows of a kit that is installed in the tank for GM cars (Ford does make available an in-tank RFI filter). Although a person in the group that prepares the GM cars for police fleets said that a harness for the Lumina that included a RFI filter (external to the tank) was available. The GM PN is 25027405. This may be adapted to other models with some modification.

I would really like to know about the AC RFI kit that you describe (Part Number etc.)

Hi Steve,

Could you explain how this radio is not a good one to try it on and
also does the radio show the correct frequency once the mod is
made or does is show something different and would I have to add/subtract
some value to get the correct frequency?

Also can you tell me where you found out about this mod (what magazine QST,
etc). I am trying to find the original sources of all the mods I can find.
With a radio this old, it's getting harder to find out information on it.

Steve Dove (dsp@nbn.net) wrote:

: Not a good radio to be trying it with. However, grounding pin 14
: on the accessory connector will extend the frequency ranges to:
: 160 - 1.0 - 3.0 MHz
: 80 - 3.0 - 5.0 MHz
: 40 - 7.0 - 9.0 MHz
: 20 - 14.0 - 16.0 MHz
: 15 - 21.0 - 22.0 MHz
: 10 - no change, sorry

Just heard from several ULTRA RELIABLE SOURCES AS TO THE FT-920 PRICING!! You will see the radio on sale for $1300 to $1400 USA DOLLARS! It sounds to low since the TS-570S sosts $1800 and is not as good. The gentlemen who told me this has NEVER BEEN WRONG IN THE PAST! I think I will wait till Dayton to see if he correct !!!! If you want I can GIVE You guys the YEN PRICE and CONVERSION factor but I feel that will just confuse the Issue.

I have an ICOM R-10, just received it yesterday. It seems to be a very nice unit. Easy to setup and use.

Just starting to get a feel for performance, but so far looks good.

For your information I purchased in from:

Steve Uhrig, SWS Security, Maryland USA
Manufacturers of electronic surveillance and commo gear
tel +1+410-879-4035 fax +1+410-836-1190
mailto:Steve@swssec.com

These guys are for real. They shipped the unit when they said they would. Their prices are the best I found.

Give them a try if you are in the market for one of these units.

I would be interested in others experience with the unit.

4923. DEAL ON FT50Rs, Not Universal Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-22 00:00:00 UTC
From: Thomas Gasta <tomgasta@worldnet.att.net>
Message-ID: <5enqdp$mv9@mtinsc03.worldnet.att.net>
Source record: 182250

R and L Electronics is selling 5 watt FT50Rs for $299.95 and you get a free FNB49 battery with purchase. I just bought one from Universal Radio and did not get the free battery and paid $309. It seems Yaesu sold these batteries to dealers for ONE CENT for each radio bought as an incentive. Most respectable dealers are passing this along to customers, but as I found out, not all are respectable.
Just what is the markup on a battery you paid one cent for when it is being sold for $28. By the way, this is a toad battery, same size as the 5 watt battery but 6 volt and only 600 milliamps. The slim battery has more juice, probably why Yaesu is wanting to clear the warehouse.

4924. Radios and equipment for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-22 00:00:00 UTC
From: Bob Scott <bscott@pla-net.net>
Message-ID: <01bc210a$990718e0$b10bd8cd@bscott.pla-net.net>
Source record: 182251
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have:
1. Alinco DX-70t for sale. It is about 14 months old.
It is in good to excellent shape, with NO marks on the face and only
scrapes on the sides
where the mobile mount attaches. I have the seperation kit for the
faceplate, and a mobile
mount (Not the Alinco mount), box, manual, hand mike and power cord. This
is a 10-160
meter hf rig at 100 watts, and 6 meters at 10 watts, and does all modes. I
am asking $675.00
Current A.E.S. price: $839.95 plus about $45 for separation kit.

2. Alinco EDX-2 Autotuner for the above DX-70t radio. It is a remote mount
tuner, (ie.: trunk or bed of pickup), and works 10-80 meters with a 102"
whip. To work 160 with the tuner, you need to add an 8'
wire to the tip of the whip. This is like new in the box, only 2 months
old. I am asking $225.00
Current A.E.S. price: $309.95

3. MFJ 962C 1.5kw tuner/swr/wattmeter. Check one of the magazines or
catalogs for all of the
specs on this. It does not have a dummy load built-in. This is in
excellent shape. I am asking
$160.00 Current A.E.S. price: $229.95

I would like to sell the DX-70t and EDX-2 as a pair, and as such will cut
some off of the total
price. Buy both and get them for $875 plus I will pay shipping. New cost:
$1194.90

Reply below or call me at (219)-942-0271, and if I'm not home, leave a
message.

If prepaid by check, I will wait for it to clear, or money order gets it
shipped the same day.
I will ship Fed-EX C.O.D., but only after shipping and C.O.D. is paid up
front (I did get burned
by a refused shipment in the past).

I am selling this to finance a new HF amp for the shack, and something had
to go,
so the mobile HF rig was the unlucky one.....

> this respect the Europeans are ahead of us.

The 10 V/m and even 100 V/m susceptability requirements are essentially
meaningless. The field from a close HT easily exceeds this.

10,000 V/m would assure protection for safety-critical equipment such as
life support, 1000 V/m
for mission-critical equipment such as cash registers, and maybe 250 V/m
for other stuff would
be much more realistic.

I suspect you are a ham in the tradition of KV4FZ, that notorious personality of the (14.313 MHz) airwaves. Never the less, I would enjoy meeting you on the air sometime, say, on 20 Meter phone in the General class portion of the band. I know you are a cw buff but I think phone would give a bigger audience for you and allows others to make comments more readily. However, if hams are as gutless as you say, there should be few comments.

As far as the facts about Little Leo's are concerned, I am sure you are armed with all sorts of technical data about their compatibility with the existing uses in the bands. However, I would like to know where you got such data because everywhere I go says that such data does not exist.
This is not to say that such data would change my position. I am against any commercial intrusion into the amateur radio allocations, especially the ones that are being fully utilized such as the 2 M and 75 cm bands.

I look forward to your reply.

Sincerely,

Michael Goad

Actually, Burt, your news article has helped me to decide in favor of
sending the FCC an e-mail in SUPPORT of the ARRL's position and to
further encourage every ham I talk with to do the same. If you are so
against amateur radio and all it is and does that you are willing to let
the commercial interests come in and take over (you know they won't be
"shared" for long) two of the most utilized bands we have, why don't you
turn in your license and get out of ham radio all together.

If you believe that protecting the interest of amateur radio is not in
the best interest of the general public, perhaps you should come down
and
talk to some of the victims and rescuers involved in the aftermath of
hurricane Andrew in Dade County, FL. Amateur radio's ability to be used

in times of disaster is highly dependent on the bands the little leo's want. We cannot allow any intrusion on these bands if we are to be useful
to the public in times of emergency.

For the record, I am a communications technician for the fire-rescue department of a local county, so I do have some first hand knowledge of the events following hurricane Andrew and the utilization of amateur radio there prior to the arrival of outside help from FEMA and others. Because of its usefulness, there has been a greater effort by the local governments in south Florida to work with the amateur radio community to ensure that this service will be available in the future. Many agencies now have amateur radio stations in key facilities and have lined up operators to run them in emergencies. Some have provided learning materials for their own personnel who expressed interest in becoming ham radio operators.

I am not sure what your motivation is in backing the little leo's, but I suspect it is financial. What we are talking about here goes way beyond the almighty dollar in my book. I am here to let you and all who read this that we will fight this to the end.

Sincerely,

Michael Goad

I will take $650 and can be reached at (508)-821-2993 or e-mail. I live in Lakeville, Ma. about 35 miles South of Boston. 73's WZ1U Steve

4938. Tuning of a PLL or DDS Transceiver...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-22 00:00:00 UTC
From: johnla1018@aol.com
Message-ID: <19970222235600.SAA01083@ladder02.news.aol.com>
Source record: 182265

If anyone has knowledge on how a PLL or DDS transceiver is tuned I would be very grateful. I realize that a programmable frequency divider in the PLL is programmed by a dedicated microprocessor to change frequency. But when someone turns the tuning dial on the radio, how does this command get to the microprocessor? Is it through an optical-shaft encoder sending a digital code directly to the microprocessor, or is it a potentiometer feeding a rising or falling DC signal to an A/D converter, which then feeds the microprocessor, which then commands the PLL? Can't seem to find the info in any book in a simplified form.

Thanks very much!

John Lasko

1. The jack on top is designed for 8-15 volts.

2. VR8 on the IF unit adjusts the tone level.

3. ????

If it's the 100 watt model, in top shape without any mods, it's worth in the area of $300.

If it's the 30 watt model figure upto $200 in exelent condition.

> be few comments.

In actuality, Burt has been invited numerous times to a moderated roundtable type forum on the band and frequency of his choosing. Each time, he is, what is referred to as a no show, thus proving the saying that those who talk the talk (the gut vs gutless scenario) don;t necessarily walk the walk

Look for the Burt special event station to be setup VERY near his home sometime around the end of March. The amateurs of Cape Cod and surrounding areas will be invited to attend this. One special feature will be to show Burt in his true environment. Hopefully, Burt will make an appearance and even work some stations (after all, we will be parked in his neighborhood) We (and there is going to be more than one) will be connected to the Internet and will be demonstrating the public minded Burt to all his neighbors

More details as time progresses

>
It comes with a mobile bracket and 25W clip on amp. It locks on to the back
and provides a rear panel antenna jack. The amp detaches and is replaced by a
optional nicad pack for portable use. The front panel BNC ant jack is only
enabled when not using the amp.

I live in an area that's got a lot of 2m activity and during conetsts and
openings, the band is very busy. The front end is not the best in the presence
of strong signals, but no VHF multimode really is. If you want great strong
signal performance, use a good transverter and an HF rig. But the 290RII is a
good all around rig. Just don't expect miracles.

Oh it's also got 10 memories, takes an optional tone encoder bd (set it to
one tone with a dipswitch). One other minor bad point - the key and headphone
jacks are on the side and are awkward to reach in a hurry. Like when I need to
plug in my keyer for that weak one.

> ...a definite QRP enthusiast...
The price on the FT-920S (QRP) is close to the price on the Full power version. Why on earth would you want to purchase it? Simply turn down the power to QRP with the RF POWER control. When you decide to sell it to upgrade someday you will get much more $$$ for the 100 watt version. By buying the 10 version you are limiting your options.

Total bullshit. Tommorow is Sunday let us have a go at it.
I can go on almost ANY band.
Why don't you cite ANY time a ham has accepted my challenge, they always have an excuse, (my rig is packed away, the antenna is down, or just no reply).

I already told a local ham of your offer. If I am invited I will come.
The local hams despise me more than you do but they have zero guts.

You know I do not hide, you can see AND hear me on my WWW page, can you say the same for any others around here?

As a former California firefighter I feel qualified in respectfully
saying that kr4wm's comments below are just horse poop.

kr4wm@sccoast.net wrote

>I am a career firefighter. I work in a <paid> department, and do it for a
>living. I'm not some yahoo volunteer out to make a name for myself by
>doing stupid things.

Save the rivalry for the FIRE-L newsgroup; you know full well that over
75% of our nation's firefighters are volunteer/paid-call. I won't allow
you to degrade over 3/4 of our country's firemen.

>When I got my amateur license, it was then that I found out that
>certain ham radios could be modified to work out-of-band. At the time,
>our department was stiffed for funds, and occasionally, some of us would
>be inside a burning building with no way to communicate with the outside
>(lack of radios).

No excuse for using a 2m HT. Daily I see very good prices on Motorola
HTs on rec.radio.swap; just last week someone had 100 Mot HTs for
VHF-hi going for $25 each (see below). And resellers such as Tele-Path
have excellent prices on used gear, too. Once single fund-raiser would
have earned your department enough money to go the legal route.

Here's an example from rec.radio.swap:

Subject: Re: Motorola walkie-talkies for sale: $25.00 each
Newsgroups: rec.radio.swap
Radioshop@aol.com wrote:
>Quantity available 30: Motorola HT-220, 1 channel, 4 watt, $25.00 each.

What's your department's class rating? It must be very bad (which trans-
lates to expensive fire insurance for your community's residents) if
your comms are lacking as you say.

>It was a godsend that I obtained permission from our
>department's chief to use my amateur HT and mobile to transmit on the
>fire department frequencies!

Did you explain to him you were endangering your department's license?
Did you explain to him that modified amateur equipment might interfere
with other services and thus possibly endanger lives?
Did you explain to him that your amateur HT is not built to commercial
standards and might fail due to the heat of fire?
Did you explain to him that your HT is frequency agile and a slight

bump during firefighting might result in a change of frequency?

Regarding these last to points, having an HT gives one more of a
sense of security during a fire and thus, you might place yourself
further "into it" than if you didn't have the radio. Failure due
to heat or freq'y change have now placed you in greater danger
than if you didn't have any HT at all (you probably wouldn't have
gone as deeply into the structure).

The fire radio service was created for you and your department's safety.
Very high standards (e.g. NFPA) are set for comm gear; don't endanger
yourself and those depending upon you by being so thrifty/lazy.

> I've
>also used my mobile rig when I was off-duty to call the F.D. Dispatcher
>and inform them of auto accidents that may have gone unreported for long
>periods of time.

Still no justification for not going the legal route. The proper gear is
out there and a very reasonable price.

>Or to let them know that no emergency response was
>necessary, saving the wear and tear on our engines. At $700 per run, it
>adds up. Yes, all things considered, it costs about $700 to put a fire
>truck in the street for EACH CALL!

The your department needs a new fiscal officer. Even if you include
depreciation, fuel, engine and pump wear, et cetera, it should be
far below $700/run. Please document how you arrived at that figure
(and don't include FF salaries - that's a cost to the department
regardless of the number of runs).

> 73, Web Williams, KR4WM, City of Myrtle Beach Fire
>Department, Myrtle Beach, SC

73,
Jeff KH2PZ (former Fireman II for City of San Clemente, and Calif.
Division of Forestry)

P.S. I'd say it's about time to petition manufacturers to design
amateur-only radios; the major benefit would be better performance.

<burtfisher@geocities.com> wrote:

>It takes guts to kiss ass?
>Thatr is what hams are experts at.

Burt,

You call yourself a teacher? A mentor entrusted to help shape the minds of our young children? Heaven forbid, a roll model? By your posts you have proven that you are incredibly opinionated, not above using foul language in an open forum of mutual learning that is easily accesable by curious young minds, you point your "holier-than-thou" finger at Amateur Radio Operators and seem to have no problem speaking ill-will of this group of human beings. Can you tell me just what exactly it is that makes you a better person than any of these people you speak so poorly of? I am an Amateur Radio Operator myself and I take great pride in it, I also pride myself on being a volunteer interpreter for the deaf, a volunteer for the American Legion, an advocate for the rights of Veterans and the disabled, among other similar interests. I literally volunteer more of my time than I work for a wage, I may be poor but if pride were gold I'm a very rich man.. Can you say that, Burt?

This is America, Burt, and you are by the first ammendment entitled to voice your opinion, but you already know that. I too am an American and am entitled to my opinions and my opinion is that you are a bigot and have no business in the teaching profession if you are incapable of treating other human beings as the equals that they are. In the mean time, I'll be praying for your students..

If you have such a problem with Hams, why not (on the way to church next Sunday) rip up your FCC license into little pieces and go about helping your fellow man in a manner more constructive than the one you have chosen.

Greetings. I am looking for any mods to improve the sensitivity of the receiver in a Uniden HR-2510 10M mobile rig. I just let go of my HTX-100 and now realize that the receiver in the Realistic 100 was very hot, compared to this Uniden 2510, which by comparison, is hard-at-hearing. Any help appreciated on this point.

Also, does anyone have an easy mod to "correct" the mic UP - DOWN buttons from stepping in 10KHz steps, even when the step ("SPAN") increment is set to 1KHz or 100Hz? If I am at 28.395MHz, and set for 1KHz (or even 100Hz), and push the UP button, this rig jumps to 28.400, then steps in 10KHz steps to 28.410,28.420, etc. Same with the DOWN button, in reverse order. I'd like it to step to 28.396, 28.397, etc., as I hold the UP button down. The VFO dial does this well, but the mic buttons seem to be limited to the described step. Is there a way around this?, or do I have to rewire my UP and DOWN buttons to the VFO dial steppping switches directly? Has anyone ever done this before? All help is appreciated. I'm trying to make a good rig better.

Thanks in advance,

Doug Gavilanes, N6XQY
Garden Grove, California

Does anyone have the Rat Shack VHF SWR/power meter? It is item RSU 10508018 in the 1997 catalog. It used to be sold in stores but now is available only through mail order. If you have one, or used to have one, what is/was your opinion of it? Is it relatively accurate? If you have the documentation for it, could you transcribe it into digital form or perhaps scan it into a GIF image and email it to me? I'd like to give the specs a read before spending $40+s/h to answer my questions. Thank you for your help.

Steve

4972. KnightKit "Ocean Hopper" Front Panel Replacements

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-22 00:00:00 UTC
From: 3W8PE1B <willi6@erols.com>
Message-ID: <330F2CEA.68F1@erols.com>
Source record: 182306
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave,rec.antiques.radio+phone,rec.radio.amateur.homebrew,rec.radio.swap,rec.radio.amateur.equipment

For those of you out there who are in the midst of a nostalgia trip, restoring an old KnightKit "Ocean Hopper", I've found an excellent source of replacement front panels.

These panels are made of heavy gauge metal with all holes pre-drilled (correctly sized and placed). They were professionally painted and all markings silk-screened by a company that specializes in custom enamel work. The color match and finish is very close to that of a sample "Ocean Hopper".

These panels are available from Dave Ishmael, WA6VVL, noted "Ocean Hopper"
restoral guru, and author of "Vintage Anthology - Book I" and other articles
in various ham and antique radio publications. Dave had these produced to
support his own restoration projects, and was kind enough to have a few extra cranked out for the other "Ocean Hopper" affecianadoes. He only had
a limited number made and only a few of those are left.

Even if you do not have a current "Ocean Hopper" project in the works, it might be worth grabbing one+ while they are available. Both of the "Ocean Hoppers" I have found showed their age on the panels and it would have been difficult to restore back to "as new" on an individual basis.

The other possibility would be to use the front panel as the starting point
for any homebrew regen project - has holes for Main Tune, Bandspread, Antenna
Tuning and Regeneration.

Price is $20 for one, $35 for two, and $45 for three. Post Paid.

* * * UNSOLICITED TESTIMONIAL - Spelling ;-) * * *

I only know Dave by reputation in the "Ocean Hopper" community and from reading his articles. Having a fair idea of what it would cost to have one or two of these done with any quality, I ordered three from Dave. I was extremely impressed by the quality and authenticity of the panels and doubt that Allied Radio did any better back in the 50's. These will save me time and $$$$ on my two restorals! Dave K7HMP

According to Carl Stevenson, unless you own an electronics repair house
and sit around all day "inventing" new radio stuff, you're not a 'real ham'.
You're just a yacker, beeper, or CBer (and multiple combinations thereof).

>Evan

Evan,

A Land Mobile radio is miles ahead of the typical amateur receiver.
the front end is much tighter. There IS a difference between the two
products. The land mobile costs many more dolars to build and
typically sells for far more than the amateur community will stand for
a radio.

Now there is a new version of the F40LT that you can switch to narrow
band in software. This sets the deviation to 2.5 KkHz and the maximum
receive bandwidth to 12.5 kHz. You can do this on a per channel
basis. The amateur radios can not switch the receiv bandwidth. Land
Mobile is now allowed to splinter their typical 25 kHz channel
spacing, and in a few more years they are going to split in two again.

The F40 LT might go to 480 Mhz plus, but you will likely need to tweak
the VCO. Doing so, the lower frequency coverage may be lost. If you
want something that covers DC to daylight, but give up on the front
end rejection open an amateur radio. If you want a land mobile radio
that covers 440 to above 480 MHz, buy two land mobile radios that are
designed for their respective frequency ranges.

Gary

Nope, sorry Burt but I am not an ARRL type person. Those of us that work
with the young folks here show them **REAL*** ham radio and not the tripe
that is spouted by some on the news groups or on the HF bands in certain
places. But then I doubt that you would do any differant to lure the
young in as your posts show that you really only do the motions of trying
not put any heart into it. It is plain to see that your love is in the
commercial area. Yup, I was in the commercial area too, I guess if you
call being a chief engineer for a couple of radio stations commercial.
But that is a differant story....And only has enhanced my abilities and
enjoyment of ham radio.

enuff said. end of thread.

Fred Ke8tq

I may not always agree with what you say. But I will defend to the
death your right to say it.

4981. Kenwood Auto-antenna Tuner Help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-22 00:00:00 UTC
From: "Kevin E. Gray" <may1985@email.clover.net>
Message-ID: <01bc20d5$4f7dd220$4f7c65ce@may1985>
Source record: 182315

Hello name is Kevin. Have an older Kenwood 44o SAT. 7 million serial number. The auto tuner does not properly tune on several bands. Appears to just keep searching without lowering the SWR. Any suggestions..

Thanks

Kevin

Laws differ in different parts of the world. In the UK possession of an amateur tranceiver is legal whether the owner has an amateur license or not. Totally legal. In fact you can buy them over the counter with no questions asked. Using it is a different question.

>The above quote clearly does not apply to Packet SYSOPS, does it?

The right of free speech comes as a bundle with the responsibility of free speech. Since you demonstrate little responsibility yourself it would appear that packet sysops are forced to take responsibility. The pity is that now you will have your electronic tantrums on the news groups. Perhaps if all of those on the news groups who were tired of your spamming were to flood your provider with complaints your provider would take the same action as the packet sysops. Then you could scream your complaints out on the beach.

To answer your as yet unasked question, Yes I would say the above to your face, I just would not fly across the country to do it.

Now that my KnightKit "Ocean Hopper" and Ameco AC-1 projects
are well underway, it's time for yet another DXpedition into
Nostalgialand.....

The BN-1 is one of a series of small, battery operated, tube radios
(transceivers and receivers) produced by Western Radio of Kearny, NE.
The BN-1 was aimed at the Novice (hence, the "N") and covered
80/40 Meters, was XTAL controlled, and was battery powered
(hence, the "B"). It was available as a BN-1K (kitform) and also
the BN-1A (improved circuitry). The normal small cabinet was
fiberboard material, although a metal case was available for $3.50!!!

The tube was a dual triode (3A5) that served as the XMTR and RCVR.

you started QRP with a single 45 Volt battery
and could work up to QRO with a couple of 90 Volt batteries.

They normally adversized with small (one colum inch) ads in the
back of Electronics Illustrated and Popular Electronics.
The Western Radio (WESKIT) line also included:

Allband Transceiver (BAB-1)
Six Meter Xcvr (BA6-1)
Two Meter Xcvr (BA2-1)
Citizens Band (C27B)
All Band Receiver (BR-1)

If all this nostalgia peaks your interest, Sheldon Wheaton,
KC 0 CW, has a BN-1 illustrated on his web site at:

http://www.sky.net/~swheaton/bn1.html

[[Thanks, Sheldon!]] :-)

I had one of these as a kit (isn't that always the story); but,
traded it to a local radio shop for a batch of SWL books,
(Actually a good deal at the time - before nostalgia set in!)

If you have one of this cute little rigs you'd like to part
with, drop me an E-Mail at: willi6@erols.com

No, Mike ... I don't view Dana that way ... I have seen enough of Dana's
postings to realize that there's a mind at work at Dana's QTH ... a
curious,
inquisitive mind that puts forth the effort to LEARN about radio technique
and technology and views ham radio, not as a competitive sport "para los
machos," but a fascinating learning experience. Too bad some of that
doesn't rub off on you, Mike ...

I think what everybody misses is a point I saw in Popular Communications a
few months ago./

If you're going to use your vhf/uhf rig out of band, e.g. in the marine
band,
have a marine license, even though it isn't type accepted, who's going to
ask which radio you're operating. SAme for gmrs, or other services. If
youy're licensed to use the service, even though your radio isn't type
accepted, you can operate out of band and get away with it. It's kind of
a "DOn't ask, don't tell thing."

Yes, Japans economy is in a bad state (sniffle). That means GREAT PRICES
FOR US HAMS!If you go to the Yaesu web site

http://www.yaesu.co.jp/news/index.htm

You will see the price in Yen (LIST PRICE). Then multiply times 80%
which is the STREET PRICE. Then convert that price from YEN TO USA
DOLLARS. Then you will have a close price on the new radios (FT-920) etc
that have not been released yet. The only exception is on closeouts and
brand new models in which case the price will come down in about six
months after being on the market. I wait that long because I want the
"BUGS" worked out. If the FT-920 really costs $1300 to $1400 then they
will sell like HOT CAKES. This will force KENWOOD to lower the price of
the TS-570D and TS-570S models as well as ICOM lowering their IC-756.
I will pass on any new info as I get it on any new products coming out.
CHEERS, NS1R Steve Hershman

Hi everyone, I have a Lafayette HA-146 2 meter FM rig for sale.
It is a 25 watt 12 channel crystal radio. It has 2 simplex
frequencies and one repeater pair in it. It is almost a 9 out of 10
in appearance. It also has a priority channel (user selectable).
Comes with microphone and manual. It's in working order.
I am asking 40 dollars. plus shipping.
If interested please e-mail me direct at: mrusso@hoflink.com

Thanks, Mark

BellSouth/IBM Simon Cellular Phone/Organizer $300/OBO
Simon, leather case,stylus, 1MB PCMCIA card,
(2) reg. batteries, (2) high capacity batteries, Quick
Charger, Simon-to-PC connectivity kit. Works great!
E-mail,Appointment book,address book, sends *AND* receives faxes!
touchscreen! And it's a cellular phone, to boot! it's awesome!

RS HTX-404 440mHz Handheld. $125/OBO
Radio, ducky,strap, charger,NiCd Pack, AA-cell pack.

IPS PowerCard - $125/obo
now *THIS* is cool. It's a UPS on an ISA card.
Totally complete, with battery,card, PS cables,
software,etc. tested...works fine!

Mac IIci - $800/obo complete
68040/33mHz Accel Card
16MB RAM
420MB Hard Disk
MacOS 7.5.3 Update 2.0
3Com Ethernet Card (NuBus)
Aple 8/24-Bit Display Adapter
Apple Extended Keyboard
Apple Mouse
Apple 14" Monitor

Professor SF2 Super NES Backup Unit $150
Brand-spanking-new Super Nintendo "Backup Unit." 32 MBIT. Buy at
asking price, and I'll throw a few games in. Bought it a few weeks
ago for my kids, now they want a nintendo-64. I told them this has
to go. Has box,book,perfect like-new condition. I'll even throw in
the software, and cable to hook it up to the PC, which cost extra!
This thing will even do Donkey Kong Country 1,2,3!

GENUINE IBM 9371-110. MicroChannel/370. $1000/OBO
Yup. You read correctly. This is sort of a "Developers's System" 370.
If you know what I'm talking about, you know it's a steal, If you don't,
then it's a ~250 pound 386/20, w/ 3MB RAM. 370 CPU has 8MB RAM on it.
Also, If
you know what it is, you know UPS won't haul it. Fits in the back of a

Bronco II,
BEHIND the back seat, though! ;) Has 3Com Ethernet card, IBM MCA SCSI
controller
with cache, IBM MultiProtocol Adapter (Sync/Async).

Banyan Vines Version 4.10/4.11 $200+MUCHO shipping
Has AT/MCA versions, plus all docs. Helluva shipping charge, though.
have a few keys, also included.

Box of Color Computer 2/3 stuff $150+shipping
Speech Synth, CC-80 Synth, Blank EPROM cartridges (ROMPaks),Eprom burner,
Video Digitizer, books,docs,ROMpaks, software,magazines,coco2, pupo KB
interface, *ALL* kinds of stuff! Floppy controllers,floppy drives...
Don;t wanna part it out. Wanna sell it out in one lump sum.

Box of MicroChannel cards. $300/OBO
Serious stuff. Digi MultiPort boards, Comtrol MultiPort boards, StarGate
MultiPort boards, 3 IBM ARTIC boards (2-512K, 1-1MB)(those are $250+/ea
USED),
IBM 2M VRAM XGA,Orchid RAM board, IBM RAM board, Future Domain SCSI
controller,
ALL kinds of stuff in that box!!!

DigiChannel/CX EISA system $400/OBO
with at least 32-Ports, possibly 48-ports. Doc's are there. works fine.

(74) 1MB 30Pin SIMMS for Mac (No Parity)- Offers?

Apple 2GS ROM-03 $300/obo
4MB RAM Card
Apple HS SCSI Card
External 80MB Hard Disk
Keyboard, Mouse, RGB Monitor
(2) 3.5" floppies
(1) 5.25" floppy

Apple MacSE $300/OBO
4MB RAM
80MB HD
Keyboard, Mouse, Power Cord
Runs Great, Looks OK.
Decent Packet Station. Used as one, now I use Unix.

Kantronics KPC-2 $75/OBO ***Local Deal Pending
Version 2.80 ROM (can be upgraded)
additional ROM: Kantronics G8BPQ Kiss ROM
Manual, and 2.80 addendum
HT cable, wired for Icom IC-W2A
AC Adapter
Runs good. Used until I got an MFJ 1278

Things I need/Want to buy/trade for:

1.Kenwood TSU-7 CTCSS Decoder board for TM-732A 2m/70cm Mobile
2. access. for Yaesu FT-50R (FTT-12 Keypad, batteries, quickcharger,etc.)
3.Yaesu FT726R/736R, Icom IC-820H/821H, Kenwood TS-790,
or other Full Duplex Satellite station
4. Ten-Tec TKits: 1220,1230,1260 (2m/1.25m/6m) (pref unbuilt, but built
OK)
5. "personal" (non-repeater) phone patch/autopatch.

If you want ANY licensed amateur's address and phone number, do a search for QRZ on the web. Once there, you can input the callsign, and instantly get the info you want. Beware, that sometimes weird people use others' callsigns. Please be careful not to flame an innocent bystander in the process.

Good luck, and please think before you act harshly. The net is fun, and some people just are 'that way'.

Message-ID: <5ellul$670@news3.realtime.net>
Source record: 182373

Yup, the 756 does not save offsets, CTCSS codes, or any of the stuff
that you are used to with a VHF/UHF rig in memory. I think this is
because the guys that design the HF stuff don't work with the VHF/UHF
people. The technology is different after all. It's only when they get
together that we will see all of the features of a high end HF rig
with the incredible programmability of the 2m and higher rigs. After
all, to save all the operating modes take only a few bytes of EEPROM
memory and costs pennies to implement.

Oh well. I love my 756 on HF, but don't like the 6m FM area, because
of the memory limitations. When the band opens on 6m, maybe they will
design a 756+ that does what we all want and expect.

Mine had done this, too. But the suggestion to "replace the VCO" is overkill.

Mine had a bad solder joint or PC board trace in the area of the shielded VCO. I dug out all of the material, resoldered everything, including "flowing" all of the traces with solder in that area, and it has been fine ever since. I think it was the VCO inductor that appeared to have the bad joint, if I remember correctly.

These are nice rigs. The new ones should be as simple. Good luck.

One often has to consider that things may not always be as they seem, particularly when Local QRPers are asking questions. Absolutely. We had been to an annual get together a few weeks back and it was a mixture of traffic types, those who like to tinker and build homebrew gear, and of course, DXers! DXers are drawn to other DXers and no gathering of the amateur fraternity has ever proven this otherwise . . . it is one of the Inevitable Truths of DXing. Believe that, for it always has been.

We were sitting at a table with a few of the true blue DX types, talking about the Great Days of DXing and the imminent arrival of cycle 23 when one of the Local QRPers came along with his tray. He spied the one empty seat, and being a Seeker of Knowledge, this QRPer sat down and began right off with a question: "If you guys were going to build a linear, what kind of tube would you use?" he asked, looking quickly from one to the other. No one answered for a moment, then one of the big guns shrugged and replied, "Well, I guess I'd probably go with a pair of 3-500Zs . . . they're pretty rugged and not that expensive." The QRPer nodded and waited. "8877s are good tubes too." another of the true-blue types offered. The QRPer had pulled out his notebook and was writing all this down. QRPers keep methodical notes, especially when they are driven by a single purpose. Remember that. A QRPer on a mission is dangerous. Never let your guard down.

"And what about you?" the QRPer said, looking straight at us, "What would you use?" We thought for a moment, then replied: "Either of the two mentioned are good choices" we said carefully, "and the we are hearing good reports about the 4CX1600B too . . . 50 watts from the exciter will get you 1500 out. But none of us are really considering building an amp right now." We got nods of agreement from around the table and we decided to pursue this a bit further. This QRPer had an agenda and we had to know more.

"Why are you so interested in tubes?" we asked. The QRPer took a bite of his lunch and looked at us carefully, then did the double take and answered our question with a question. "Let's say someone wanted to double up a pair of those 4CX1600Bs. How much power would you expect from 100 watts drive? Am I correct in assuming that if 50 watts will generate 1500 watts, then a pair of them will put out 3 kW?" We weren't sure where this was leading and we were getting a bit out of our league. "We've never built an amp" we replied, "and a lot of this depends on the design and efficiency of the components involved. In theory, you're probably right. But what's the point? You can't run 3 kW anyhow. You'd be cited for excessive power and if you kept it up, you'd be off the air." The QRPer glared at us with his beady little eyes and ploughed right on. "Yeah, yeah, I know all that" he said, wiping a bit of sweat from his upper lip, "but let's say you could do it, what would be the best way? Get three, maybe four of those killer

1500-watt tubes and try to drive them with the exciter, or build an intermediate with a single 3-500Z and use that to drive the final? And if someone was to do that, use an intermediate amp, would 5 kW output be possible?"

Son of a Gun! How does one answer a question like that? It was obvious we had a QRPer who had done a lot of thinking before asking. So we did the obvious. We excused ourselves, and hauled this Seeker of QRO Knowledge over to the table in the corner where the Old Timer was sitting with Red-Eyed Louie. The Old Timer had built his share of amplifers and the QRPer repeated his question, referring to his notebook and getting ready to write. The Old Timer leaned back in his chair, looked up at the ceiling for a moment and then looked back at the QRPer. "What we have to answer here" he said, "is not how, but why." The QRPer looked puzzled as the Old Timer continued. "Now, you were by the other day and you were complaining that you had missed Heard Island. Remember how you said you called and called for hours and they never came back to you? And I told you that the reason they didn't come back to you was because they didn't hear you? Do you remember that?"

"Exactly!" the QRPer replied in an excited tone, "and I listened to your advice too. You guys are always telling me to remember what Albert said: That all things are relative, some more so. So I did my homework, and I researched as much of Albert's work as I could find. And I believe I have found the answer. Everyone knows of the famous equation, E=MC squared, right?" The Old Timer simply looked at the QRPer without saying a word. "Well" the QRPer continued, "I found the pages of complicated equations that Albert used to derive that formula . . . and in there, buried among the integrals and complex formulas is the answer! I now know the reason I missed Heard and how I can prevent it in the future! It has been there all along and no one noticed it:"

E (squared) = DX

"It's obvious that E is the plate voltage! And if you square the plate voltage, you will certainly increase your output power. Albert was telling us that the more power you run, the more DX you will work. Why didn't anyone notice this before?"

The Old Timer looked at the QRPer, then at us, and then turned back to his meal and his conversation about DX spots with Red-Eyed Louie. It was clear he wasn't going to comment. The QRPer looked at us for a moment, then asked, "What's wrong with him? Is he jealous because I've discovered one of the Mysteries of the Ages? I bet that's it! Maybe even with that cloud of aluminum he has over his shack, he missed Heard too!" We walked over to the door with the QRPer and patted him on the shoulder as he was walking out: "You're probably right", we said quietly, "and when you get that amplifier built, let us know how it all works out." The QRPer nodded in agreement and trotted off down the street, determined to get his order in for as many tubes as he could sneak by the XYL's budget."

When we returned to our table, we were deep in thought. While we were convinced most true-blue DXers ran maximum power, and some maybe even a bit more, we couldn't shake this picture of blasted coax, fused elements and TVI complaints! Somehow, we didn't think that Albert was referring to plate voltage. And while an extra kW will get you an S-unit or two, we had the feeling that knowing the DXpedition was working split might help too.

I just picked up a F40 LT, 440-470. Wont recieve 480+ or transmit.. Do
I have a bad unit, or will it REALLY only do 440-470? Was told by
someone who had one that it SHOULD. Have computer programming kit..
Thanks.

Burt, this is we will AGREE! I have nothing against the "hobby"
aspect of it, BUT I really dislike people relegating it entirely to a
hobby. I am a member of the Amateur Radio Service and am proud of
that fact. Its when to many of us forget that fact that all these
dire predictions we keep seeing will occur.

I have a 3 week old new condition Kenwood 570D with DSP and built-in AT. I have 2 of them and was going to put one in mobile and then nixed the idea. I will sell it for the best offer
or consider a mint 850SAT or 940SAT or 450SAT or TS50 plus cash. Also interested in ICOM 751A.
Also interested in trading up the 570D plus cash for a Icom 756 or Yaesu 1000MP.
Please e-mail if interested or call 201-328-3581.

Jim

Hi Doug ...

Sounds to me like you are describing the Amecon PT-3 ... Winter
1996/1997 AES catalog says:
"Covers 160 thru 6 meters*, useable with either a receiver or
tranceiver. Tunable low noise dual gate FET circuit provides more than
20 db gain with low noise figure and imporoved spurious and image
rejection. RF sensed switch with variable delay automatically bypasses
to the antenna on transmit. Second receiver and antenna capability.
12Vdc. 2 1/2"h x 8 3'4"w x 6 1/2"d. "

* - covers thru 54 MHz, even though your '430 doesn't!

An AC adaptor is available, or you can "steal" power from your 430
supply.

Available at most major amateur radio dealers.

73 to all!

A very good solution to this problem is the "notch filter"
manufactured by PAR Electronics, which puts a very deep (45-54 db)
notch at 152/153 MHz, which is where a great majority of the pager
transmitters are. It exhibits approx 0.5 db inband loss, and has an
insertion VSWR of 1.25:1. It's available in two models - one with
SO-239 connectors in and out, intended for base station/mobile use,
and the other with a BNC female one side, BNC male on the other,
intended to sit directly on top of a handheld.

Available at most major amateur radio dealers.

73 to all!

Owens Lake Radio DX and Astronomy Expedition
Brian Webb, KD6NRP
102670.1206@compuserve.com

On Saturday, March 1st, I plan to take a trip to the eastern side of Owens Lake to perform experiments with very long wire antennas, photograph artificial earth satellites, and observe faint astronomical objects.

My plan for next Saturday is as follows:

07:00 Check weather forecast for Owens Lake. If good, begin packing
08:00 Depart Thousand Oaks
13:30 Arrive at east side of Owens Lake
13:30-14:00 Locate suitable site
14:00-14:30 Deploy either two 1200 ft or one 2400 ft long wire antenna
14:30-15:15 LF and MF reception experiments
15:30 Rendevous with latecomers at the intersection of routes 136 and 190
16:00-18:00 LF and MF reception experiments
18:30-19:45 Photograph artificial earth satellites
19:45-????? Astronomical observing

I'm looking for others who may want to drive up to the site with me or meet me there. I'd be leaving the Thousand Oaks area at about 08:00 and arrive in the vicinity of the site at about 13:30. After a few hours of photographing satellites and deep sky observing, I'd pack up and head for home (I might consider getting a hotel room and staying until Sunday morning).

If you're interested in joining me, contact me at my e-mail address.

Dana...

The reason why I did bring this up is because of the fact, that anytime a radio is modified to cover a range of frequencies other than those it was specifically designed to do in both it's receiver and transmitter chains, performance of ALL filters are degraded.

Unless extensive modifications are made to those chains, it's likely that the signal transmitted will lack the spectral purity the radios which are designed for the service would have. As for the receivers? They too would usually would suffer some performance characteristics as well.

Again - it is poor engineering practice to do this.

Hello,

I am from california and this is a rather large item(s) so pick up is
Prefered.

I am selling my satellite station to pay for school.

TX/RX
FT-726R: (2m,430,6m,sat unit) (Just serviced at yaesu so A-OK)
With external tone encoder (For mir)
AMPS
Mirage 1010 UHF amp (10watt in =100 out)
Mirage 1070? vhf (I am not sure on the numbers but its 10w -> 70w.)
PRE-AMPS
VHF Lanwheir pre-amp (Very sensitive low noise..they are hard to find,
but it might be worth looking it up for the specs...they costed about
$150 each)

UHF " "

ANTENAS
KLM-435-40CX (40 element circ. polarized beam for uhf)
KLM-2M-22C (22 element circ. poloarized for vhf)

MISC:
Yaesu 5600 azmuth/elevation rotor (similar to the 5400 but "heavyduty")
2 30 foot runs of 3/4 inch hardline with conector etc.
fiberglass cross boom re-inforced with a hardwood dowel
20 foot tower
All the conectors and misc coax needed to hook up the amps,pre amps,
radio and antenias together.
2 50 foot runs of rotor cable

To buy all this stuff new would cost a small fortune.
E-mail me for offers.. I am looking for about $2000 you pay shipping or
pick it up in california (Bishop, ca)

April 1 - 3, 1997

Ritz-Carlton Hotel
San Francisco, CA

---
a pulver.com conference

"The Voice of Telephony on the Net -
shaping the VON industry since its inception"

SPONSORS: Microsoft * Compaq * Lucent Technologies * Intel

April 1-2 April 3
Conference Workshops

WHO SHOULD ATTEND?

CEOs, Presidents and Managing Directors of companies implementing VON technologies; PTTs, PTOs, RBOCs, LD/IXCs; Internet Access/Service Providers; Telecommunications companies, resellers; software companies; PC manufacturers; Venture Capitalists, Investment Bankers, Management Consultants.

KEYNOTES: April 1 & 2 include:

Vint Cerf, MCI Telecommunications
David Farber, University of Pennsylvania
Ron Vidal, MFS Worldcom
John Ludwig, Microsoft
Mike Po, Netscape
Joe Mele, President, elemedia
George Favoloro, Compaq
Neil Starkey, DataBeam Corp, IMTC
Colin Harrison, IBM Zurich
Denis Aull, Lucent Technologies
Mark Fisher, Pacific Bell
Scott Adams, creator of Dilbert

BREAKOUTS: April 1 & 2 include:

Internet Telephony Forum

Review of Current Technology Issues
Effect of Internet Telephony on Business

NextGen Telephony
Fax over IP: Corporate Internet Solutions
Patents & Speech Coders
Internet Telephony & Consumer Entertainment
Business Opportunities

Webcasting

Streaming Technologies & Trends / Issues
Developing Audio/Video Content
Realities of Net Broadcasting
Content Push/Pull: NextGen of Content Delivery
Business Conferencing

Regulatory

Access Charges
Internet Telephony as a Global Norm?
Local Loop Alternatives: Promise or Reality?

WORKSHOPS - April 3

Post conference workshops will be offered to conference
delegates. See the website for additional details and fees.

LUCENT * COMPAQ * DATABEAM's H.323
* INTERNET TELEPHONY GATEWAY WORKSHOP *

You mean the "(tech+ for 20+ years)" (see above) that I place *after*
your sig? That's no forgery or alteration, Carl. If I place a ">" prior
to it, then it certainly would be an alteration.

I append it due to your strange attempt to associate code ops with folks
who don't know how their radios operate, yet you claiming to be a state-
of-the-art engineer still hold an entry-level license after two decades.
I'm not the only counter-example (code op and builder) to prove your
claim false; most of the guys on the QRP list are also in that same
catagory.

You still haven't answered my long-standing question: What radios do
you operate on the air that you've built yourself? No fair scolding
the amateur community for not building if you yourself don't build.

Speaking of altering posts, why is it you alter my headers? You
constantly delete the "Followup-To: rec.radio.amateur.policy"
line I add to my header. Bad boy.

The BBS for which I'm a co-sysop has been on the air for about 8
years, and in all that time we have never locked one legitimate ham
out of the BBS for any reason. We've handled dozens of Burt's
rantings, as have all the upstream SysOps, obviously. Burt loves to
tar hams with a broad brush, but he gets more on himself than he does
on others.

A question rather than a solution (sorry!). I have a 95 Suburban and
have a noise problem, too, but don't know WHAT is causing it. Maybe it
is the fuel pump problem? What are the symptoms of the fuel pump noise?
My problem is spurious 'carriers' that come and go at different
frequencies. That is, after 2 or 3 minutes, a clear frequency gets a
'carrier'. Conversely, after a 5 to 30 minute period it FADES and goes
away! I thought this might be more related to the computer?? It occurs
in the 2M band and in the 150 - 160 PS band. Any ideas??

Let's rewind a little here. Someone said "I want to use my ham radio
in the land mobile/marine service". You responded with:

> It is not impossible to do it... But it is not good engineering practice.
> Amateur Radio equipment is not type accepted for marine use for a reason;
> they are not as clean on the output as the type accepted ones are.

I followed up with a comment that reason that amateur gear is not type
accepted for marine service has to do with how operating frequency
is selected.

What is wrong about this statement? Why are you "questioning my
relevance" in this discussion?

>Unless extensive modifications are made to those chains, it's likely that
>the signal transmitted will lack the spectral purity the radios which are

>designed for the service would have. As for the receivers? They too would
>usually would suffer some performance characteristics as well.
>
>Again - it is poor engineering practice to do this.

Perhaps, and then again perhaps not. First of all, the transmitters
I've looked at tend to use bandpass and lowpass filters; a radio intended
for use at 148MHz will probably have reduced output above 150MHz. It
is conceivable that the carrier level would drop more rapidly than
the harmonic levels, resulting in a degraded harmonic suppression
when measured relative to the carrier. However, with the drop in
the carrier level, it is more than likely the harmonic output
would be at a lower absolute level than if the radio were being
operated in the 2m band it is designed for, which suggests the
potential for interference is not degraded.

It is well known that many amateur transceivers suffer poor receiver
performance outside the amateur bands. However, there's nothing
in 47 CFR that require type acceptance for marine band receiver.

Don't overlook the fact that some amateur radios *are* designed for
wideband use, and are then configured for a particular country. Looking
at the service manuals for several radios I've seen just this case - my
TR-2600A actually has extra circuitry to insure operation from 140-160
MHz, and this is enabled in export to certain countries. The IC-2000H
is similar, as well as many others

So, while some radios are indeed not good performers outside the
amateur band, others are. The potential for interference that
type acceptance attempts to address is interference caused by
improper selection of operating frequency and mode, not dirty
emissions or poor receiver performance. Technical standards
for emission purity exist regardless of type acceptance standards.

If I am in error, please feel free to show me exactly where.

>some way that this danger is handled, since so many vertical antennas are
>in daily use by SWLs and hams.

You have to provide a path for lightning currents to be diverted to Earth in such a fashion that they don't go into your house and your equipment. This is, of course, easier when you use an antenna design which is bonded directly to Earth, the so-called plumber's delight beam is one example, a shunt fed vertical is another. Sometimes there are reasons why you want to, or have to, isolate the antenna from direct Earth connection. That makes the lightning mitigtion job a bit more challenging.

In cases where the antenna must be electrically isolated from Earth, you have to use a controlled discharge device. This is basically a spark gap designed so that normal operating voltages won't fire it, but so that the higher voltage of a strike will. The simplest spark gap is just an air gap, but because of varying humidity and air pressure, an air gap's firing potential is ill controlled. The better approach is to use a special gas tube. These tubes are manufactured with precise gas mixtures and pressures to ensure a very predictable firing potential. You want to select a gas tube which has a firing potential just above the normal transmitting potential at the point of insertion. The suppressor should fire very quickly, in less than 2 nanoseconds, and should become a *very* low impedance when firing (typically on the order of

a few milliohms). Polyphaser makes suitable suppressors.

Now lightning energy is *RF*. The energy of the pulse is distributed over a very wide frequency span from ELF up through UHF, but most of the energy is concentrated in the range below 2 MHz. There is so much energy in the lightning discharge, however, that you can't ignore the higher frequency components. This presents quite a challenge for antenna protection because of the many possible resonances in the antenna, antenna support structure, feedlines, and lightning downleads.

There will be nodes of high voltage and nodes of high current distributed over these conductors by the lightning discharge. Since the lightning energy spans such a large frequency range, the number of such nodes is huge, and it is impractical to analyze them all. However, there is one which is of interest. The suppressor you install should have a firing time on the order of 2 nanoseconds, so we are interested in the voltage and current distribution at a frequency of f = 1/t or 500 Mhz.

If practical, we'd like to install the suppressor at a point which is a multiple of a halfwave at 500 MHz from the antenna tip. This will put it at a high voltage node for the strike during the period when the gas tube is building to firing potential, assuming it is the antenna tip which is struck. That's good because it will allow the largest differential between the required hold off voltage of the suppressor due to your transmitted signal and the potential generated by the lightning discharge. In other words, it maximizes the margin for the suppressor.

In your case, it is more important to put the suppressor directly at the antenna feedpoint, because that will be a current node for your transmitted signal on 20m, and will maximize the margin to a greater extent than if we ignored that and located the suppressor back down the line where it would be at a lightning maximum. There is a "sweet spot" a few inches back from the antenna base where the highest differential will occur, but anywhere within those few inches will suffice, and we might introduce extra unwanted inductance in the lightning path by locating the suppressor back from the feedpoint too far.

Now inductance is the killer in the path to Earth. We want to minimize that to every extent possible because it will act to elevate the suppressor above Earth during the strike. And that will elevate your coax shield, which will elevate your equipment, and that allows a large current to flow through your equipment to *its* Earth connection.

Ideally, your feedpoint will be directly at ground level, with an essentially zero length path to Earth for the suppressor. Even a few feet of straight wire will have sufficient inductance

to elevate the coax shield. So keeping this path short and straight is vitally important. (Obviously, any bends in the downlead will add inductance.) The lightning downlead must be at least #6 wire, but a flat copper strap has less self-inductance and a greater skin area for a given amount of copper, so that's even better. Note do *not* use braid. It has a high self-inductance and a high skin resistance compared to smooth solid strap.

OTOH, we'd *like* to have some inductance in the feeder going into the shack. This will raise the impedance of the path for lightning currents trying to reach your station ground. Coil a few turns of the coax into a choke balun near the feedpoint to provide this inductance. The phone company uses a half turn loop, called a "drip loop" for this purpose in their installations. We'll use a few more turns here.

Now this is all standard stuff, but you have another problem with your installation. As I understand what you said, you're going to stand the element up next to your house. This introduces the possibility of *sideflashes*. Sideflashes occur when the impedance to Earth is lower through some other structure than through your intended downlead path. This can happen because of the resonance effects noted above, and because of plain inductance in the downlead path. The rule of thumb is that all conductors carrying lightning surge should be at least 5 feet from any structure not intended to carry surge currents. So be sure to stand your antenna off at least that far from the house.

If I've misunderstood, and you intend to mount the antenna on the roof, then you've got to be *very* concerned about downlead inductance. Keep it straight, keep it wide, and keep it short.

Lightning can be considered to be a constant current source with a current on the order of 8000 amperes. The potential backing the constant current source, IE the cloud to ground potential, can be many millions of volts. There is no practical way to insulate against that. When you try to impede that current flow, due to resistance or inductance in the current path, those millions of volts will express themselves across the impedance and drive sideflashes. That's why it is so vital to minimize inductance in the downlead, and why you need a large standoff distance to other structures.

As a final barrier, be sure to use a suppressor in the coax at the station entrance bulkhead. This bulkhead should form the *ground window* for your station. A ground window is the point to which *all* conductors entering or leaving the station area are tied, either bonded directly if nominally of ground potential, or tied via a suppressor if they carry operating potentials. This includes *all* conductors, including station AC power, the telephone line if a telephone is in the station area, any CATV line, etc. The ground window serves as the

station *single point ground*. It is then tied in turn to
a good Earth ground via a direct low inductance path.

The purpose of the single point is to ensure that if the
station's nominal ground potential becomes elevated during
a strike, all conductors become elevated roughly equally.
If there is no potential difference, there can be no damaging
current flow through equipment attached to those conductors.
Note that all conductors entering the station area must be
tied to the ground window *first* before going on to the
station equipment. And don't create daisy chains inside
the station. All equipment grounds should go directly to
the ground window. Bypassing the ground window with just
one wire will negate its protection.

The latter can happen all too easily. For example, if you
run an extension cord into the station area "temporarily"
instead of using conditioned station power which has entered
the station area through the ground window, a strike can fry
all your equipment, even though you've done everything else
right.

I wonder why, whenever anyone gets into this big type acceptance issue of using "Amateur on Commercial Freqs", nobody ever asks why so many of those damn Commercial radios that everyone has on the ham band is never mentioned. They are not type accepted for Amateur use either. Spectral purity, out of a commercial Maxon-Regency-Uniden, not very likely. The real issue, people using $300 keyboard programmable radios for their plumbing business rather than going down to the Local Moto shop and buying a $800 GP300, thats it, plain and simple, and is probably the biggest part of the "Type Acceptance" equation.

One of you is right, it is simply the keyboard programmability that keeps the amateur radio out of the commercial band, as far as type acceptance is concerned. A Moto JT1000 has a UHF bandwidth of 403-470, as does most Yaesu FT50s, filtering, or lack there of is virtually identical, like in zilch. But the JT supposedly takes a rocket scientist (i.e. 2way tech with a key) in order to "keyboard" program the thing, while the Yaesu takes someone who can read. Type acceptance of the Icom U/H-16 portables (commercial) was temporarily suspended when FCC found that anybody could actually keyboard program the radio, and reinstated when Icom made the access to the keyboard more difficult for the end user. Yet, this very radio was sold in amateur radio service as a Icom 02AT and O4AT, and check a schematic and parts list, they are identical in every way except the software, which allowed easy keyboard entry. Harmonics, intermods, and selectivities, had absolutely nothing to do with the type acceptance issue, only the ease of frequency moving, and of course, the commercial U-16 sold for several hundred dollars more that the 04AT.

So basically, when the FCC knocks at your door, then and only then does it really matter. And if you actually have a license for the frequency(s) you are using the "unaccepted radio" on, the penalty will be worth the savings.

Some fun reading, check out the NOIs and NPRMs over the last several years regarding type acceptance issues, and take carefull note of who it is that is petitioning the Commission for most of the changes (stricter) changes, and you will find a lot of Schaumburg and Lynchburg addresses.

I AM CORRECT! IF YOU CHECK OUT THE WEB PAGE
http://www.yaesu.co.jp/news/index.htm

you will see that the suggested list price is 198,000 YEN. You have to
"CLICK" all the menus to get to the price/spec sheet. It is there.
I then went to the "GENERAL YAESU WEB PAGE" to get the price list of
existing models. It appears that the prices in this catalogue are "LIST"
price. The street price is 80% of it. Then I converted the Yen to Dollar
(the current exchange rate is 118 Yen to the DOLLAR). The final price

was always what I would see in the "AES CATALOGUE".
I was told this by another Ham in the business (DEALER). I also could
not believe the radio would sell for such a low price. I figured the
radio is a step above the Kenwood TS-570S and a step below the Icom 756.
Check out my figures and the above Yaesu WEB page.

Source record: 182167

Gary,
Theres plenty of drive to use the Heil HM-10. I use a HM-10 Dual on my ICOM 775DSP and it works just fine. You just have to get used to turning your mic gain up higher than you do with other radios. Most Icoms mic amps do not have the gain of other rigs. With Heil mics it is necessary to "close talk" them. I wouldnt use anything else. I tried the Icom amplified mics and did not like them, I could run the rigs mic gain lower but audio not as good. Turn the mic gain up till you break ALC voltage and enjoy.

The FT-50 is now available only with the FTT-12 keypad.

Thomas Gasta <tomgasta@worldnet.att.net> wrote in article
<5eo5uh$8ku@mtinsc04.worldnet.att.net>...
> At the Hamfest today, 2 companies were selling FT50r-D version radios.
> They claim, and R and L in Cincinnatti confirms, that Yaesu is now
> offering an FT50r with the FTT-12 keypad already installed. The price
from
> R and L was $369, but, they were quick to point out that it was a rip-off

> since they sold the FT50 plain for $299 and the FTT-12 for $56, and added

> the free battery.

How can this be a rip off when the regular price of the FT-50 was about
$325 before Yaesu offered special to the dealers of $20 off the current
dealer price.

>They also pointed out another quirk in this new
> "offer". The price of the radio reflects the normal radio cost plus the
> FTT-12 (seemingly no charge for the huge labor involved in installing
this
> plug in keypad), yet, now that the standard FTT-11 keypad is not on the
> radio, wouldn't it seem that the cost should reflect this. Some places
> advertise the standard keypad for $30, yet there is not a thirty dollar
> "credit" for not having this board at all.

It is interesting that they are selling a keypad that is not even available
from Yeasu. Where did these keypads come from.

>So in essence, you would simply
> be buying an FT50r and the optional keypad, but would not have the
> original keypad as a "backup".
>
> Once again, another marketing genius just didn't quite get it!
>
Yes the marketing genius did get it. He got Yaesu Japan to lower the price
of the FT-50 so that when the FT-50RD came out the price would only be
slightly higher than the original price.

For example:
FT-50R/wFNB41 323.00 original price
FT-50R/wFNB41 299.00 sale price
FT-50RD/wFNB41 347.00 regular price. (contains the FTT-12 keypad)
These prices are based on our prices at RT Systems Amateur Radio Supply.

We are the 2nd largest independent Yaesu dealer in the US.

Rod,

Your prices must be better than most. I have been able to buy FT50s with the FNB41 from several places, Texas Towers, R and L, etc for $315 for at least 6 months now. The FTT-12 runs anywhere from $55 (r and L) to 59.95 at Universal and AES. So have been able to buy FT50Rs with FTT-12 for around $370 to $375. Lately FT50Rs are $309 and now $299, but forgetting that, R and L and another outfit at the hamfest was selling the FT50D for $369 and $365 respectively. That is a savings of $1 tp $5 dollars over doing it myself. My question is, from Yaesu parts as of 5 months ago, the FTT-11 was $32 to replace. If the FTT-12 is $55, the cost difference is $23. Therefor the cost, at the most, for a FT50D should be $330 to $340.

Other than your just mentioned price, people seem to be selling them for $360-369, which, without the free FNB49 (useless as that battery is), is certainly no way near as good a deal as buying the parts seperately.
I think it is a great idea to include the FTT12 on all new radios, if that is the goal, but I just don't want to see a price difference that equates to higher than before, just because they are adding the keypad at the factory. Your price reflects a reasonable price for the new model, the others I have seen most definately do not.

So as a warning to buyers, shop around, remember that several places are offering a free FNB49 battery with purchase of original FT50s that are already discounted to $299.

Tom

PS

Marketing genius!

You don't lower existing prices over several months, and then try to sell something new on what the prices used to be many months ago. A real genius would have held up the price of the FT50R, or even increase it a little, so that they could then come out and say, for only $10 more than the current price of a plain FT5O, you now get them with the FTT12 already installed. That would seem to be a deal.

This may not be power related noise. It is possible you are experiencing
a static discharge problem with the treadmill belt. Try a static discharge
brush on the belt. You can make one from a piece of coax braid fanned out
to form a brush. Let that rub against the belt, and ground the other end
to the chassis. You can also try an anti-static spray product on the belt.

This sort of thing crops up occasionally, mostly in winter, due to the
low indoor humidity. The belt acts like the belt in a Van de Graaf
generator.

5074. Why buy QRP version? (Was FT-920)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-23 00:00:00 UTC
From: AL7OQ <mfeldmn@ibm.net>
Message-ID: <3310D347.138B@ibm.net>
Source record: 182175

Steve:

You're wrong on this one! It's not a matter of limiting options, it's a matter of power consumption. The attraction of "true" QRP rigs is that one does not need to
supply the bias current for the larger PA. A 100 watt rig turned down to 5 watts will still typically draw 4.5 amps on transmit. A rig like the Ten Tec Argonaut II (the
lower power cousin to the Delta II) draws less than one amp! Even on receive, power draw for a full power rig is excessive for portable or battery-powered
operation.

This explains why the Kenwood TS-130V (10 watts, 15 yrs old) retains it's value far better than the 100-watt TS-130S. I would gladly pay THE SAME PRICE for
the 10 watt version, rather than the 100 watt version. Most avid QRPers would, which explains why rigs like the Index Labs QRP Plus or the Ten Tec Argo are
still on the market.

The 130V probably has the SAME receive power consumption as the TS130S,
so I cannot agree entirely with this line of reasoning.

The 10 watt japanese rigs are all related to an entry level class of license
in Japan that has a 10 watt output limit. EVERY JA HF rig I've seen for sale
in the US is offered in Japan as a 10 watt version. Certainly you have better
power efficiency in transmit (no finals to keep biased on during transmit) but
in receive mode they're no better than the higher power rigs.

In my Plymouth the FM radio generates what sounds to be a carrier on
certain UHF frequencies when I am tuned to certain FM stations. These spurs
are constant though. My experience has been that electric fuel pumps
generate a distinct motor type of hash.

This thread is morphing from jamming to immunity, but....

Peter, you talk of realism. From my personal experience, most USA grade consumer electronics will crap out at about 5 Volts/meter. (This may now be starting to get better, as manufacturers design to meet EN standards and use the same design for USA.)

You say an HT "easily" exceeds 100 V/M for near field. Could you run me some numbers as to how strong the near field strength really is for, say, a 5 watt HT? (We are talking about an HT at 2 meters, with 5 watts into a ducky, right? Or maybe a cell phone at 1 watt at 900MHz.)

Now, let's move into your recommendations for immunity. Sure, we all would like our Gameboy to stand 10kV/M, but I think your eyeballs (and other balls) would pop like a bean in a micro oven at much lower levels. Ten thousand volts per meter electric field strength! No doubt over a frequency range of 10 KHz to 18 GHz. Have you any idea of what you are asking?

Can you tell me of any facility in the world that can generate even 1000 volts per meter over this range? If you wish to set such a standard, then you must expect that manufacturers world wide will be expected to actually TEST to that standard. ("Designed to meet" doesn't cut it in the world of RF immunity.) Do you realize the cost of all this testing?

(Mortgage the house and invest in RF amplifier companies!)

Finally, while I respect the capitalistic jingle of a cash register, I find your description of this instrument as "mission critical" to be absurd. "Mission critical" has an urgency which transcends "do you want fries, too" "Mission critical", to an engineer, means someones life is on the line; think night carrier landings or a shuttle launch or your anti-lock brakes or a premie incubator.

One thousand volts per meter a safe level for a cash register? So, just who will be standing at that register in that 1000 V/M field. Certainly not me. I have had the personal experience of 200 V/M whole body exposure. (If you must know, it's kinda pleasant at first, like a warm mellow feeling in your bones.) I can assure you that nobody would just stand there, looking goofy while they cooked. I can't say which way, or how fast, but run they would.

And now, 250 V/M for "all the other stuff". What can I say, other than "Read the above paragraph again!"

I'll close by listing my personal suggestions for consumer grade electronics. I freely admit that I am making a lot of sweeping decisions, but hey, it's MY list.

10 KHz to 500 KHz 2 V/M
.5 MHz to 1.7 MHz 10 V/M
1.7 MHz to 88 MHz 5 V/M
88 MHz to 175 MHz 20 V/M
175 MHz to 425 MHz 10 V/M
425 MHz to 500 MHz 20 V/M
500 MHz to 900 MHz 10 V/M
900 MHz to 2 GHz 20 V/M
2 GHz to 12 GHz 10 V/M
And further thought must be given to the bands used by vehicular doppler radar and the new wave of home communication and PCS stuff.

Comments / great thoughts / warm air invited!

Better yet, post in the rec.aviation.xxxx newsgroups. There are lots of pilots who bought radios who would be willing to sell them.

> radio is a step above the Kenwood TS-570S and a step below the Icom 756.
> Check out my figures and the above Yaesu WEB page.
He is the formula : Ft-900at costs 179,000 Yen. Multiply times 80%
and you get 143200 Yen "STEET PRICE. then you convert by multiplying
..00847 (current exchange rate) times 143200 = $1212.91 USA DOLLARS !
Now the FT-920 has a LIST PRICE of 198,000 YEN. Multiply times 80%
and you get 158400 YEN "STREET PRICE". Then multiply times .00847
(current exchange rate) and you get $1341.65 USA DOLLARS !
As I stated earlier if you go to the Yaesu Japan WEB PAGE you will
see the LIST price in YEN for all their radios. THE LIST PRICE for the
FT-920 is on its own web page on the top of the spec sheet !

This is the top of the line HT from Standard...and it works terrific.

I have the leather case...the 7.2v battery and charger...the alkaline case...the 12v power cord and the 100 memory chip installed.

I bought it a week ago thinking something smaller could be mounted in my very small car easier, but that is not the case. I have all the packing and box and the whole mess..Again I have only had it a week.

I will throw in a couple of sets of alkaline batteries.

Will sell for $500!!!

E-mail me with questions...

ICOM W2A 5W dual-band transceiver (2m & 70cm). Has extended
receive including 800MHz cellular. Excellent condition.
Comes with original box and manuals. Includes 1000mAH 7.2V
and 800mAH 12V ni-cads, 2m rubber duckie, dual-band telescopic,
HM-65 mini speaker-mike, CP-13 cigarette lighter adapter,
BA-11 bottom cap. $300 plus shipping

Diamond NR-770HA dual-band mobile antenna and K400 trunk mount.
Very good condition, includes docs. $50 plus shipping

Ramsey PA-10 2m power amplifier. Requires 12VDC @ 5A. 1W in
gives 15W out, 4W in gives 35W out. Includes manual.
Excellent condition, very low hours. $40 plus shipping

Comet CF-4160 duplexer, covers 1.3-170MHz and 350-540MHz.
Like new, includes data sheet. $20 plus shipping

Buy everything and $ave -- only $350 plus shipping. Plus I'll
throw in an MFJ-1702B antenna switch. Remember, prices do not
include shipping (from Chicago) ;-)

If interested, send me e-mail.

5092. Re: Nuts & Volts (don't subscribe)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-23 00:00:00 UTC
From: Jeffrey Pawlan <jpawlan@pawlan.com>
Message-ID: <33111FF2.167EB0E7@pawlan.com>
Source record: 182193
Cross-posted to: rec.radio.scanner,rec.radio.swap,rec.radio.commercial-lmr,rec.radio.amateur.equipment

The monthly Nuts & Volts is indeed still around. I do
want to warn everyone of my experience with their subscription
department.
I phoned at the end of November and asked to start a year-long
subscription beginning with the Jan.97 issue. Around Jan 10th, I
had not received my issue in the mail yet they were plentiful
(and free) at a local surplus house that advertises heavily in it.
I picked up an issue and the following week after still not having
received my subscription issue, I phoned them. I was told the
following facts:
1. The free copies are sent to stores and hamfests by UPS first.
2. A week or two later, the subscription issues are mailed to
paying subscribers by 3rd class which delivers in 3 weeks from the
date of mailing.
3. When I pointed out that the value of the subscription is in
having it very quickly after it is printed so that one has a chance
to respond to interesting ads, I was told that they would not change
the way it was mailed nor change the delay that they add to the
subscription copies.
4. Without any reasonable alternative and still no subscription
copy delivered to me, I called again and cancelled the subscription.
I was told that I would NOT get a full refund as they had mailed one
to me. She said that even if the copy never arrived, I would still
have to pay for it. I knew that this was not ethical and VISA would
not allow them to cheat me.
I disputed the charge to my VISA card bank and they will tell
Nuts & Volts that I must be refunded.
In conclusion, don't waste your money subscribing to Nuts & Volts
unless you simply don't have another way of getting a copy and thus
do not mind that the issue you get in the mail will be a full month
after they appeared in the stores.

73s,
Jeffrey Pawlan WA6KBL

Jeffrey's points are sound advice. I doubt the manufacturers will adopt a policy such as this since too many CBers or hams (seems the same now) are always looking to expand the frequency coverage of their radios, even for the flimsiest excuse. For those who are not professional RF engineers and techs: It is poor engineering practice to do this. And as Jeffrey pointed out in his message, price is no justification to do it. If you want to it as an experiment to learn - then do it. But remember that performance may not meet industry standards.

Hello Jason,

Yep, you're right. It's a 2 meter rig. It was a kit supplied with a NRI (National Radio Institute) correspondence course as a learning aid. The original design only covers a 2 MHz portion of the band and only has plus and minus 600 KHz splits.

I don't know how many actually made it on the air but a complaint I've heard more than once about this rig is severe synthesizer whine. Also the connectors used on the individual circuit boards that connect them to the chassis are very poor quality and can contribute lots of intermittent problems.

I have one that I built, and yes, it has these problems. From time to time I dust it off, clean up the connectors and tune it up just to see if it still works. If I get it tuned just right the whine is minimized. I still have most of the books (probably all, I haven't looked in a while). As I remember there were several books that dealt with the theory and construction but only a couple that were very useful after construction.

If the radio was in the estate it may be possible that all of the books from the course are still in the estate. All of the books from the course would fill a pretty good sized box. Just the books dealing with the 452 would probably make a stack 8-10 inches deep. As I remember the books are all 8.5X11 inches and typically about 1/4 inch thick. The covers are mostly red in color and should say something about NRI. If you can get back in touch with the person handling the estate they may be able to find the books if they know what to look for. If that fails get in touch with me via e-mail.

>
> John...
> WB4LNM@aol.com

I agree that the old Memorizers are great rigs. I have an FT-227R for 2meters, plus I also use an FT-127RA for 220mhz. Both are in near mint condition. The FT-227R may not have near as many features as my new FT-3000, but several other hams commented that the 227 has better audio quality than the 3000. My only complaint with the Memorizers is the lack of memories, plus mine sometimes lose the memory after they're turned off. Other than that, they're good, solid radios.

Hey Hershman ...

Where did you get that figure from? I just searched the Yaesu Japan Web page, and did not find any reference to price. (Or is that source another "secret" too?)

My feeling is that you are -way- off base on the price ... just looking logically, how could a manufacturer fill a box the size of the FT990 with all the things that appear to be in that box, at the price you mention?

My better estimate is that the US List Price will come in at $2000-$2200, and that the street price will be about ten percent or so below that.

Unfortunately, gang, I don' think that the predicted $1300-1400 price will ever be seen ... not even on invoices to Yaesu USA from Yaesu Japan!

It is a 2M rig, was part of correspondence course from NRI. They had quite a few kit projects designed to act as learning aids for the courses. I had a 452 and the matching? power supply, the synthesizer had a horrific whine that I am told was common, however mine also was an estate rig so I am not too sure just how true that is, might have been poor construction. I am glad that I found a buyer for it some time back.

Hello,

I agree with Stan. I think Kenwood uses too hot a GasFet in the front
end of the TM-733 which makes for good sensitivity but lousy dynamic
range. I have a neighbor with one and he is always complaining about
paging systems and intermod, while my Yaesu FT-5100 or Icom 2350 doesn't
hear all the junk. I would recommend either one of these. I am not using

a notch cavity by the way.

5112. Icom IC-756 phase noise clarification

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-23 00:00:00 UTC
From: morel.GRunberg@telrad.co.IL
Message-ID: <c=US%a=_%p=TELRAD%l=MISMAIL-970223102442Z-83@mismail.MIS.ELEX.CO.IL>
Source record: 182213

I saw a lot of messages on this reflector reporting on IC-756 phase noise problem. Unfortunately no one of the guys reported what are the figures for this important parameter and how did check it. The phase noise can be correctly checked only in RF laboratories with a special test set-up (including a special mixer, an extremely clean signal generator and a LPF/HPF combination) and not only with a spectrum analyzer. With all the respect, this equipment and the necessary knowledge are available only at very few ham shacks.

I would like to see what are the dBc/Hz figures for 2, 5, 10, 15 and 20kHz offset and to compare it with rigs of similar price tag (abt. 2.4k$).

As far I know, they are no agreed requirements for amateur market, but for a 2.4k$ rig figures like -115dBc/Hz @2kHz offset or -125dBc/Hz @20kHz offset are not so bad. Better figures are usually requesting large R&D investments in design concept and specialized components. This can be a problem in today troubled shrinking amateur market with very short lead time to market and difficult competition and is also one of the reasons behind the large numbers of firmware, software or hardware "bugs" or poor human-engineering present at first series.

The special lower introductory prices are not free: the first buyers are doing on their own expenses the field site test instead the manufacturer and this happens with high-end rigs too (>4k$).

Maybe one of the people claiming this problem can share with us his test results for a better understanding of the problem ?

From: AL7OQ <mfeldmn@ibm.net>
Message-ID: <331068AF.5F48@ibm.net>
Source record: 182226

Al,

Ted has obviously never owned an FT-290RII, and is, unfortunately,
showing off his ignorance. The radio has TWO antenna connectors, a BNC
in the front for portable use, and an SO-239 in the rear of the
amplifier for mobile use.

When mounted in the (supplied) mounting bracket, the rig can be set up
two ways, to come out of the bracket intact, or to detach the rig from
the amplifier, leaving the PA in the bracket permanently. This way, you
can then attach the main body of the rig to the optional battery pack
for portable operation, and simply slide the front half back onto the
amplifier when you're done. Very convenient.

The rig design is OLD... the receiver really hasn't changed since the
original FT-290R, making it early '80s technology. It's OK, but you'd
get better performance from a Kenwood TM-255A. Of course, that rig
retails for $929. Another disadvantage is the PL board for FM use,
which is a dip-switch programmed (optional)board mounted on the back of
the main unit. This means you cannot program different PL tones in the
different memory channels, only turn the PL on and off from the tone
switch on the front. If the rig will be used in a major metro area for
FM as well as SSB/CW, this may make it a poor choice, and the TM-255A a
better choice.

There is an aftermarket Mutek front end for this rig, which is sold by
SSB Electronics in Mountaintop, PA. With this mod the receiver is HOT,
and will meet today's standards, but then the cost exceeds the Kenwood
by quite a bit.

If you plan on doing portable operation, the convenience of the rig
can't be beat, and it's well priced, as you've pointed out. However,
for mobile/base operation, the Kenwood is a better choice.

73,
Martin

I ran into the same type of situation last year. (My new car was a 1995
Thunderbird) At Dayton I saw and compared the offerings from Icom,
Yaesu, and Alinco. I came home with an Alinco DR-610T.

I have been pleased with it. If you are satisfied with your 570, you
might consider the 610T.

I have the full setup for an Excalibur BBS with additional software and accessories. This includes almost 200.00 worth of screen sets and other software. Want to swap for amateur gear.

This is windows bbs software, 2 node version with everything included. Will swap for like value amateur gear. Looking for a Th79AD or similar.

I have an Alinco DX70T and tried to install it in a Isuzu Rodeo. I get an S20 noise figure and am unable to resolve it. I need some Ideas.

The Radio Power is Connected to the battery and ran under the vehicle to the stick shift where I bring it into the vehicle. The noise doesn't change with the control head attached or remoted. I've tried a bumper mounted antenna and a mag mount with the same results. I've tried a 20amp Radio Shack in line filter on the power line where it connects to the battery. I've also put Radio Shack noise filters (torids) on the power line.

Please help!!!!!!!

Darrell,

I developed and sell an upgrade chip for the TS-940 that allows
memory bank selection from the front panel, main tuning knob tune
rates of 10, 5, 2, or 1 kHz per revolution, tuneable memories, and
microphone up/down selection of memory channels. The cost is
$49 including shipping.

If interested, email me for more details.

Thanks, Jack Giehl, WB8BFS

Message-ID: <01bc2125$30aecd40$276c60cf@sstaten.erols.com>
Source record: 182290

I has a '733 and found its receiver to be poor from an intermod perspectine. I tried the notch filter I saw mentioned in a reply and also a band pass filter and neither was very satisfactory since that particular Kenwood receiver is so awful (even after factory servicing). I dumped the radio at a big loss and got a YAUSU FT-5100 that is almost intermod free with the notch filter.

Since this was the second radio that I had to dump because of intermod and both times, the QST review articles didn't point to the problem. a group of us wrote a letter to QST asking for something better. They DIDN'T publish the letter, but instead pulished an article praising their testing program (which like I said didn't keep me from getting burned twice on radios that simply weren't useable in an urban environment).

5148. ADDITIONAL FT50R- "D" Info

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-23 00:00:00 UTC
From: Thomas Gasta <tomgasta@worldnet.att.net>
Message-ID: <5eo5uh$8ku@mtinsc04.worldnet.att.net>
Source record: 182292

At the Hamfest today, 2 companies were selling FT50r-D version radios. They claim, and R and L in Cincinnatti confirms, that Yaesu is now offering an FT50r with the FTT-12 keypad already installed. The price from R and L was $369, but, they were quick to point out that it was a rip-off since they sold the FT50 plain for $299 and the FTT-12 for $56, and added the free battery. They also pointed out another quirk in this new "offer". The price of the radio reflects the normal radio cost plus the FTT-12 (seemingly no charge for the huge labor involved in installing this plug in keypad), yet, now that the standard FTT-11 keypad is not on the radio, wouldn't it seem that the cost should reflect this. Some places advertise the standard keypad for $30, yet there is not a thirty dollar "credit" for not having this board at all. So in essence, you would simply be buying an FT50r and the optional keypad, but would not have the original keypad as a "backup".

Once again, another marketing genius just didn't quite get it!

5151. Any Good Radios For Remote Repeater Receivers?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-24 00:00:00 UTC
From: k2mff@megahertz.njit.edu
Message-ID: <1997Feb24.215809.4484@njitgw.njit.edu>
Source record: 181996

Hello all. Has anyone ever had success using any amateur 2 meter gear as remote receivers for repeaters?

I'm thinking a good sensitive but selective receiver that is not prone to tremedous intermod (a fantasy). Something like an HTX-202, Heathkit HW-2036, Icom 22A/U or Yeasu Memorizer. Is anyone currently in a situation like this and got off cheap using amateur quality gear instead of going Motorola?

Thanks in advance for your thoughts,

Steve (KF2TN)

>
>Remember that guy, what's his name, Home Brew ?
>
You can brew it and use it, but you can't sell it in quantity without type acceptance. The rules have not changed. Many manufacturers go ahead and advertize new equipment with the footnote "pending FCC type acceptance." Haven't you seen this in QST and CQ? Commercial equipment is type accepted for use in all services and does not require additional FCC blessing for ham use. Part of the type acceptance requirement for H.F. amplifiers is they cannot operate above 15 meters. Another one limits the maximum plate dissipation in the final tube(s) of amateur amps. Another one that comes to mind is that wire you have to cut to make your new transceiver transmit out of ham bands....

FS: / Swap Icom AT-100 Antenna Tuner

Icom AT-100 $225.00 or what do you have to swap? The tuner is a 100 watt matching external automatic antenna tuner for Icom radios with 4 automatic switching coax antenna connections. Comes with the standard control cable that connects to the back of an Icom Radio, An optional OPC-118 Cable is required for the 725,726, 735, 761, 781 and others refer to the transceiver instruction manual I also have the OPC-118 for $25,00. The tuner operates on AC or DC.

The unit in very good condition operates perfect with manual, however I don't have the Original box.

>
> 73 Kevin N8ZJN
I'm sorry to here that. It appears that Yaesu made a typo on their WEB page for the FT-920. The FT-990 price was significantly more YEN than the FT-920. The price on the FT-920 WEB page is 198,000 Yen List. Notice the FT-900at is 179,000 Yen. About a $150 USA DOLLAR differance. Even if the price of 198,000 was firm price and you convert it to USA DOLLARS (198000 Yen x .00847) you get $1677.06 USA DOLLARS.
Go check it out for Yourself at http://www.yaesu.co.jp/news/index.htm
the price is at the top of the spec page.

> but there is not enough output to drive the Icom.
>

It is a trivial matter to construct a small one or two transistor preamp to use with your HM-10 on the Icom radio. You can find a suitable circuit in virtually any recent ARRL Handbook, or Icom will send you a schematic if you ask. The preamp can even be powered directly from the +8vdc available at the mic connector. Everything you need is available at that consumer electronics place around the corner

As an interim measure -- but one I don't recommend as a permanent solution -- you can just turn on compression and run the gain and compression level up. You won't really get any compression, but it will add enough gain in the audio chain to make the HM-10 usable

If you really want to sound good on SSB, get an Astatic 10DA with a UP9 stand (from AES) -- well, I'm sure you could get another hundred specific recommendations :-)

I am posting this for a friend, Bob Lutz, WB2BZR. Please reply directly to him. Thanks.

For Sale, Yaesu FT-736 VHF/UHF all mode with 6 meter, 2 meter, 440 MHz, and 1296 MHz modules installed.

$2,000 or best offer

With 2 meter, 440 MHz and 1296 MHz modules only: $1,800.00

With 2 meter, 440 MHz and 6 meter modules only: $1,600.00

With 2 meter and 440 MHz modules only: $1,400.00

Contact Bob, WB2BZR at (301) 253.2018 or by E-Mail at: robert.lutz@fms.sprint.com.

Thanks

Mike Cox, K3GEG

Ok, first an apology to all who sent msgs about these mods. Sorry for
the delay in getting these out here.

The Alinco DX-70 can be configured as follows:
Extended TX, open the RX up to 35Mhz and down to 30 Khz, Open the VHF
side from 45-60 Mhz RX/TX. All can be done quickly by , by removing or
changing a series of chip-resistors located in the detatchable front face
panel. This mod is a little tricky to perform, since it uses surface
mount devices, so I TAKE NO RESPONSIBILITY IF YOU BREAK YOUR RIG.
Alinco, further, in their mod sheet, warns that performing this mod
incorrectly will NOT BE COVERED via warranty. At first, I tried using a
Salami sized soldering iron--- take my word, get a good, very fine point
iron of about 15 or 20 watts max! Make sure it is static guarded too.

Ok...Here we go.

1. disconnect power
2. disconnect antenna
3. remove control head, disconnect control cable
4. remove 4 screws on back of control head,
5 remove (unsnap is more like it) the control head back panel.
6. THE MOD:

Once you have the back panel removed, and using the big VFO knob as
your guide (circuit board facing you, LCD display not facing you). The
VFO knob should be on the left side. On the right side, in the lower
right hand corner, you should see 2 distinct columns of chip resistors.

On the board, they are NOT labeled, but I will draw the diagram below to help you. You cant miss these because there are 5 chip resistors in the left-hand row, and the right-hand row has 7 chip resistors. Above both rows is a solder-pad.

a(::) h(::)
g-
i-
b - j-
c - k-
d - l-
e - m-
f - n-

Several chip resistors will be soldered in, depending on the model of your rig, and a solder pad is jumpered. Here are the mods per Alinco:

a. 45-60 Mhz TX/RX - solder a 0ohm or jumper across location i
b HF RX down to 30 Khz - remove the jumper m
c. beyond just Mars Mod - TX/RX everywhere remove both jumpers c and e
d. HF RX up to 35 MHZ - solder a bridge across pad a

After performing the above mods, reassemble the unit.

7. DONT FORGET to reset the microprocessor (with the radio off, hold the F button and simultaneously turn the power on.
All memories are wiped out, but the new bands are opened.

I've tried all mods with my Alinco rig and can confirm they work. I am able to pick up business band communication in the 46 Mhz range (FM), and cordless phones in 46/49 range. It TX's everywhere now too.

I do not take responsibility if you perform this mod incorrectly, and I am not responsible for your operation practice if you choose to illegally transmit out of band.

Thanks and again, sorry for such a delay in getting this out here.

Gentlemen

I have the same problem all of you have described. My vehical is a 1988 K2500 pick up and I'v never been able to run HF or 6 Meters because of the noise and I'm marginal on 2 meters. When the vehical was new I contacted the GM proving grounds which I was told was responsible for EMI problems, after a few phone calls they sent me a new set of spark plugs. Of course this did nothing and it didn't seem like I was going any where with this. I have tried very similer fixes as previously described including regrounding the hood, body, chassis and shelding the ignition system and it only seems to get worse. It has to be the @##$$%%^^&^&*^%$%$#@!@%&*(*() fule pump. If any one has any luck with a fix please let me know and I'll do the same.

tnx

Hi,

I am trying to get a US Tower TX455 through the Building and Safety Dept. of the City of Palmdale, CA. Palmdale requires structural calcs which meet the 1996 LA County Code. The problem is that US Tower only provides the 1994 Uniform Building Code which the City of Palmdale does not accept. Is there anyone out there that has the 1996 LA County Code structural calcs for the US Tower TX455?

I just built up a homebrew converter using 5 transistors and a
couple of diodes and a hand full of transistors. It includes the
capability to key the transmitter.

I am using Log-EQF. It is a professionaly done shareware program.
I recommend it for automated logging and cw keying.
You have to register to turn on some of the fancy DX logging features,
but the free version is excellent and well documented.

From: dbryndal@ashland.edu
Message-ID: <5etkbi$g73@sol.ashland.edu>
Source record: 182016

I am looking to trade a lick new in box MFJ-2270 packet controller for a
DTMF controlled autopatch. I will consider some monitary compensation for
new and more advanced features. IE: CW identifier, speeddial, voice
delay, duplex, timeout. I dont need a repeater controller just an autopatch.
The Packet modem is not sate of the art but is in new condition with
MFJ's EXTENSIVE manual for the beginner in packet. Opperates up to
9600baud on 144 and 300-2400 on HF. 32k ram for mailbox use. I have no use
for it here in South Carolina. Two DIN to bare cables included in NEW condition. Nice
beginner
or auxilariy unit.
I would appreciate a response. Dave Bryndal
dbryndal@ickis.gilmour.pvt.k12.oh
ALSO anyone know where I can get a FT-51 repaired? The RF baord is shot
and the BNC jack needs replaced. The left poor thing on the roof of my
car and forgot it and it flew off. IT STILL WORKS! kinda...

> >
YOU HAVE TO JUMP INTO THE WATER AT SOME TIME.YOU CAN WAIT FOREVER AND
YOU WILL NEVER GET WET. HOWEVER, IF YOU KNOW THE PRESENT MODEL WILL
BE A CLOSEOUT IN A COUPLE OF MONTHS IE. FT-990, THEN YOU SHOULD WAIT
AND EITHER GET THE PRICE INCENTIVE ON THE CLOSEOUT MODEL (FT-990)
OR THE LATEST TECHNOLOGY (FT-920).
I am a Engineer for a huge equipment manufactuer. I was told by
the CEO "DO NOT TELL CUSTOMERS ABOUT THE NEW MODEL ABOUT TO BE RELEASED
SINCE IT WILL HURT THE IMMEDIATE SALES OF THE CURRENT MODEL. SAY " I
HAVE NO KNOWLEDGE OF ANY NEW MODEL COMING OUT IN THE NEAR FUTURE. THIS
WILL GET THE CUSTOMER TO BUY THE PRODUCT. WHEN THEY SEE THE NEW PRODUCT
IN THE NEXT COUPLE OF MONTHS THEN I CLAIM I HAD NO KNOWLedge of it at

the time and that the imformation about new models is not given to many people outside the developement team."

Dana...

The more I read your material trying to "worm-out" of the hole you placed yourself into, the more it is becoming apparent that you are not very apt in engineering or RF work at all. It is useless at this point to continue a debate with you - since you are always right in everything you do, even when you are wrong. It's no wonder why hams have no access to much of the commercial radio sites. Think about it...

Mike, I do not have one for sale but I have recently built one and I am
very pleased with the results. It is exactly as advertised. The only
thing I need now is an amplifier to boost the 8 watts to something a
little closer to 300 watts to compete with the big boys, QRP is not such
a great idea on six meters. Go ahead and get one to "wet" your feet,
you can`t go wrong in my opinion. 73 KB7WTO Spokane, WA

Just a thought...in lots of rigs, the battery is wired directly to the collector of the RF PA transistor, so the cheesy little knife-edge-against-the-pin power switch incorporated into the back of the volume pot doesn't have to be able to carry TX current for the PA. The rest of the circuitry's power is switched. One of the manufacturers whose stuff we fix suggested this quick test to see if the PA was shorted: Take battery out of the radio, turn the radio off, and then drop the radio into the charger (or plug in the wall charger). If the "charging" indicator lamp comes on, there's a short -- and nearly the only thing besides the reverse polarity protection diode that can cause this is the PA. If using a wall charger with no integrated lamp, just put an ammeter in line with the charging lead. Anything over 1 or 2 ma (normal leakage for one of those transistors) means a short. And yes, most PAs are heatsinked to a metal radio frame -- but only the emitter leads (on some metal can transistors, that's the case).
Hope this helps.

Gavin...have you thought about adding an outboard preselector in line with the antenna lead at the radio? If you can stand a little attenuation, generally the more stages, the better the isolation. Just a thought.

This is what the urban legend is,... but I just don't believe it. Type acceptance has alot more to do with who will be using the radio rather than its performance.
Remember; ham operators have to take a test (and presumably know something) and are individually licensed. Business radios users are not licensed, the business is. Marine radio licenses are similar. One of the criteria for type acceptance of business radios is that they not be easily field progammable. Remember, the users are unlicensed and often untrained.

Just my $0.02.

You're assuming that these radios were not designed to cover large
frequency ranges. How do you know?
Perhaps they were, specifically to cover many product lines, then software
(or hardware) restricted to the range under which its sold.

5189. FT-50 DTMF question

I have a Ten Tec Model KR-50 "Ultramatic" keyer. This unit has built in paddles, speed set, side tone control, weighting, dot/dash memory controls. Has a red button on top that can be used for tune up - or - if you are extremely dexterous (or extremely slow) - send cw as a straight key.

No manual. Can't even remember where I got this gem or what I paid for it. On a scale of 1 to 10 it is a solid C+. A little cleaning, a little tweaking of the paddles to your liking and you should be happy with it.

The first $40 takes it. Price is shipped CONUS. Will consider trades of other HF stuff in similar price range.

>listening to DX. Switched radio, antenna, power leads and antenna lead
>with no help. Is the fuel pump considered the primary offender in these gm
>cars and has anyone talked to GM about it?
>
>Mark

Mark, I think it is considered a primary offender by lots of HF hams and CB'ers. I have talked with numerous hams who have stated that it is a particular offender when the antenna is mounted at the rear of the vehicle and a non-FM mode is used on HF (ie SSB). I have a friend who buys a new Suburban every year, he also uses a CB radio and always experiences RFI from the fuel pump. His wife's new Blazer does the same.

A Cadillac dealership parts man said that Cadillac solved the problem in the late 80's or early 90's by installing a new design pump (retrofit in some cases).

The people associated with GM (that I talked to) indicate that the interference is of little concern to them. They don't install communications radios in their vehicles. It doen't much affect AM radio (stations are usually very strong an there are lots of other interference sources and FM somewhat rejects the noise, although it can reduce the sensitivity of an FM radio). GM police cars are specially prepared by a fleet group. A person in this organization mentioned the RFI filter/harness for the Lumina (GM# 25027405) that no one that I talked to seemed to be aware of (at GM, Delco, or dealerships).

The symptom is a raspy whine in the radio almost independent of engine speed. An alternator can produce such a whine, but the pitch will vary with speed. On most fuel injected cars the pump will run for a second or so after the ignition is turned on, but before the engine is started. If you hear the whine then, it probably is the fuel pump.

You can make a "RF sniffer" from a piece of coax with a connector at one end and a short loop connected between the center conductor and the shield at the other end . Disconnect the antenna and connect this coax to your radio, move the loop around the car to locate the source, pump noise will be strong around the gas tank.

Source record: 182051

How opportune that you should ask. The CP50 is a neat little radio that is in fact keyboard programmable. It is made out of Motos very successful SP50 frame. It is not "easily" available in the US since Motorola did not want to get "TYPE ACCEPTANCE APPROVAL" for it in the US. Only Moto can tell us why, my educated guess, they were concerned that the radio would show up in commercial service, and as they are much cheaper than their "Commercial" radios, would be a competition for their commercial radio dealers.

There was a guy that could barely speak english selling them somewhere in this country, but he may well have received his summons by now. Not a bad radio if you can find one, and they do DPL which is a plus in my book.

Tom

Yes, amateurs can make their own radio without type acceptance, but they cannot manufacture, in quantity, radios for sale or lease. I have heard a lot of people correcting my seemingly wrong statement. I would simply direct them to both Part 2.800 of the FCC rules and to the back of their very own commercially manufactured radios, and on the back, you will find an FCC ID number (the type acceptance). Type acceptance for Part 97 operations only, and on the back of their Motowhiz, another FCC ID for Part 90 operations.

As a licensed amateur, and one who can read and understand the english language, I would direct you to Part 2.800 and specifically to Part 2.1005 of the FCC rules, and if that doesn't work, take a look at the back of your kensucom radio, see that little FCC ID, know what that is, thats right, it is the type acceptance ID for that amateur radio. If you would like to read parts 2.981, 983, 991, 993, 997, 999, 1001, and 1003, you will see just how much trouble Icsuwood had to go through to be able to sell you that radio frequency device, and if you want to build one for your own use, Part 97 allows that, just don't build them for resale without going through the same trouble. Like anyone with such a poor understanding of "ALL THE RULES" could ever build anything!

I accept your words without question. However I repeat my previous
allegation that radio amateurs are *not* required to use any type
accepted radios, and specfically I continue to insist that the
Motorola sets deigned for other services are perfectly legal for use
in the amateur service, contrary to what had been stated previously
in this thread.

On my Saturn, the noise is comming from the airbag computer/power supply. This noise will only be present when the ign is on and the car is running, HOWEVER, the noise will continue for about 5-10 seconds after the ign is shut OFF. The power supply is located in the center console (a switcher) and has harmonics into the 2m band. I have not yet found a solution to the problem. It is not normally affected by engine speed.

The 1997 National Amateur Golf Tournament is quickly nearing with only 6 weeks of registration left before play begins in mid-April all across America.

If you are a golfing enthusiast who enjoys playing competitively this may be the tournament opportunity you've been waiting for.

With the national pot expected to be well over $125,000 this year, this could very well be the chance you've been looking for to prove your golfing prowess.

For further details regarding the tournament and registration with The Silicon Hills Golfing Association please e-mail <Zider@msn.com> for all details pertinent to the tournament (registration, play, and prizes).

We look forward to hearing from you and finalizing the memberships for this year's National Amateur Golf Tournament!

The Silicon Hills Golfing Association

Not much logic to this.....

Car dealers still manage to sell cars even though the buyers know there will be a new model coming in less than a year. They reduce the price of the old model (slightly) and increase the price of the new model. I am waiting for delivery of my IC756 even though I am sure there will be a replacement model out. I just don't want to wait for it because when the replacement does come, there will be a new model in the pipeline.

I guess it's the difference between TALKING about a new radio and USING a new radio. You choose......

Hi everybody,

Just checking around my bookmarks this morning, I came across
a NEW LOW PRICE for the Kenwood TS-570D at Ham Radio Outlet:

$1499.95.

This is a $50 reduction from the $1549.95 they had been selling
it for!

I'll be happy to provide any info on the rig since I now own one.

Does anyone have the wall charger specs for Kenwood PB-25 battery packs?
Have an HT that uses these and don't know what to charge them with!

Thanks in advance...

However, the 455 kHz filter will have a better shape factor, resulting
in
better rejection of adjacent signals. Having the narrow filter closer
to the
antenna would only be an advantage when adjacent signals were strong
enough to
overload the 8 MHz IF, yet far enough away in frequency that the wider
455 kHz filter
would reject them. This is a very unlikely set of conditions.

Are you perhaps confusing the different levels of Part 15 certification
with 'type acceptance"? "Type acceptance" is something very specific,
and only applied to external power amplifiers below 144MHz in the
amateur service. However, receivers are subject to some level of
Part 15 standards, and, in some cases, receivers must be formally
certified, and in others, not.

But, you knew all this and just wanted to flame anyway, right?

I would be interested in knowing how the TMV7A and the Yaesu FT-8500 compare. I currently own a Yaesu FT-50R HT and love it. Now I am ready to expand to a Mobile and have my eyes on both of these models. Which is the better radio?

Thanks in advance!!!

-Austin

Icom, Yaesu, Kenwood, Standard

No. They all make good equipment. You may get some opinions based on a
singular individual experience, but if you have owned a zillion of them
like some of us, amd read a lot, you'll find that it's hard to go wrong.
It's just a matter of form and features.

Source record: 182112

I intend to add an additional IF 2.0 KHz SSB filter to my FT1000MP.
Will I get better performance by adding it to the 8.2 MHz 2nd IF or the
455 KHz 3rd IF section. Is it better to have the filter closer to the
front end, before the amplification of latter stages, or at the lower
frequency of the 3rd IF? I realize that adding both would be better,
but if I only add one, which will give the most "bang for the buck"?

>
> Ideas, anyone?

Call Universal or EEB (1-800-431-3939 or 800-368-3270) and ask them what
they suggest for a lightning arrestor. I know that Alpha Delta makes a nice
one called the LT that goes for $20.95. Basically, it uses a hermetically
sealed
gas filled cylinder which allows an arc to form when the vertical element has a
high voltage applied to it. Once the arc forms, the resistance between the
center conductor and ground will be negligible, and most of the energy will be
directed to ground (use a good ground rod & heavy copper cable to connect
the arrestor to ground)

I would still recommend disconnecting your shortwave receiver when it is not in
use.

Hope this helped,

Steve

5256. FS: TEN-TEC 1253 Receiver

Newsgroup: rec.radio.amateur.equipment

TEN-TEC 1253 9-Band SWL Receiver...This is a modernized "first
radio kit" classic, as TEN-TEC describes it in their kit ads.
I built the kit & it works great just like all the other TEC-TEC
kits I have built. Cost of the kit was $59...I got all the fun
out of building it so will sell for $50, plus shipping. Works off
12 VDC or 8 C-size batteries that fit in the case. Covers 1.8-22MHz.
Has built in speaker or use stereo headphones. See page 127 in
March 97 QST for discription & picture. It's a fun radio for kids
& beginners.

Thanks, Bill, N4DH

5257. Ft-530 Mods - need help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-24 00:00:00 UTC
From: Matt Hyne <mhyne@rp.csiro.au>
Message-ID: <Pine.SOL.3.93.970224150913.9065D-100000@venice.rp.CSIRO.AU>
Source record: 182120

I have an Yaesu FT-530 Dual band handheld and I have downloaded a list of mods to increase the transmitter and receiver coverage.

It says to remove J13 but leave J15 in place to keep extended transmit working however on my radio J15 is already open (it is the series two board with the vertical j15).

I therefore bridged J15 (& removed J13) and after the mod I get extended RX but no extended TX.

I need to transmit on 459Mhz to work with a volunteer rescue organisation.

Can someone tell me what else I need to do to get tx up here.

Matt

5262. What's an FBOM?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-24 00:00:00 UTC
From: n9vjg@aol.com
Message-ID: <331136ce.3597736@news.imaxx.net>
Source record: 182125

Are you reading this? Great! That means it wasn't written it for nothing. Not to worry, you won't be wasting your time.

Amateur Radio is a hobby and like all hobbies, it needs to be fun and rewarding. We at FBOM Magazine may not be able to straighten out your 40
meter beam after a hurricane or stop commercial satellites from squatting
on your VHF repeater input, but what we can do is present a lighter side
to all the QRM.

FBOM Magazine is the new generation of radio hobby publications, focusing
mostly on amateur radio operators (Hams). FBOM Magazine is for everyone,
from the guilt-ridden Extra class ham to a Technician or CBer that's tired
of being blamed for the erosion of family values in America. FBOM Magazine, the official publication of the Bad Signal Club--A free-thinking
state of mind where you are certified to transmit scratchy signals, crack a
joke without saying "hihi," tune up on some Little LEOS and have a good
time laughing at others as well as yourself.

As if that wasn't enough, FBOM also pokes it's nose into the world of the
scanner junkie and the strongest competition to wireless communications,
the Internet.

* http://www.interaccess.com/uncle-del/FBOM/.
* If you have America Online, visit the FBOM Magazine folder
* in the Ham Radio Forum message boards, under "Manufacturers,
* Dealers & Vendors."
*

Why YOU should subscribe to FBOM Magazine:

1. You will earn your official Bad Signal Club membership and will be
able to operate any bands with a scratchy signal and tell the
complainers
to stick it where the sun doesn't shine.
2. Blatantly hilarious and unusual commentaries on life as a radio
hobbyist.
3. No boring propagation charts. We replaced those with "Radio
Horoscopes".
4. No articles for home-brewing outrageous tri-banders and RF amps.
Just
step-by-step guides on how to build contraptions like a
"rubber-duckie
plane" for your HT and how to clean nasty things out of your
microphone.
5. Wacky contests where you can win antennas, free chunks of used
RG-58
and other prizes.
6. Free classifieds for paid subscribers.
7. We don't make you feel inferior if you work channel 19.
8. Hey.. we're writing it, so why aren't you reading it?
9. FBOM is 100% biodegradable and fat-free!
10. No test is required for this upgrade.

Why YOU should subscribe to FBOM Magazine NOW:

Rates are CHEAP! 2-year (4 issues) subscription rate of $9. 1-year
subscription rate (2 issues) for $5.

For only $9 you can have 4 issues of FBOM Magazine delivered to you.
Hey
that's a pretty good deal--especially for a publisher that is terribly
desperate to gain more subscribers!

How you can give us your hard-earned money:

*
* Mail a check or money order for a 1 or 2 year subscription to
* "Eric Bond" (That's me, the publisher and janitor) and send it
* to FBOM Magazine, P.O. Box 7711, Westchester, IL 60154-7711.
*

Hey Gang,

Talk to a Yaesu Rep. at Cincinnati Hamfest today and he
said the price would be about the same as the FT 990 since
it was an updated version on this rig plus 6 mtr. $2000.00 +/-
100 bucks or so.

Actually, it's a situation that most Icom mics (with their internal
preamp - necessary for the electret element that they use) have more
output that other microphones.

You can purchase an owner's manual for this radio from Yaesu
Electronics at 310-404-2700 ... good, rugged radio! I used to own one
- one of my favorite demo's with this radio in our store was to drop
it three feet onto a concrete floor, and then ask the guy I was
talking to "Now can I try that with YOUR radio?"! About the only
damage ever inflicted was to pop open the battery pack ... which snaps
right back together!

73, and good luck!

That's not very surprising. If you were a licensed amateur you would
(or should) know that there is no type acceptance protocol for
amateur transmitters, only for external rf amplifiers. Testing on
knowlege of these regulations is a part of the licensing procedure.

There are technical specifications for bandwidth and spurious
emissions, but these are the responsibility only of the control
operator. There is no requirement for any testing, registration or
labeling by a manufacturer or importer, aside from compliance with
Part 15, when applicable.

How much more ignorant than the fact that you ignored that I was talking about the FT-290R and NOT the FT-290RII which are two different versions altogether of the FT-290 series. If I HAD BEEN discussing the FT-290RII I'd have SAID FT-290RII. Also I am not so ignorant as to fail to see that you are deliberately trying to antagonize people by playing such infantile games.

> The radio has TWO antenna connectors, a BNC
> in the front for portable use, and an SO-239 in the rear of the

Maybe the LATER version FT-290RII has, but what I actually held in my hands at Jun's Radio was a different version of the FT-290 series, as I have already said.

> Blah-blah [snip]

Don't be such a presumptuous and manipulative ass. Some people are not as harmless as you might think and others like myself,(who have the wisdom to know that you are never so small as when you need to stand on someone else to feel tall), will just look down on you as being a pathetic little man who is so devoid of a life that your only way of checking to see if

you're really alive or if it's an illusion is to stimulate your environment by causing strife until someone kicks back. You are whats known as a closet-masochist with delusions of detachment from life.

You now have permission to go shoot yourself. We won't miss your sorry ass.

During the short period in which I have owned and had an opportunity
to test the radio, there have been a few openings on the higher
frequencies. I detect no birdies anywhere. Additionally,should you not
have seen another of my postings, the 756 greatly outperforms the 751
which sits beside it. I reaffirm that this radio is going to attract
much interest and many sales.

Commercially manufactured amateur radio equipment (i.e. produced for resale) does in fact carry type acceptance. Take a look at the back of most radios, for instance my FT40 (yaesu), and it has the FCC ID (type acceptance) K66FT-40R and even a canadian type 511 101 525A. If you don't think the FCC regulates the commercial amateur equipment line, suggest a trip to Japan. You would love to have some of the "Amateur" equipment readily available in that country that is not imported to the US because they cannot be "type accepted". Now days, there are so many reasons for failing type acceptance that many radios never make it here. They may not have anything to do with "spectral purity", but the type is required. Home made stuff, no type needed, "yet"!

By the way, there is a perfect example for you that all the "type acceptance" crazies have for months discussed.

MOTOROLA, thats right, the big M, has manufactured a radio(s) that are Amateur Only called the AP50 and CP50. These are the same as their popular SP50 commercial radio, except they are keyboard programmable in the Amateur Bands. They are not available in the US (in theory) because they are NOT FCC TYPE ACCEPTED for amateur radio. Why, who knows, keyboard programmability into the commercial segment as well. Maybe, or maybe Motorola didn't wan't their own radios coming back to compete with their commercial endeavors, the real reason for type acceptance nowadays.

5280. RF Switches FS

HRO is asking $319 for the FT-50, but they give you the battery! So it is a savings of $18 over the Universal price. Besides, HRO will actually exchange the radio for a new one if there is something wrong with it, instead of making you send it back for warranty repair.

5283. Re: Radio Shack VHF SWR/Pwr Meter

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-25 00:00:00 UTC
From: davemix@aztec.asu.edu
Message-ID: <5ev7u5$9me@news.asu.edu>
Source record: 181896

In a previous article, afn35036@afn.org (Steve King) says:

>Does anyone have the Rat Shack VHF SWR/power meter? It is item RSU
>10508018 in the 1997 catalog. It used to be sold in stores but now is
>available only through mail order. If you have one, or used to have
>one, what is/was your opinion of it? Is it relatively accurate? If
>you have the documentation for it, could you transcribe it into
>digital form or perhaps scan it into a GIF image and email it to me?
>I'd like to give the specs a read before spending $40+s/h to answer my
>questions. Thank you for your help.
>
>Steve
>--
>http://www.afn.org/~afn35036 (EL89tq)| "I have never really understood the
>http://www.afn.org/~gars | rationale behind sports...which
>http://www.afn.org/~quilters | all seem like exhausting new ways of
>PGP pub key: finger afn35036@afn.org | getting injured while sweating." -LGW
>

I tried one and the needle would not go to zero. I sent it back, for another
with other problems. I ended up trying four. One was DOA. I even had
the warehouse try to pick a good one for me. They were all terrible.

A friend has an old one that is good, but they have changed
manufacturers.

In article <33125A37.524F@pacbell.net>,
William A. Wetzel <n6rky@pacbell.net> wrote:
>Dana...
>
>The more I read your material trying to "worm-out" of the hole you placed
>yourself into, the more it is becoming apparent that you are not very apt
>in engineering or RF work at all. It is useless at this point to continue
>a debate with you - since you are always right in everything you do, even
>when you are wrong. It's no wonder why hams have no access to much of the
>commercial radio sites. Think about it...

This personal attack is completely without merit and distressingly
out of place. If this is how you respond to challenge in a
technical discussion, then there is indeed no point to further
discussion with you. I am not always right, and I always wish
to learn, which is why I previously wrote:

So, while some radios are indeed not good performers outside the
amateur band, others are. The potential for interference that
type acceptance attempts to address is interference caused by
improper selection of operating frequency and mode, not dirty
emissions or poor receiver performance. Technical standards
for emission purity exist regardless of type acceptance standards.

If I am in error, please feel free to show me exactly where.

I'm not sure what "hole" I am supposed to be in - I'm not trying
to worm my way out of anything. I *was* trying to have a pleasant
discussion of technical facts - and you may note that I indeed
agreed with you, that *some* of the US amateur radio gear is not
designed for broadband operation. However, I have most certainly
seen US amateur radios that *are* designed for broadband operation,
and I don't think this puts me in any kind of hole.

Now, Mr. Wetzel, if you can turn off the "I'm right and you're stupid
and arrogant" flame mode long enough, please *show me exactly where I
am in error*. I must have made some serious errors indeed to lead you
to declare me an inept engineer, and I would like the chance to
address these errors. If you do not respond to this note, it will
be interpreted as a tacit admission that you are not capable of
carrying on a technical discussion without resorting to personal
attacks.

As for radio amateurs in commercial sites, the site owners I know tend to frown on radio amateurs primarily because of two things:

* Amateurs tend to act like they're entitled to a special discount on site rental.

* Amateurs tend to come tinker at the radio site, often bringing friends, and disrupt the equipment of the paying customers.

Now, maybe I'm wrong, but these are just my observations.

Okay, folks, enough is enough. PLEASE, let's end all of this petty arguing, griping, insulting, and personal attacks on each other. As I recall, these newsgroups are for discussing EQUIPMENT, and not for discussing our opinions of each other and so forth.

I know that we all have the right, and ability, to just ignore the arguments, etc, and read the worthwhile posts, but it's annoying to have to wade through the muck to find the relevent posts.

PLEASE... if you have a problem with someone, and you feel some kind of need to insult them or argue with them, do it via private e-mail. Don't clog up the newsgroups. Let the rest of us enjoy them!

Thanks! (and if you feel you must flame me, do it privately!)

Ted is showing his ignorance AGAIN! I own an FT-290R (original), Ted...
It has two connectors, one SO-239 on the back, one BNC on the front, just
like the FT-290RII. The two rigs are NOT "altogether different".

Why do you insist on commenting on rigs you don't own and have no
experience with???

Re: Your threats, curses, etc... (deleted) Keep it up, if you like,

5306. New too Ham and Trucking ...best equipment?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-25 00:00:00 UTC
From: guru@vnet.net
Message-ID: <331367D5.48FE@vnet.net>
Source record: 181919

Hello,

I am a new truck driver wanting to get into Ham radio. I was wondering what kind of equipment was good for the rough rides of a truck?

I was hoping to get a radio that is broad banded (even 11 meters).

When I was younger (14) I had a 11 meter president Grant that would go below ch.1 and well above 40. I hated having the "digital read out" affixed to the top of the radio. I am now older (and wiser) and want to go legal.

I am also wanting to use my laptop on the road w/ satelite hookup.

Any ideas?

Thanks,

Grantly

PS please email response to: guru@vnet.net

Sorry your experience was so bad. My own has been much better. I get each month's issue between the 12th and the 15th of the month. I don't often see these lying around in stores in my part of the country, but I have had my share of successes in purchases.

FS: / Swap Icom AT-100 Antenna Tuner

Icom AT-100 $225.00 or what do you have to swap? The tuner is a 100 watt matching external automatic antenna tuner for Icom radios with 4 automatic switching coax antenna connections. Comes with the standard control cable that connects to the back of an Icom Radio, An optional OPC-118 Cable is required for the 725,726, 735, 761, 781 and others refer to the transceiver instruction manual I also have the OPC-118 for $25,00. The tuner operates on AC or DC.

The unit in very good condition operates perfect with manual, however I don't have the Original box.

There are other excellent means of direction finding that are real'
cheap!

My friend and I did a lot of ham fox-hunts a couple of years ago. We
found the
"fox" every time. About half the time we found the fox before the
doppler guys
too.

Two people and two handies work like a champ.

All you need is a radio with an Smeter and two antennas.
Hold the handie flat up to your chest vertically and do a couple of
rotations.
You'll see the signal peak and null. The null means that the signal is
eminating
from behind you. I'm not sure, but I think the spine acts as a
"reflector"!

As you get closer to the source, use a rubber duckie for the wrong
band. ie: if
you are chasing 146MHz use the correct duckie until the Smeter shows no
null then
plug in a UHF stubby. Repeat the process untill you are using NO
antenna. Once you
get FSD (full scale deflection) with no antenna you should be within
visual distance.

Start beetin' the bushes!

The key is that you need two people to make this work. Reflections play
hell on VHF and
UHF signals. So you and your friend should hop out of the car and stand
20 or 30 ft apart.
When you both get readings that agree - you've got a good direction (90%
of the time anyway!).

Good luck - it's a riot!

Cheers!

I'd send you a note via email, but right now my ISP is having problems with their email server. :-(Oh well.

Your message came at about the right time, I just noticed that Radio Shack has lowered the price $50. (Sale price $199.99) I assume that they are getting rid of this model and getting ready for the new model that comes next.

I haven't had a chance to go to the Ham Stores and price the different units. So I have no idea what's a high or low price range. I assume the the price of $199.99 for the HTX-202 is a good deal. Am I correct ?

Your point about HTs being a safety hazard in the car is very good. I recall hearing about the increased risk of accidents for those who use their cell phones in the car.

Sincerely,

Bob Diaz

I have two UHF repeaters for sale. One is built from a Motorola Micor and runs 25 watts out. It is crystaled for 449.850 Tx and 444.85 Rx. It has a microcomputer controller with 14 DTMF commands, voice ID and other voice messages. You can see some pictures of this repeater at URL: http://www.xpressweb.com/~jarjwr/ The power supply is heavy duty and all the system works very well.
The other repeater is an RCA unit comverted for 449.80 Tx and 444.80 Rx. It runs about 15 watts out and also has a microprocessor controller. It has a DTMF decoder and Wav-Com duplexers. The Radio is a class act as it is a regular blue RCA case with locking doors. I will sell either or both repeaters for $450 each. These units were converted by myself and my background is an electronic eng with many years of UHF and microwave design experience. If you don't beleve me just ck my spelling. Hi. These units must be for pickup only in Kanab, UT. 3miles North of the AZ boarder. Thanks for reading and eMail me if I can answer any questions.

Unfortunately, I must agree with this gentleman.
I am (or used to be) a avid reader of N/V, but I can't understand why
even though I paid for a 2 year subscription I recieve the majority of
my issues around the 25th of the month. i was very surprised when I went
to HSC & found them with piles of NV for FREE at the first of the month.
I feel my subscription money was wasted, I could go get it for free &

most importantly - ON TIME!
I hope someone from NV sees this as you can gurantee I will NOT be
renewing my subsription. I will just get it for free from the surplus
place. I'm not saying it's a bad mag, just that the subscribing benefits
are not there, making it pointless.

From the back of my Tempo S1 transceiver: Receiver certified to meet
FCC Part 15 as of date of manufacture.

Heck, even my shortwave receiver has a label similar to that. So does
my TV set.

These devices are all unintentional radiators that radiate RF as long
as the device is powered up, so they should be regulated.

Funny that no such label appears on my amateur transmitters (as opposed
to the trans*ceivers*).

Jeff KH2PZ

It's my understanding that commercially-built amateur transceivers must
satisfy type-acceptance *only* because the rcvr's oscillator is a Part 15
device.

VIZ made radiosondes back in the 1970's for USWB and also for the Army, at least. There are two general models, one for around 403 MHz and the other for 1680 MHz. I've seen both tube and transistor models, depending on age. They generally have a barometric sensor, a humistor, and a thermistor for sensors. The old (S-band) ones were tracked by the AN/GMD-1. The units that we used at White Sands required dipping the battery in water to activate them prior to release. Does this answer your questions?

From: rmwatson@eskimo.com
Message-ID: <E6505r.Bv7@eskimo.com>
Source record: 181948

I recently purchased a Kenwood MC-50 desk microphone, which has a 4-pin female DIN on the radio end. I need an accurate description of the DIN end wiring assignment, that I may use it for a Kenwood TS-440SAT, (which has a 8 pin jack).

In essence, I am going to convert from a 4 pin DIN to an 8 pin DIN. I only need the assignments for the 4 pin on the microphone stand, as I have the schematics for the TS-440SAT already.

Your help is appreciated. Thanks much.

Source record: 181950

As the earlier responses note, this was a 2 meter transceiver developed by NRI for their educational courses.

The kit is a cheap knock off clone based on re-engineering of the Heathkit HW-2036 and cutting corners wherever possible. For instance, it is only single converstion to 10.7 MHz instead of dual conversion on receive. The IF crystal filter out of band rejection is significantly compromised by the board layout and is "wide as a barn door". There were some front end problems, too. The other writer who noted the problem with the interboard connectors was 100% right - they are VERY unreliable. The wiring around the final PA stage (a module) is very questionable as far as stability is concerned, and I'd not even chance putting the one that was given to me on the air. I've seen it on a spectrum analyzer and know better.

I hope you did not pay much for it. It is not worth much more than the parts. If you are going to build it, you will need to add extra braid grounding straps from the board to the chassis to get the spurs down far enough to make the receiver even basically usable. I did get the synthesizer whine down on mine, but it took a complete reengineering of the synthesizer loop. I would suggest that if you have not yet built it, that you forget the main chassis. Find a metal box big enough to hold all of the boards, and run soldered wires between the boards, including small diameter coax for all of the signal leads. Isolate the digital counter board with shielding from all of the rest of the circuitry, and bypass everywhere you can. You can make this a "usable" radio, but I hope you are not in an urban environment, because it will "fall apart" on the air. Good luck, and 73.

5343. ## Search for handheld radio or scanner with external frequency control and optional dual UHF receive

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-25 00:00:00 UTC
From: techno@actcom.co.il.NOSPAM
Message-ID: <E6564s.FyJ@nonexistent.com>
Source record: 181963
Cross-posted to: rec.radio.amateur.equipment,alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hello all,

I need to build a system consisting of TWO UHF (400-500MHz) scanning receivers, whereas one receiver quickly searches the band, and once it has locked to a signal (squelch triggered), will program the other receiver to another frequency (at a fixed frequency distance. This is called "reaction tuning"). This is needed for example for finding repeater frequencies. Since it might not be possible to implement this with ready made devices, another option would be to have the 1st receiver output it's currently received frequency to an external (serial?) port, where it might used to program the 2nd receiver, with some possible frequency calculation done with an external computer along the way. Since there are dual band handhelds capable of receiving two frequencies at the same time (such as the FT51, TH79, etc.) and external frequency control, it might be possible to implement such a system with a dual band transceiver too, if it could support frequency input/output and fast search too.

The most essential requirements from the first (controlling) receiver for this application are:

1. FAST SEARCH rate (around 100 steps/second or better). fast SCAN and large amount of memory channels are not a must. additional search steps would be an added bonus, but 12.5KHz search step is a must.
2. Support for search limits (upper/lower bounds, with automatic roll-over at search limit).
3. Reception of the 400-500MHz frequency range. Extended range would be a bonus.
4. Can OUTPUT received frequency (once squelch is triggered) to external port (preferably RS-232, but can also be CIV or any other standard).

The 2nd (controlled) scanner must support the folling features:

1. Can accept (INPUT) a frequency change command (preferably RS-232, but can also be CIV or any other standard).
2. Reception of the 400-500MHz frequency range.

The two scanners need not be the same, but it certainly is possible that the same model will meet both requiremnts. It's also possible that a "smart" dual receive transceiver (with external frequency in/out) can be adapted to this use.

It should be noted that the above requirements exist in various scanners (fast search and external frequency in/out), but I have not found them to exist in a SINGLE model (i.e externally programmable scanners such as the AR8000 don't search fast enough, while fast scanners such as the BC-220XLT don't have the frequency I/O).

Of course, with all other issues being the same, a lower cost solution would be prefered.

Any pointers to such scanners/handhelds would be truely appreceated. Thank's!

regards,
techno

The same rules that allow us to build our own also allow us to
modify or otherwise adopt any radio for use on the amateur
bands. There have been hundreds/thousands of Motorola
radios pressed into service on amateur radio by hams.

And thus the greatest way to hurt me if you think I am a fool is not to
censor me but to let me be heard, as you have done.
You have decency even if you think me a fool.

You are welcome as is anyone to contact my students (dormouse1@juno.com
or my daughter at aurora24@rocketmail.com) and ask them for your self.
Foul language? I used ass, report me. You no doubt have seen the vile
profanity used against me? When compared to the public at large I am
indeed an ass but when compared to hams I am far superior than MOST.

Can you tell me just what
> exactly it is that makes you a better person than any of these people
> you speak so poorly of?

I do not call my wife THE WIFE or my daughter a harmonic.
I have a life, I care about other people, I have guts to name just a
few.

I also pride myself on being a volunteer
> interpreter for the deaf, a volunteer for the American Legion, an
> advocate for the rights of Veterans and the disabled, among other
> similar interests. I literally volunteer more of my time than I work
> for a wage, I may be poor but if pride were gold I'm a very rich man..
> Can you say that, Burt?

All of the above makes you a better man than I. Notice I deleted what
you "do" for ham radio.

I too am an American
> and am entitled to my opinions and my opinion is that you are a bigot
> and have no business in the teaching profession if you are incapable
> of treating other human beings as the equals that they are. In the
> mean time, I'll be praying for your students..

No need to pray for them, ask them if they need your prayers.
Hams are not equals, all others are or are superior than I.
Just how am I bigot?

No one here has the intellect to deal with my students OR THE GUTS.

I dont understand what the problem is,,, Yaesu will still work on your FT-1. I had mine updated to a Lot 10 not too long ago. The only other place I would send the FT-1 to for repairs is Burghardt Amateur Center at Watertown S.D. They have a complete repair facility in fact it may be the best in the U.S. and about 5 or 6 tech's working full time. Whats wrong with it?? Maybe you could fix it yourself, its a great radio with the best shift/width and excellent filters. The front end is crunch proof too with push pull rf stage and a double balanced diode ring fist mix. The agc is second to none. Unfortunatly it dosent have the all the bells and whistles which are required by hams today.

I stand by my postings about the FT-920 price. You guys can sve my
postings and repost them in April and "STICK IT TO ME " if I am wrong.
Remember the radio is always a couple of hundred dollars more the first
couple of months and then the price comes down. Remember the Kenwood
TS-870 cost $2600 when it came out. Now It goes for $2200. thats $400
less. Even if the FT-920 starts out high I bet it will slide down to at
least $1600 by next fall.

I have a working Tektronix 2213 60 Mhz 2 chan. Scope I would like to swap for any and all of the following.

1-Kenwood DG-1 digital display for Kenwood TS-820
2-MFJ 784B DSP
3-Power plug for Kenwood TS-820 (12 pin jones type)

If what you have is of lesser or greater value than the scope , I am willing to work out the difference in cash. Or I am willing to sell or trade the scope outright, make me an offer.

One hasn't been mentioned, the Radio Shack HTX series. They are the only real usable HT in a Metropolitan area with lots of intermod. They will not receive or transmit out of band, (why they are immune to intermod). They are large and heavy, easy to use, and seem to be reliable. The cost is low, and you can get a 3 year service agreement that covers drops, slammed in doors as well as factory defects.

The best thing is almost every little town in the country has a Radio Shack store so you can pick one up almost anywhere.

With that said, I always recommend a mobile radio for your first 2 meter or 440 rig if you are planning on using it in the car or house. In my opionion HT's are only usable for field events where the handheld is a requirement, and are a real safety hazard in a car.

>this organization mentioned the RFI filter/harness for the Lumina (GM#
>25027405) that no one that I talked to seemed to be aware of (at GM, Delco,
>or dealerships).

Humm... My car from Japan had this type of problem. Then the dealer put a
ham radio kit on the car. Noise gone! Will I ever buy an american car
again. NEVER! I have been converted.

It's the american attitude about building cars that I don't care for.
Take GM for example. This "blow off" attitude towrds the customer
sucks! The engineers at GM simply blow off a good customer who just wants
to use a radio. The folks in Japan create a working group. Isolate the
problem, then come up with the fix. Make a kit that can be used on the
car at a small price ($149.95) that fixes the problems for the
specialized customer. Will I buy a car from them again? You bet. Why,
they cared about my needs as a customer.

How do you fix your noise problem? Simple. Buy a car/truck from a
company that cares about the customer. That will make the extra effort
to fix your problem. Did your dealer come up with at least 3 options when
you brought the problem to there attention? Did a mechanic come off the
floor and offer any solutions?

It looks to me like the dealer sat behind the parts counter looking
stupid when you asked the hard questions. Sat on his/her ass and made no
effort to help you. Did not even offer to find a solution.

When I brought the problem up to my dealer, they told me right off hand,
"I have not a clue as to what you are talking about". "Give me 10
minutes". In about 5 minutes the floor supervisor came out. Wrote down a

complete description of the problem. Then faxed it to somewhere. They asked me to return on Monday to see what they can do. I thought to myself yha right. At 0900 Monday morning I received a phone call from the supervisor. He told me of 3 possible kits that where available, two of which did not come from the manuf. They where 3rd party kits.

My point is that this dealer went the extra mile for little old me. Never treated me as stupid and never talked down to me. They simply got the job done. I am sorry but I don't find that level of service from American car dealerships.

5374. New Radio Shack Discone released...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-25 00:00:00 UTC
From: kb2rmi@pop3.frontiernet.com
Message-ID: <5ev72b$2e5c@node2.frontiernet.net>
Source record: 181994
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

Stopped at the local Franchise store, saw the release notice on the new discone which will replace the current model, the new one has a vertical element like the Diamond, for enhanced lowband performance TX and RX, same price as the current model. Should be a winner.

Also saw the picture of the new HTX204 dual bander, looks like they might have something there, the release listed quite a few really great features, the Franchise stores should be able to do these at about 350 or so.(Suggested list 399)

> VR2ZIZ

You'll find that the FT-1000MP is the "best buy", especially for those who can't afford a '1000D. The '1000D is still a better radio in many respects, especially if you are a contest operator. If you want a rock-solid, heavy-duty rig with an excellent reciever, and straightforward controls (very important) buy one. Just ask the big-time contesters.

For the money, the '1000MP is the one to buy. If money is no issue, get a '1000D.

Yes, there still in business.
I would'nt recommend getting a subscription though unless
you don't mind getting yours weeks after they hit the stores for
free.(If you see a good ad, forget it, someone beat ya to it).

I agree. I personally don't care that the issues are late. The fact is, you will get them. The articles are great fun and sometimes very humorous. If you want realtime stuff, then read other mags. My guess is that the subscription number is relatively low to this mag. These guys can't waste all their money on postage. I can't wait for the day when you just receive CD's in the mail, instead of all this paper to hang on to.

Hey Nuts and Volts, if you're out there: Why not offer a realtime mode of delivery, at additional cost, for these guys. Something like FedEx P1, or UPS 1 day? How about it?

I love mine. The only problem is the same as all other HT's that I have seen. The audio is weak. I bought the headset from KW later, and really like that. The sensitivity is the same or better than my other mobile rigs, when plugged into the mobile antenna.

Anyway, if you are wanting one to modify for the cell freq's, forget it. The new one's won't do it. Older ones will, though, once the mods are applied. If you want one just for talking, you'll love it. Be sure to get the high powered (5watt) version. You'll never look back.

5386. Van Gorden 1:1 voltage balun problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-26 00:00:00 UTC
From: Peter Shintani <shintani@tv.sony.co.jp>
Message-ID: <01bc243e$6cb4ece0$6103022b@dell-for-peter>
Source record: 181748

Hi:
I'm a newbie. Take it easy on me.
I bought and used a Van Gorden 1:1 balun on a dipole with about 100 Wpep
for about 1/2year.
I had no problems. I am now making a new dipole with traps so I can operate
on 15 and 20 m.
I tuned the traps and elements with my MFJ-259. I fired up my rig with
about 100 W pep, and
measured about 1:2 at the band centers. I turned on my linear set to about
500 W pep to check if
my coaxial traps would not break down. Instead, smoke came pouring out of
the Van Gorden trap. It
seems that the cap was not sealed properly so there was room for the smoke
to pour out.
I noticed that the cap was not sealed properly so I tapped it with a piece
of wood and the cap
came off easily. (Not having the trap sealed properly was a manufacturing
defect on it's own, luckily
no water penetration was evident)
The trap consisted of a 9 turn trifilar winding of about 12 gauge solid
copper enameled wire, no
additional insulation was used. It was wound on a plastic form with an
approximate OD of 1 inch.
It was a "voltage" balun. In the middle of the length of the coil, there
was an obvious black spot, and on
the inside surface of the coil form, there was plenty of black soot.
Obviously the enamel insulation was damaged during manufacturing so that
when just 500 w pep
with a 1:2 SWR was applied, the dielectric broke down. My warning to other
hams is that is this may be a fatal design
flaw in the Van Gorden design ? I would think that it would be better to
have added atleast some additional
insulation to one or more of the enamel wires(I don't know the type of wire
that was used so I don't know what its
actual dielectric strenth is) just for mechanial safety. The way the
plastic pipe was cut and the positioning
of additional holes to ease the manufacturing of the balun are obvious. I
just wish more care was taken when
my balun was made. Now I have to wind my own "current" balun this weekend
on a nice big Amidon core.
PEter
PS But hey what can one expect for $14.95

For Sale: Repco "Dimension Plus" UHF Repeater System

- 440-470 MHz TX/RX Operation
- Continuous duty operation
(no fan required if operated at +25 Degs. C ambient)
- 10 to 40 Watt TX Output (adjustable)
- 0.30uV RX Sensitivity
- Built in Battery Switching and Charging Circuit for Aux. Power
(uses external Lead-acid battery)
- Switchable 115/230VAC Operation
(Built in power supply)
- Internal CTCSS or DCS Encode/Decode
- Compatible with most tone panels
- Comes with Service Manual, and complete
set of extra circuit boards including power supply transformer and
spare receiver and transmitter/PA.
- Currently crystalled up and tested on 444.900MHz (TX), 449.9MHz (RX)
- Works flawlessly, and has never been in service.

Also includes:

- "dB Products" DB-4072 Duplexer.
($1350.00 new list price)
6 cavity unit w/80dB notch (250W capability)

- "Midland LMR" 19" Enclosed Rack cabinet w/locking doors, 4&#65533; tall

- "Rotron" Rack type dual 200CFM fan type blower.

All items are installed in the rack. I am asking $1500.00 for the
complete system, but I am open to offers at the Charlotte Hamfest on
March the 8th in Charlotte, NC.

Look for me there in the flea market area! Any questions, E-mail me
at parmentier@mindspring.com

Hi Squeak!

Ok, the guy that had the 733 was an experienced RF engineer. He tried
all these filters, homebrewed of course! Anyway they didn't work so
he kept his 751 and handed the 733e back.

I spoke to a Telecom engineer here who said on a mast 2 miles away
(line of site) that there were three 100watt transmitters around the
153Mhz mark so I guess we're stuffed!

Thanks for the help,
Gavin

I'll bear the FT-5100 in mind. I have heard that the new FT-8000 is
worse than the 733e!

> Since this was the second radio that I had to dump because of intermod and
> both times, the QST review articles didn't point to the problem. a group of

> the letter, but instead pulished an article praising their testing program
> (which like I said didn't keep me from getting burned twice on radios that
> simply weren't useable in an urban environment).

We in the UK have always respected QST for its impartiality.
Certainly I regard them (ARRL) better from the point of view that
they buy the equipment for review before hand so that they cannot be
seen to be biased when reviewing them. In the UK the magazines borrow
the radios off dealers or the big 3. Then the big 3 get a chance to
comment on the magazines review.

One magazine exclusively does 'user reviews' which are about as much
use as a chocolate teapot! None of the reviews mention what can
happen to the receivers in urban environment. I sometimes think that
they are too scared of saying, 'The FT8000 or TM-733e did
occasionally cave in under strong out of band signals'. However they
obviously don't mind us wasting 600ukp ($990) on a Kenwood TM-733e!
Seems very fair too me!

Regards,
Gavin

5395. AVVid is Moving

Date: 1997-02-26 00:00:00 UTC
From: Clif <avvid@onramp.net>
Message-ID: <3314A0D7.54B4@onramp.net>
Source record: 181804

To all our loyal customers,

Congratulations,

Because of your support we are moving to a newer and larger facility
to better serve you. Our new address will be effective Mar 1, 1997.
The 1-800-214-5779 number will not change but the local number will.

New Address:

AVVid
222 N. Story Rd. Suite 128
Irving, Tx. 75061

Again thanks for your support,

Clif and the crew at AVVid
AVVid is an Authorized Kenwood and Icom Service Center
http://rampages.onramp.net/~avvid/

5400. Unanswered FT-50 Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-26 00:00:00 UTC
From: lem@datatel.com
Message-ID: <856997663.23822@dejanews.com>
Source record: 181809
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner

Greetings,

I normally don't send unsolicited e-mail, but based on all of my reading I and still have FT-50 questions.

Would anyone with knowledge please take a few minutes and see if you can answer any or all of my questions. (Some are elementary and some are very technical, but any help is appreciated.)

My radio has the following serial number sequence: 6L130292 (but I've been told this doesn't matter)

My Radio has "freeband" mod: (de-solder blob "1", remove resistor "A" above blob 1, pwr on with lamp/knob,press FW, pwr off, pwr on with lamp/ptt/knob, change BAND=A* to BAND=FREE, pwr off, pwr on)

My Questions"

1. Why cant I get my radio to go back into "BAND xxxxxx" anymore, it did it one time during freeband mod? "I am interested in going back to see what the A1, A2, and A3 settings do, and if I should have createdtemplates for each of these? I assume two of them are EURO(s) and one is US configuration of the radio, if so does anyone have the template files (.TPL) for the three of these they could send me (if my assumption is wrong - - what are they and are there more, and can you send me template files for all of them) ? "I am also interested in getting to the INTERNAL SYSTEM ALIGNMENT so I can adjust the signal strength meter. I knew I read this somewhere, but YAESU said there was no such capability, help me???

2.
What are the various differences in the versions of the ADMS-1C software? (for example version 1.05 won't let you enter out of band frequencies [200-300 and cellular] even though you have done the FREEBAND modification, but version 1.04 will allow entry of out of band frequencies). Would having an older version(s) of the ADMS-1C software do anything for me, and which versions should I get my hands on (and how can I find them) ?

3.
How can you get the all VFO and HOME memories programmed into the radio from the ADMS-1C? Am I doing something wrong, are these a part of a template file (.TPL) versus a radio file (.RDF) ?

4. Would someone be kind enough to send me the following .TPL files via the regular mail (address below): • a standard US template [pre modification / out of the box configuration] • either or both European templates(EURO.TPL) with a desc of what each does do • any other templates that do anything off-the-wall, neat, or special [send with descriptions]

5.
Can someone tell me what each of these lines in my WIN.INI file do for the ADMS-1C?

```
[FT-50 Programmer]
AllowAnyFrequency=0
Calibrate=2909
Com=1
DataDir=C:\YAESU\FT50
TemplateFile=C:\YAESU\FT50\FREEBAND.TPL
UseTemplate=1
```

What happens if I start changing values of "AllowAnyFrequency", will that open it up so I can do the out of band frequencies via the software, and if so what value do I use (I have tried 1 and null, neither work) ?

What does the "Calibrate" do, and what are my options for values here?

6.
Is there a users guide or some detailed instruction manual that anyone has written for the ADMS-1C?

7.
Is there a power on button sequence that will reset the microprocessor without clearing memories?
Is there a power-on-button-sequence that will reset the microprocessor AND clear the memories?
What are all the different power-on-button-sequences and what do each of them do?

8.
Is there a mod for receive in the 25-75 MHz range ?
Will the radio receive VHF low band if I add 45.1x 2 to the desired frequency ? (ie. 52.250+90.2=142.450)

9.
Is there a mod for TX (or RX) in the 220+ MHz band ?
Is there a mod for TX in the 800/900 MHz bands ?

10.
Has YAESU printed new (revised) manuals for the FT-50 yet, I heard they were going to ?
Is there an advanced users manual yet (similar to what ALINCO did for the DR-599/600) ?

11.
What happens when you turn off the CPU clock shift function ?

What would this be used for, scanning via some sort of computer like
computer aided scanning ?

Thanks to those who responded to my "New Yaesu" post of 2/09/97 .
Sorry for the slow response , still stumbling thru this browser .

Talked to a Yaesu tech Monday and the new rig is going to be intro-ed
@ Dayton . Didn't have much comment on features . It'll be interesting
to see how much Yaesu can pack into one box AND still have it selective
and sensitive . We'll see . tnx agn 73 de AA1NL / Bill

5402. *** Priced below Rock Bottom-Kenwood TS-850sat SALE***

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-26 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5f2920$1cb@geraldo.cc.utexas.edu>
Source record: 181811

Hello all,
It seems Steve N6SMR has made the first sale in
the ongoing "TS-850sat Net Sale War".
Hats off to Steve! Now its left to the remaining contestants to
"battle it out".

Well, My tremendously minty TS-850sat is still waiting for a new home
and good parents. For you folks that missed Steve's sale...fear not-
this one is a equally supurb deal. Along with my "Showroom quality" 850sat
comes an Astron 20A supply...and for even lower price of $1085.00
OR- just the 850sat for $1050
I'll split shipping...(about $25 or less)

I'd rather sell it to a ham than let a dealer jack up the price
and re-sell it. (trade-in)

I'll give it a few days on the net and then I'm going to make my "move"
with the dealer.

Thanks guys-

Bob Nagy
AB5N

THANKS !!!

Thanks to all who responded to the posting for info on the Icom Interface to my new 756. The only problem now-- is obtaining software that will let me set the address of the 756 -- which is 50. The shareware version of the 706 software won't allow a non listed entry. I may have to wait a bit.

Thanks to all once again -- The response was gratifying.

73 WA8DXK ---- Russ

I own an Icom 756 which uses the CI-V interface . I have heard that the $125.00 CT-17 is nothing more than a ttl to rs232 level converter. Does anyone know if that's true and if it is, what are the line that are necessary? Also, what software is recommended?

Thanks in advance es 73,

WA8DXK --- Russ

Hi - and thanks for reading. I have an old ham friend who has decided the time has come to start unloading his gear - and this posting is on his behalf. He'd like to know a fair asking price on his Atlas 350XL transceiver and matching 350 PS power supply/speaker. He is the original owner and the equipment appears to be in beautiful cosmetic and working order. Original manuals included. Any Atlas afficianados out there who can help? 73, Pat (W7YCN)

I HAVE TO SAY IT GUYS,"I TOLD YOU SO!!!"
I have got more attacks from ham radio dealers for all my TRUE postings.
These "clowns" hate it when I post true announcements of New radios that
are comming out in the next couple of months because it hurts their
current sales. They continue to attack my credibility.It seems I am
correct once again.!!HA HA

I use Netscape and it's newsreader. Is there anyway that I can filter
out certain subjects/individuals from having them show up in my reader.
If not can you reccomend a news reader that has this facility.

I am not denying individual's right to blow hot air. As far as I am
concerned, their argument is lost at the outset by posting it to an
inappropriate news group anyway. This last posting reminds me of "Oh you
are so good at milking cows. I wish I could do it as well as you do."
The only problem is someone doesn't know a cow from an ass.

Thank you for your help with ther news reader.

Source record: 181831

Heathkit stopped selling electronic kits. I presume someone bought
company name and took over to sell only in educational/training items.

It was not like original Heathkit. No other companies can replace
Heathkit period.... The only way we can speak out loudly to their
CEO and demand to restore Heathkit back into electronic kits business.
This is not impossible!!! In the bottom line is Zenith ruined Heathkit
very badly with their arrogant CEO and teams. They controlled Heathkit
and very greedy in business for profitable. This is only my opinion
based on history.

I had been with Heathkit customer for years since late of 1960's and
always loyal with this company. Well it up to you to speak out!!!
Like pull original Heathkit out from the grave!!!

If not possible... Heathkit will never die!!! many equipments are
still around assembled and very rare to see in kit forms. I have
two packages unopened and I put it away for future who know I may
have children then I can teach them and I will be happy to see
them to touch the parts of the past, Heathkit!!!

Thank you,
Steven

In order to get the radio back into the "master set" (my term) mode, You will need to reset the "a" vfo to 144.000 and the "b" vfo to 440.000, no pl, no offset on either. hold down the top knob, ptt and lamp, and power up. you should see band+free. If you turn the knob, you should see the settings hssi, s1, s9, and so on. these will allow you to set the squelch sens, s meter and so on. if theat is what yaesu told you, they are lying. btw, If you power up with the vfo, the settings are for vhf. try switching to uhf and changing the specs. I set low pwr 1 to 10 mW to drive transverters.

> 8.

> Is there a mod for receive in the 25-75 MHz range ?
> Will the radio receive VHF low band if I add 45.1x 2 to the desired

>

I dont think so, but i'll try it with the service mon.

> 9.
> Is there a mod for TX (or RX) in the 220+ MHz band ?
> Is there a mod for TX in the 800/900 MHz bands ?
>
>

The radio will tx + rx in 220. tx pwr is 22 mW, rx sens is 3 mV for 12 dB sinad. pretty poor, but great for testing used 220 ht's at flea markets. No 800 tx, But the second harmonic of 440 freqs shows up quite nicely on a service monitor (hi).

> 11.
> What happens when you turn off the CPU clock shift function ?

Perhaps someone can answer my question. I need a "band data" din plug
for
an FT-1000D. I bought a standard 8 pin din plug at Radio Shack. It does
not fit the jack. The spacing seems a bit wider on the RS plug. Does
anyone know if this plug is an oddball size and therefore, available
only
from Yaesu??? Where can I get one??? Ideas??? Thanks.

5426. Need help with TS-430 CW VOX Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-26 00:00:00 UTC
From: "Michael A. Fallavollita, Ph.D." <mikef@microtech.com>
Message-ID: <331536A9.218D@microtech.com>
Source record: 181835

Hi All,
I just got my first HF rig, a TS-430 which is in great shape except it must have had one mode done that I don't really like and I'd like to know how it was done so I can undo it.

Basically, whenever you short the key it transmits whether or not the VOX is on or off. It appears to generate the normal sidetone. The only other telltale sign is that if you have the radio tuned to 7118.2 on USB or LSB and then switch to CW mode the frequency display switches to 7119.0. Also, there is no change in the frequency display when you are in CW mode and you switch the standby from receive to send.

I'd like to put the radio back to normal. Right now I don't know how to properly operate in CW mode because I don't know where I'm actually receiving.

Any ideas/suggestions would be greatly appreciated. I'm not very technical on radio circuits but I'm OK with a soldering iron and instructions.

Regarding Burke Baumann's message, it was very good. Perhaps I should had done the same thing when I was in this debate! In any event, anyone who's in the commercial radio service knows better than to modify amateur radio equipment for other radio services. It is poor engineering practice for a person to do so. I Thankyou Burke for your time in putting that together.

Ethan,

They were once called the poor mans Collins, a pretty good rig if it was built correctly.

Look at the front, if it says HEATH it is a factory assembled, and probably (but not always) better built, if it says HEATHKI T then it is a kit, and the quality depends on the builder.

They are basically and indestructable rig, but getting a little long in the tooth, and some problems may begin appearing with leaky capacitors, and resistors floating out of tolerence.

With that said, I have several of these, most loaned out to first time hams, and all are pleased with them. They claim 200 watts, but 100 is more like it, the 400 hz CW filter was optional, a nice addition if you like CW. I use one in my beach house, which means it sits for weeks at a time without being used, and always works fine when I turn it on. There are 2 O-rings for the loading capacitor which break often, but are easily found at home repair or auto parts shops.

If it is currently working and demonstrated so, with the HP-23 power supply, It probably would make a good rig, the cost should be in the 100 - 175 range with power supply and mike.

Have fun, they are a great radio to learn on, also get the manual, if not with the rig, you can get reprints from several sources.

5441. Re: FT-1000D and FT-1000MP Which one is the best buying?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-26 00:00:00 UTC
From: FCFB17A@prodigy.com
Message-ID: <5f0498$1a0c@usenetz1.news.prodigy.com>
Source record: 181850

I just bought a FT1000MP after doing a lot of talking and research. You can't go wrong with it. Cost was not a concern when I went looking. I could have got a very nice used FT1000D for $500 less, or would have bought a new one if I thought that is what I wanted. There is not much difference in price between the two if you load the FT1000MP up with filters and TXCO. I posted a note on the local dx cluster (KS9W) here in Chicago area and got a flood of replies from hams who loved their FT1000MP. One ham in particular had compared it side to side with the FT1000D and like the MP better. He said he used it mostly for weak signal dx on 80 and 160. A world renowned dxr - ON4UN has his review opinion of the FT1000MP here on the usenet under a note titled "Two weeks with the FT1000MP" - you should be able to find it with one of the search engines. His bottom line was he prefferd the MP and has replaced the FT1000D's at his station and the OT5T contest station. So far I am very impressed with it, but it has SOOOOOOOO many options in the setup menus that it will take a long time to figure it out. The receiver is outstanding. Both rigs are superb and you have to decide what you need most. If you need 200 watts and a sub receiver that can do more than one band at a time the FT1000D is probably what you want. If that is not a big concern to you I would suggest looking very close at the FT1000MP. Good luck at what ever you decide. --- Steve N9ROU

I checked--you are correct. However, since most power consumed is on transmit, the issue of bias current for the finals is significant, therefore the rigs still have appeal to QRPers due to power consumption issues.

Enough reason to consider one, at least for me, but NOT for $2000, as it appears the FT-920 will really cost.

Hi folks!

Does anyone knows about Signal/One company QTH?.

I recognized this company was dead.
But I hear that Signal/One's advertisement on QST!.
So I want to contact with this company.
Please give me any information about Signal/One company.
Such as QTH,E-mail,Home-page.....

My favorite rig is CX-11 on my shack and run it everyday.
But I do not have CX-11's manual.
Waiting good news from world!.

5446. YK-455C-1 filter mech or crystal?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-26 00:00:00 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <29698.856925494@safety.ics.uci.edu>
Source record: 181855

And I never looked inside a mechanical filter, what are they made from?

I saw an ad over on rec.radio.swap for the Kenwood YK-455C-1 "mechanical" filter, told the fellow it was probably a crystal filter since that was the only sort of filter I had ever seen from Kenwood. He replied that the documents stated it was a mechanical filter. So, I am really curious about the difference, and what filters Kenwood made that had such an architecture.

It seems to me that the scuttlebut lately has been the the Collins "mechanical filter" mystique is a bit hyped up, that a good crystal filter has as good specs anyway. Is this true? I have never seen the specs for a mechanical filter.

Just wondering.

5447. Kwd 440 processor noise problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-26 00:00:00 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <29765.856925878@safety.ics.uci.edu>
Source record: 181856

I love my 440, but had to send it to Kenwood once since I had
shorted something while trying to install the tone encoder.
Kenwood fixed the problem, but after that I seemed to notice
a processor type noise on quiet bands and when I disconnect
the antenna. Other 440's don't make this noise that I can tell.
I am not positive it began after the service, but that is when
I began to notice it. It is not bad, I cannot detect it most
of the time, and it barely interferes with very weak signals.
Still it bothers me, and is a problem for very weak signals
on a quiet band.

The noise seems to come from the PLL since it stops temporarily
while I turn the dial. It starts right back up when I stop.

Curious, anyone else see this problem? Likely a loose ground
somewhere? Should I do the standard tracing of all ground
connections to make them shiny and stuff?

Greetings to all,

Rememberthe US $ / Yen ratio has been going up approx 90 to 120

equals about 30 % so the $ 50.- is a minor adjustment!

This applies to all imported products from jp.

I'm the fellow who wrote the progam that is on the ARRL site. I
appreciate you're bringing this problem to my attention. Frankly,
I was mistakenly under the impression that anything written in
Visual C++ 4 for Win95 would also run on NT. Somehow this appears
not to be the case. I had the same problem that you did running
this under NT.

So I thought perhaps if I recompiled it under NT it would run. No
dice. However, what I did discover was that the only problem that
I can find appears to be directly related to the thread which receives
data from the radio (when I enter a command on the screen it goes
to the radio just fine). Fortunately, the entire block of code
that handles data coming from the radio is only a couple of dozen
lines long. So it should be possible to fix this fairly easily.

In the meantime, most of the codes that you need are in the
706 manual itself. My recollection is that the only ones that were
missing were the ones that commanded the radio to report it's status.
I had a paper here somewhere on the subject; I'll attempt to find it.

Anyway, thanks again for pointing out the problem.

73, John WA0PTV

Hi Tom

Tom I think part of the confusion here stems from the assumption that the only approval granted by the FCC is "Type Acceptance" and this is what is associated with the FCC ID number found on electronic devices. It also is assumed that this approval is related to the appropriate part of the FCC regulations for a particular radio service, in particular Part 97 covering the amateur radio service. These are both basically bad assumptions with the exception that some amplifiers for amateur service require type acceptance.

First in addition to "type acceptance" the FCC also issues several other types of "APPROVAL" including "Certification", "Type Approval" and "Notification". If you look at the ads for the ICOM IC-756 before it was approved it said waiting "FCC Approval" and nothing about "Type Acceptance". Also as I will show the "FCC parts" that the radio is tested to for approval may not in all cases be the same "FCC Parts" for the service the radio is going to be used in. This is not to say that an amateur transceiver does not have to meet Part 97 but that the "FCC approval" was not based on the part 97 requirements but instead on "part 15 " of the FCC regulations.

I own an ICOM IC-756 and waited several months for the FCC to "approve" this radio. During this time I repeatedly checked the FCC database to see if it to had been approved. (301-725-1072 for those who are interested. It might be a clue about the ft-920)

I apologize for the long attachment that follows. This is a capture file
from a session on this database.
It shows that the IC-756 approval was for a "notification" and was approved
under "PART(S) 15". The device was listed as a communications receiver
with a note that it was an amateur transceiver. Included in this file is a
definition of the fields in the report. Also included is a document
"MARKETING REGULATIONS FOR RADIO FREQUENCY DEVICES" that also contains info
about approvals and a document "Extended Coverage High Frequency
Transceivers". This last document covers use of amateur equipment in
services requiring equipment that is "TYPE ACCEPTED". It also states
"Transmitters designed and intended for use only in the ARS must comply
with the applicable technical standards contained in Part 97 of the
Commission's Rules but are not required to be
type accepted.

Data Element Definitions

The following data elements shown in applications records are derived
from
the data listed by applicants on the current edition of FCC Form 731 and
rule
sections governing the specific class of equipment.

Application Date - Date of Applicant Certification by
authorized
signature on Form 731.

Emissions Designators - Pertains only to type accepted equipment, and
certain notified transmitting equipment used pursuant to a station
license.

Equipment Class - Derived from the particular rule sections specified
in the rules governing the particular class of equipment.

Expiration Date - Applicable to certain types of equipment as specified
in
the Rules. Equipment cannot be manufactured or marketed after this
date.

Frequency / Frequency Range - The frequency or frequency range the
equipment
is authorized to operate. Pertains to all equipment with the exception
of Class B Computing Device Peripherals.

Frequency Tolerance - Pertains only to type accepted equipment, and certain
notified transmitting equipment used pursuant to a station license.

Grant Date - Date of Grant as specified on the most recent
authorization
issued by the FCC for the specified FCC Identifier.

Grantee Name/ Address - Name and address of the applicant as it appears
on Form 731 and as listed by applicant/grantee code in the Commission's
records.

Note Codes - Two character codes used for referencing specific notes
which
apply to a grant as issued by the FCC. Notes can be referenced in
the
Note Code Definition file on the main menu (Selection #2).

Original Grant Date - This field was created in June, 1985.
The
original grant date represents the date of the last grant issued prior
to
June, 1985, or the date of the original grant of authorization if
the
application was approved after June, 1985.

Power Output - Pertains only to type accepted equipment, and certain
notified
transmitting equipment used pursuant to a station license.

Receipt Date - Date of receipt of the application at the Mellon Bank in
Pittsburgh, Pennsylvania.

Related ID - FCC Identifier assigned to a companion application filed
simultaneously.

Rule Part - FCC Rule Part(s) under which the equipment is authorized to
operate.

MARKETING REGULATIONS FOR RADIO FREQUENCY DEVICES

A radio frequency device is defined in Section 2.801 of the Rules as any device which in its operation is capable of emitting radio frequency energy by radiation, conduction, or other means.

Section 2.803 - Equipment requiring Commission approval.

Equipment subject to Certification, Type Acceptance, Type Approval and Notification is required to be authorized by the Commission prior to marketing in the United States. Marketing means, "sell or lease, offer for dale or lease (including advertising for sale or lease) or import, ship. or distribute for the purpose of selling or leasing".

Advertising or display of a device requiring a grant, but has not been granted certification, type acceptance, type approval or notification will not be deemed to be an offer for sale, provided the advertisement contains, and the display is accompanied by a conspicuous notice as follows:

"This device has not been approved by the FCC. This device is not, and may not be offered for sale or lease, or sold or leased until the approval of the FCC has been obtained".

Any non-approved device displayed under the terms of the above provisions may not be activated or operated.

Section 2.805 - Equipment that does not require Commission approval.

Equipment which does not have to have a grant issued by the Commission, e.g.,
a device subject to verification, but must comply with specific technical standards prior to use, must not be offered for sale or lease (including advertisement for sale or lease), imported, shipped or distributed for the purpose of selling or leasing or offered for sale or lease, prior to

compliance testing to determine compliance with the administrative and technical provisions applicable to the specific class of equipment.

Extended Coverage High Frequency Transceivers

The purpose of this Public Notice is to clarify the Commission's Rules regarding equipment that is intended to operate in various radio services in the high frequency radio spectrum, including "10-Meter" Amateur Radio Service (ARS) equipment.

The Commission has noted that a number of transceivers imported as ARS equipment are also capable of transmitting and are being operated in nearby frequency bands allocated to other radio services such as the Private Land Mobile Radio Services, Maritime Services, Auxiliary Broadcast Services, International Broadcasting Services, the Citizens Band Radio Service, and the U.S. Government. Operation of this equipment causes interference to the authorized users of these frequencies. Some of these <<<<read here transceivers are capable of using output powers or emission types which are not permitted for the radio services listed above and some are capable of transmitting in the radio astronomy band where no two-way radio communication is permitted. Some

manufacturers are promoting the sale of conversion kits, or have designed their transceivers such that they can easily be modified by the users, to extend the operating frequency range into the frequency bands listed above. In addition, so called "export" radios which are deliberately designed to facilitate this capability are also being imported and marketed.

Manufacturers, importers, vendors and users of these transceivers are reminded that transmitters intended for operation on frequencies allocated to any of the FCC authorized radio services listed above, except the ARS, must be type <<<<read here
accepted by the Commission for the particular radio service(s) in which they are intended to operate prior to their importation, marketing or use. The Commission considers that the transceivers discussed above are intended to be operated on frequencies where the use of type accepted equipment is required, because of the simplicity of modifying them to extend their operating frequency range. Transmitters designed and intended for use only in the <<<<read here
ARS must comply with the applicable technical standards contained in Part 97 of the Commission's Rules but are not required to be type accepted.

It is a violation of the Commission's regulations to: (1) import or market a transmitter that is designed or intended to operate on frequencies outside of the ARS bands, if it has not been issued a grant of equipment authorization for the radio service(s) in which the transmitter is capable of operating; (2) <<<<read here
import, market or operate a transmitter that requires a grant of equipment authorization but for which no grant has been issued; or, (3) transmit on a frequency allocated to a licensed radio service without the appropriate Commission-issued station license. Violation of the Commission's regulations will subject <<<<read here
manufacturers, importers, vendors and users of this equipment to appropriate criminal penalties as provided for by federal law(s), including fines and/or imprisonment. In addition, the equipment described above can be seized by, and forfeited to, the government.

For further information concerning this Public Notice, contact Gary Hendrickson at the FCC Laboratory, 7435-A Oakland Mills Road, Columbia, Md. 21046, (301) 725-1585, Extension 223, or E-mail: ghendric@fcc.gov.
End of listing : .

I hope this helps.

If he's getting it live from a dealer, have the dealer install the CW filter
along with any other options. They won't charge more and might give them
a chance to check out the radio and verify performance prior to taking
it home.

I'm currently attempting to construct a done decoding system using the Lm567 but having great problems in making the applications circuit in the national datasheets functioning. The datasheet gives a couple of design formulie for f0 (centre frequency) and BW (bandwidth). I've been trying without sucess to achive recongnition of a pure 415Hz sine wave using the following component values. Timing components .22uF and 10K (actually variable between 7.5 and 12.5K), loop filter = 100uF and output filter =220uF. After much experimenation I've reached a dead end. Does anyone have any suggestions or alternativly any ideas or suggestions regarding decoding this tone.

kind regards

5460. HELP: FT-8000R and 9K6 Packet

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-26 00:00:00 UTC
From: quandt.pad@sni.de
Message-ID: <5f1437$fph@linus.pdb.sni.de>
Source record: 181869

Hello,

some weeks ago i bought a FT-8000R and like to use it in packet radio.
1K2 packet is working very well, but 9K6 (G3RUH modem) does not.
The main problem is on the RX-Side, the TX is ok. I have found,
that the higher frequency parts of the AF is limited by a R-C seriell
combination (100k / 1uf) at pin 9 of the FM-Demodulator (UHF) circuit.
Many other users here in Germany have the same problem.

Some users have connected a 33nF capacitor in parallel of R2211 (100k)
and 9K6 works much better.

Is there any other solution available ?
YAESU in Germany has no idea.

73, Ulli EMail: quandt.pad@sni.de

Hey folks, get over this spamming the newsgroup thing. Your even
sending them to the commercial group. the send to line that follows
this article is longer than the winter day. GET OVER IT and watch were
you send your replies to. I am a ham too, but this is getting
rediculus sending replies where they have no purpose.

Getting off my soap box now ... thank you

Consider that along with the intermod-free reception you also get PL
tone decode and DTMF tone squelch. These things are hardly standard on
much more expensive H/Ts.

I've had several of them over the last couple of years. They are very
good radios, and do a good job on the amateur band too. They have great
audio, and a high capacity 5 watt battery standard....Gary N7GJ

5470. TS940 vs newer receivers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-26 00:00:00 UTC
From: ga19989@evax01.d51.lilly.com
Message-ID: <1997Feb26.100209.1@evax01.d51.lilly.com>
Source record: 181879

As a died in the wool TS940 user, I have been believing that the 940's receiver was as good as I could find for 160 and 80 meter DX CW. Even though copy is rough here in the "black hole" of DX, I have been able to work a number of countries on these bands with just 100 watts. It never occurred to me that the signal reports I was giving were lower "S" value than the ones I was getting because I could not hear as well as the guy on the other end. After all, I have line noise at 30-40 dB over S9 most of the time, so the 940's noise blanker does a fair job of removing it... but background noise on those two bands still runs S4 to S7 most of the evening. I have a number of receive antennas, an ANC-4, and a DSP-59 audio DSP to kick in to help the signal.

Now a friend of mine buys a new Kenwood TS570, the one with audio DSP built in. And I try it out at his place. Even though he has little auduble line noise, he also does not have an array of beverages, ewes, and full size 160 meter antennas at his place. He has an 8 band vertical (80 thru 10) mounted at ground level.... just like one I have at my place. And the one at my place is not as good on receive as the ewe or beverage.

But what I hear on the 570 amazes me. It's early evening, when all I hear at home on 160 M is static. And his 570 is dragging in European signals above the background noise. When he kicks in noise reduction (NOT the noise blanker) the CW sounds like it's a code practice tape! On 160! Not only that, but at the 50 hz filter bandwidth (actually about 80-90) there was practically no ringing.

So the question to recent buyers of new rigs is:
Compared to your experience with older top-end receivers (like the 940 WAS ten years ago) how do the new receivers stack up? I know that audio DSP will overload without a mechanical filter as well, and I saw it on Eric's 570 (he has a 500 Hz filter on order). But what about fully loaded TS570, TS870, FT1000MP, etc? How much difference do YOU notice?

BTW: Eric has a comlete TS-830 setup for sale, with speaker, tuner, and external VFO.... if interested I will pass your name along.

Thanks

Mel KJ9C

I 've been subscribing to and reading Nuts and Volts since 1982. They have evolved from a want-ad rag into a full blown magazine. Yes, they have some eccentric behavior, giving away copies at tradeshows and certain distributers, etc. Not everybody lives in an area where free access to the magazine exists. I live in Oregon and only know of two or three places where you can buy it. I have always been treated with respect and courtesy when dealing with them. I missed a copy once and a call to them resulted in a prompt replacment. If you have a personal dispute with them, write them a letter and explain your displeasure. I've been buying and selling electronics via their magazine for 15 years. I know they're not perfect, but they're the best resource of their kind that I've found to date. CONSTRUCTIVE feedback to them should only result in a better publication.

Randy Bray
Corvallis, Oregon.

Hi name here is Rick. I have a Bearcat 890-XLT for sale.
It is in execlent condition. Comes with Box, manual,
Antenna and wall transformer. The specs for the scanner
are as follows.

200 Channels
10 Banks
7 preprogrammed NOAA Weather Freqs.
7 search bands
Scan Rate: 100 channels per second Turbo Mode
20 channels per second normal Mode
Scan delay 2 seconds
Audio Output 3W

Freq. Coverage:

29. to 54. Mhz NFM
108. to 136 Mhz AM
137 to 174. Mhz NFM
216 to 224.9875 NFM
225 to 399.9875 AM
400 to 512. NFM
806 to 956. NFM less cellular band

Also has an event counter, a VFO mode with large tuning knob.
A WX alert alarm that is activated by NOAA weather alerts.
And is CTCSS compatible, if the optional board is installed.
I will take $200 for this scanner.

People,
You are missing the point! The object of newsgroups is the free exchange of ideas and information, just like ham radio is supposed to be enjoyed. Not by ignoring peoples views just because you don't agree with them. That is what makes the United States of America GREAT!
Not censorship!
You don't like don't logon or turn off your radio.

<discussion of BBS censorship>

>>The BBS for which I'm a co-sysop has been on the air for about 8
>>years, and in all that time we have never locked one legitimate ham
>>out of the BBS for any reason. We've handled dozens of Burt's

>It is your right to pass or not pass as you see fit. In general I agree
>with you Burt looks much worse for his posts. However if a sysop
>chooses not to pass anti ham propaganda that too is his right. After

Correct. I agree with and support this right. However, just because
you have a "right" does not mean you have to exercise it. After all,
you have a "right" to make a fool of yourself, too. Remember, power
corrupts, and once you start censoring what goes through your BBS,
you'll find all sorts of excuses to filter out anything that annoys
you.

>all you guys supply the time, equipment, location and expertise we all
>enjoy thus it is your foot ball and you make the rules. Most reasonable
>people would accept this but then Burt is not reasonable.

And if all the Sysops who find various things unreasonable start
killing them, the network collapses. If you don't want to be part of
a free-flowing information net, then you have no business setting up a
BBS on such a net. Put your little up-tight closed BBS off on some
peripheral channel, and lock out folks to your heart's content.

I repeat: It's legal to lock out folks like Burt (or me - it's
happened more than once) but it's not ethical, nor is it in the spirit
of Amateur Radio. It's hard to overemphasize the importance of this
principle.

Hint: How far do you think the Internet would have grown if it
catered to the same sort of censorship that some hams practice?

If all the activity you want to check is between 400-500 MHz, and if all
you want to find is repeater inputs, is there a problem with just using
the standard offset formulas? 406-470, input is 5 MHz higher than
output, except for some regional differences, like Southern California
ham repeaters, which are low in/high out. Above 470, the input offset
is +3 MHz. Of course, 470-512 is only used in, I think, the 25 largest
metropolitan areas, elsewhere it's for UHF TV. Or am I missing
something more here? Oops, I'm assuming you're in the US here, too...

Hey gang,

My confidential source in Benton Harbor, Michigan, told me that all boxes of corn flakes packaged between April and August will include *FREE* FT-920s.

Also, a major fast-food chain is planning on giving them away with kids' meals for $1.99 (only 99 cents if you get the Super Size meal). The power supply comes with every order of large fries.

Oh -- and look in your Sunday paper. If you buy three jars of peanut butter, you can send in for a $500 coupon towards the purchase of a new FT-920. But hurry! Offer ends soon and supplies are limited!!!

73 and keep 'em guessing,

Meade, KA4RQB
Richmond, Virginia

Hershman!

Are you a politician?! How can you be so accurate about figures? ;-)

The 920 replaces the ft990 as they have all been sold out in the uk.
It is unlikely that the 920 with a better spec would sell for less
than the old price of the 990. Inconceivable even!

However, if it does I will eat my hat, and you'll just have to trust
me that I do actually eat it!

5512. Att: 1000MP owners- a DSP Question?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-27 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5f4o1e$ct6@geraldo.cc.utexas.edu>
Source record: 181711

Hello- and thanks for reading this.
I am considering buying a 1000mp. (coming from a TS-850)
Because I'd have to buy one sight unseen, I have a few questions from you
un-biased REAL users out there.

Is the AM RX excellent? How about that Synchronous Detector?
Does it sound good with the Pass-through/6khz filter settings?

On the 4 NR DSP "modes"- Can you set any parameters on
them...ie. attack times...etc? And- how do they sound?
Do they have that slight "Phase roll" sound (which I like)
or do they muddy up the sound (like some NR modes which
really narrow up the passband) Is there one setting that
you can use for general lowering of the noise without
greatly degrading the SSB RX quality?

Can the Packet mode selection DSP filter be set for other
Digital modes as well?

I really appreciate this...and would like to get any comments
you would like to offer on this super-looking rig.

Thanks-

Bob Nagy

Allow me to extrapolate here for a moment.....

If I read this correctly, If a transceiver is designed to be easily modified, then it must be 'type accepted' (or approved or what-ever) before it can be marketed and sold. That would lead one to believe that if buy a radio that can have its coverage extended mearly by removing a jumper for instance, then it should already be 'type accepted' for that use. Otherwise, it could not be marketed and sold.

Continuing, (and recapping,)

> It is a violation of the Commission's regulations to: (1)
>import or market a transmitter that is designed or intended to
>operate on frequencies outside of the ARS bands, if it has not
>been issued a grant of equipment authorization for the radio
>service(s) in which the transmitter is capable of operating; (2)
>import, market or operate a transmitter that requires a grant of
>equipment authorization but for which no grant has been issued;

OR,

>(3) transmit on a frequency allocated to a licensed radio
>service without the appropriate Commission-issued station
>license. Violation of the Commission's regulations will subject
>manufacturers, importers, vendors and users of this equipment to
>appropriate criminal penalties as provided for by federal law(s),
>including fines and/or imprisonment. In addition, the equipment
>described above can be seized by, and forfeited to, the
>government.

As I read this; if I have a modified transmitter, and I'm operating under a valid business license, then I'm OK because of the giant word OR between #2 and #3.

How do you interpret this?

BTW, thanks for the great post. Finally, some real information

>be.

A popular quote used on the ham bands when faced with malicious QRM and vocal vandals, is "don't feed the animals". With that view in mind, this will be my last post on THIS subject. I really don't expect to see any logical debate flowing from the likes of burt, who could EASILY sail around the world in his own wind powered sailboat - but regardless of my own personal failings, I have YET felt the lonliness and need to advertise on Internet in an effort to find someone who will talk to me on the radio. Party on, Burt dude....

Willco makes what they call a ICM1024 Icom No-Fail Memory board that is sposed to take care of that problem. They indicate it will work on the R-71, IC751 & 751A and the 745. It also expands memory channels, extends reception and a few other things. I've never tried it myself and the last price I saw was around $125.

5521. RE: Best Dual Band HT Antenna???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-27 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <9702271152079377@atdbbs.com>
Source record: 181720

>>Hi, I am looking to get some input as to what you guys feel is the
>>best dual band HT antenna, preferably one that can be bought
>>somewhere.

Well, the Diamond RH77CA outperforms about anything out there...but its overall length is 15 inches...

There's another 15-incher made - but it's made from what "feels" like piano wire - very thin and flexible. Also a good performer.

Then there's the "regular length," "piano wire" antennas - at about 6 inches.

My personal favorite is the Maldol AH-209S Active Hunter. Three-inches long, 3/8" in diameter, rubberized coil (feels like one of those rubber-grip pens). But I happen to live in a repeater-rich area - so I don't always *need* the RH77CA mentioned above.

Get to a dealer with a two or three day trial period for returns, and test a couple yourself!

Let us know what you decide upon.

Still trying to locate Hallicrafters parts for SX-71 and SX-43 receivers.
Some say the hunt is more fun than the kill but I'm starting to wonder.
Need the following items:

SX-71 - Need cabinet, Reception, Main and Bandspread tuning knobs.

SX-43 - Need S meter, Selectivity knob, Main dial cover, Bandspread dial
and cover, 500 ohms 1 watt S meter control pot Hallicrafters Part # 251569
or IRC Part # W-500 or Clarostat Part # 43-500, and a power transformer
Hallicrafters Part # 52C143 or Stancor Part # P-6313 or Merit Part #
P-2953.

I will consider junkers if they contain the above items.

Thanks for reading.

Walter

Nuts and Volts is for buying and selling stuff. Their articles are mostly trash, with lots of bad information. Remember however that they were originally all ads. I subscribe for that reason only and I am generally pleased. Buying them for "information" is probably a bad idea.

Feb N&V showed up today, the 27th.
I called and was told it had been mailed on the 1st.

I asked if they could look into it and was told that Larry (editor)
would talk to the post office. They also added a month to my
subscription.

I wouldn't be complaining if I had a lifetime subscription but seeing
that I'm paying full fare and other rags are prompt for
the same $$ every month, it's a reasonable expectation.

5534. Opinions on Alinco DX-70T/TH?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-27 00:00:00 UTC
From: cvoid@netcom.com
Message-ID: <cvoid-2702971146300001@axolotl.macromedia.com>
Source record: 181733

Does anyone have an opinion on the Alinco DX-70T/TH? I'd like to get an HF rig with 6-Meters and was thinking about getting one of these... Will be using it as a base rig, not a mobile rig. Was also considering an Icom 706, but the Alinco is much more in my price range (and I don't need another 2-meter rig!).

Any info is appreciated.

> and radio setup might be better.

Other problems I've found with doppler units: When you are really close
- or the transmitter is very strong,
the pin diodes get swamped, the coaxial cable starts to leak and the
reading becomes useless. Also, the
audio that drives the doppler can't be common with the speaker of the
receiver otherwise noise in the
car will skew the readings badly.

Your method sounds a little more cut and dried. I've tried
triangulation
but when you're in a hurry it's a time-waster. You get to know how
close you are
using two guys and two radios. The entire group I was with were all
really
good. None of them used any sort of plotting though.

Driving a fast car helps too!

YES YOU ARE CORRECT! However, certain dealers tell people calling up
that the new radio is marketed for Japan or England only and will not
replace the FT-990. They darn know the FT-920 will be available here!
They want to persuade the new Inexperieced ham to buy NOW.

You wanna know what? Are you a ham? Or is that a FAKE call, because this doesn't sound like an amateur's proposal! And you are idiots!!! This is our spectrum, they have enough!!! WE provide emergency communictions, to save your ass when a disaster strikes!!!

I think we have found the problem here, Glen. You don't seem to have
a firm grasp of the definition of the word 'network'. Networks don't
collapse from lack of traffic, they just move the existing traffic much
faster.

I traded for a remote tuner made by the CAI (Communications Associates Inc.) of Huntington Station, New York. I've tried the telephone, and didn't get anywhere, so I can only assume they're out of business. The one I have doesn't have the control box, so I'm going to have to build one. Does anyone know what voltages are used, and which pins to apply/receive the voltage from/to? (I guess I'm asking for a schematic or owners manual to make my request simpler!) It's a model CU-4-6. I want to use it in an antenna project this coming week- thanks for any information! 73, Web- KR4WM

http://www.ualr.edu/~hamradio/index.html

In big bold print you'll see, "UALR's Callsign Database Server",
just click on that link. This is a very powerful search system.
If you have the callsign, this can find the address. If you
give it an address, like State & Zip code, if will find all the
Hams in that area.

This is a useful tool for finding all the Hams that live
in your area. A club could use it to create a mailing list
to send club flyers to.

Sincerely,

Bob Diaz

Try http://www.icomamerica.com for their homepage, but they don't have
any tech support links from the webpage. There are listings there for
their tech support phone line (sorry, no toll-free: 206-454-7619) and
other stuff. Icom has historically made folks pay for their own help
calls, at least at the Bellevue, WA headquarters. 75540,525 is their
CompuServe support forum, which is as close as they get so far to online
help. Hope this helps.

(I'm always suspicious of flames such as above when the author fails
to include any of the remarks he's disagreeing with. It usually
indicates he has no defense, so instead he insults.) What portion of
Dana's statement do you take issue with, Bill? As I recall, Dana's
concern with taking an amateur radio and using it out-of-band was
in regard to the freq'y agility of such radios. It's a very valid
concern.

I've already pointed out why someone shouldn't use an amateur HT
for fire service communications; its freq'y agility and non-resistance
to the heat of fire were two main points that caused me concern
(I had a portion of my helmet melt in one structure fire - can't
imagine any amateur HT being able to survive such heat, but commer-
cial radios *will* be able to withstand such temperatures).

Let's supposed someone wants to use their 2m HT in the marine band.
Most boaters know that they can contact the Coast Guard on ch. 16.
But what's a channel designation mean to someone whose HT only
reads the freq'y of operation? Suppose you have an emergency and
the USCG tells you to shift to channel 22A? Or channel 12? Those
designations are useless to someone who doesn't have a channel-to-
frequency chart in their hand. Bridge-to-bridge comms are supposed
to be done on channel 13. What freq'y are you going to set your HT
to? The marine operator just asked you to shift to channel 83 for
a phone call. What freq'y is that, Bill? Are you going to commit
to memory all 80+ or so frequencies/channel numbers?

You're sore because we've presented some valid reasons (aside from
the legal issue) for not using an amateur radio for out-of-band
service. Don't be sore - just open your wallet and *buy* the proper
radio for your needs.

Jeff KH2PZ (former fireman *and* former Coast Guard radio officer)

5548. Grounding in Ford Truck

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-27 00:00:00 UTC
From: john d wilson <jdw@cs.wustl.edu>
Message-ID: <33165742.27BA@cs.wustl.edu>
Source record: 181747

Was courious if anyone has had a similar experience with their VHF/UHF radio installed in a Ford vehicle. Specifically a 96 Ford Ranger.

I have run the cables (#8) from the battery direct into the cab. I have tried different antennas, so I think I've eliminated the antenna being the problem. The mic has been checked out, and even swapped mics with a friend that has the same brand of radio. The radio is a Kenwood TM-732A dual band. I had this radio installed in a Mazda Rx-7 with the same glass mount Larsen KG-2/70 dual band antenna and it worked fine in there.

The problem report that I'm getting is that my audio sounds like I'm hanging the mic outside the window. Like wind blowing into the mic etc... This noise is not as appearent at 5 watts, but is really bad at 50 Watts. At 10 Watts is there, but not objectionable. The truck is actually quieter than the Rx-7 was, so I know the interior noise is less.

A friend has an Explorer ('93 I think), and he found that the further back he ground the gear, the less noise he got on the air.

I've tried to resolve this by temporarily removing the return to the battery (at my fuse block in the cab), and grounded it to the frame. This produced no noticable difference. I also took voltage measurements under load, with both grounds, and there is not a significant difference in the voltage, if any at all. (used a Fluke 23).

Anyway, I was courious if anyone on the list her might have some ideas on how to fix this problem.

Thanks,
john/n0tyz

5549. Dynamic range

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-27 00:00:00 UTC
From: ua9cdc@utn.e-burg.ru
Message-ID: <5f1uuhra1@news.e-burg.ru>
Source record: 181750

The other day we had 4 rigs in one room and a simple set-up described
in handbook to measure sensitivity and dynamic range (two filtered
crystal oscillators, combiner and set of attenuators). Here are the
results:

radio sensitivity 2 tone dynamic range notes
ts-870 -125dbm 89db S/N 3db AIP off
ic751a -133dbm 95db -,,- preamp off
ic-775 -133dbm 99db -,,- preamp off
ts-850 -137dbm 102dbm -,,- AIP off

So as you see 870 is the worst rig out of 4. With AIP "on" 870's
sensitivity went down to -114dbm.
I wonder if somebody did that with IC-756 and FT1000MP.
Any comments would be appreciated.
Igor,
UA9CDC (N3TOD)

Doppler is good until you start messing with multi-path (Where the
signal is bouncing all over the place). That is when a regular beam
and radio setup might be better.

>Two people and two handies work like a champ.

This is a good technique, but a radio hooked up to an attenuator and
beam or quad is better. Use a compass and map, too. That way you can
plot the signal (Draw a line from where you are to the other side of
the map in the direction of the signal.). Don't forget to calculate
in your declination! HI. Do this 3 or 4 times, and where the lines

all intersect, is the area of where the transmitter most likely is.

>The key is that you need two people to make this work. Reflections play
>hell on VHF and
>UHF signals. So you and your friend should hop out of the car and stand
>20 or 30 ft apart.
>When you both get readings that agree - you've got a good direction (90%
>of the time anyway!).

Actually, one person can do everything very easily. But it is fun
with two people. Reflections DO play hell on these signals. Our
T-Hunting group here in Albuquerque bounce signals off of any of the
mountains in sight. For some reason the best signal is towards that
mountain...
Two rules in T-Hunting: ASSUME NOTHING and NEVER TRUST A T-HUNTER.

>Good luck - it's a riot!

I can't agree more! For more information on T-Hunting, please visit
the site below. This is my group's site and is one of the absolute
best around. The URL is:

Man, If -I- sold the world's most popular 2M HT, I wouldn't give it
up...<g>

Nope. Although Radio Shack has their dual bander coming out very soon
(completely incompatible with the HTX-202/404), I am sure they'll
maintain the HTX-202 for a while longer.

>>...the new HTX204 dual bander...

As I reported here exclusively earlier this month:

Radio Shack will unveil its new dual-band HT - the HTX-204 - next
month (Catalog Number 19-1124).

-Compact size (NOT the config. of the HTX-202/404 by ANY means!).
-120 total memories (2 x 60).
-2 Call channels (US frequencies).
-Large, backlit LCD screen.
-Six character text display.
-DTMF 15 character memory x 10.
-Cross-band repeat.
-Clone over the air.
-Seven scan modes. 3 Hold types.

At 12VDC:

High = 5 Watts
Med = 2 watts VHF / 1.8W UHF
Low = 350mW

With supplied 7.2V battery:

High = 2W VHF / 1.8W UHF
Low = 350mW

-Four modes of dual watch.
-15kHz steps.
-Programmable battery save...as low as .20mA.
-Low battery indicator, auto power off.
-RF attenuator for each band - programmable.
-Auto repeater offset

...and more.

> 1K2 packet is working very well, but 9K6 (G3RUH modem) does not.
> The main problem is on the RX-Side, the TX is ok.

I ran into a similar problem with my icom 281h and both of my MFJ
tnc's with the G3RUH board attached at the disconnect header and
wired per factory specs.

I found that the mother board (tnc) was loading down the signal
from the rx. when I removed the 9600 rx input from the regular
tnc connector and provided its own dedicated connector, I had
no problem at all with operating 9600b. worked plenty of
terrestrial and the digital sats with no problem.

before I found that, it drove me crazy. Icom and MFJ had no
clue as far as what to do. But after I found the problem,
and called them up, they said they have had this happen
several times before with simillar setups.....gee, thanks
for the help!!!!!

maybe this will help, I sure hope so, troubleshooting 9600b
is sometimes a pain in the rear.

Hams are so brave with insults, from a distance.
I receive many packet messages of support, would you like to see some?
I figured hams could not think fast enough to engage me in a live
discussion,
so far after years on here I have been unable to get on on the air with
one to do so.

I will easily win any discussion because I have the facts and I engage
students saily, they are far more challenging than most any ham could
be.

This radio is NEW, all Acessories and rack handles never used and are still sealed in plastic. This radio came from an Estate and was found still in the factory box and never opened. It also has the optional UT-36 Voice Synthesizer factory installed. This radio retails for $8000. First certified check for $3995. E-mail tbolt@ix.netcom.com

5579. IC-751 EPROM???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-27 00:00:00 UTC
From: Marvin Moss <mmoss@gelac.mar.lmco.com>
Message-ID: <331581C8.2168@gelac.mar.lmco.com>
Source record: 181780

I have a IC-751 with a bad battery and have lost the info in RAM
including the main program. Several years ago, perhaps 10 or so,
someone (third party) had a replacement that was some kind of
EPROM-based arrangement so that when the battery failed you did not lose
the program and did not have to send the rig back to ICOM for battery
replacement and restoration of the program. It also allowed an increase
in memory of freqs to 132 or something like that.

Does anyone remember this and can point me to the place (or ad in QST
for example) where these might still be available??

TIA, Marvin

I've had the 751 for over a decade. I love it! However the 756 will
just "hear" signals the other will not. The noise figure is much
better and the ability to edit interference has been greatly improved.

The presence of the scope (lcd) makes it incredibly simple to find
other stations on the bands quickly and gives one great insight into
signal strength and quality.

I will keep the 751 but it will be a stepchild to the 756.

Regards,

Bill-W5YJB

There are 2 different 8 pin dins. The pin numbering is different as
well. You can get the unpopular one used on Yaesu and Kenwood from their
parts department and also from East Coast Transistor 516-483-5742. The
part # is E07-0851-05. They cost about $12, I think.

>Is it cell blocked?

Every piece of radio gear manufactured after April 1994 and sold in
the U.S. has to be cellular block. Government agencies can obtain
unblocked equipment and test equipment is exempt from the cellular
block.

Some dealers may still have older (pre-1994) receivers but it's hardly
likely.

From: Thomas Gasta <tomgasta@worldnet.att.net>
Message-ID: <5f47p1$3tl@mtinsc04.worldnet.att.net>
Source record: 181788

Actually, if RT Systems is in fact selling the FT50R-D (with the FTT-12 installed) for $347. This is a deal as the FNB49 battery that is given away by R and L is not that great of a battery, large and no current. R and Ls total for a FT50 with a non-installed FTT12 would be $355, but would come with the free battery and the original FTT11 keypad. So you need to decide if you want the old keypad and free battery for an extra $8. Maybe R and L is the deal after all.

Miracle Baby - BNC
Standard C508 Duck SMA

SMA-501 SMA (I've seen dummy loads better than this one)

Has anyone figured out how to fix the CTCSS falsing problem in the decode?.

Doin' the mod watch it when turning the band 'Free' remember to turn the radio off. I pressed ptt instead and had a hard time changing the band. I don't know how I did it but I tried PTT, Knob, lamp like 25 times and worked!..

> dual band HT antenna, preferably one that can be bought somewhere.

You know, between the wife and I, we have had about 8 different HT's in the past two years. Mainly Yeasu and ICOM units but one or two other units thrown in. I think I have bought every aftermarket HT antenna out there, long and stubbie. It nver fails, the factory antenna always out performs the aftermarket. On dual bands the aftermarket may do better on one band than the original, but it usually is MUCH worse on the other band and the original antenna always provides a better balance.

Burt,

It's my opinion that you go looking for trouble. You know what they say
about looking for trouble? You find it every time!! Hee hee!

As far as feeling superior to most Amateurs. That's really nice!
I'm glad you feel that way.

I remember getting into it with you over on the Relaynet years ago. You
were giving me the gears for sending out a general message of thanks to
all that replied to one of my polls. At the time I didn't realize that
it meant so much to you. I still don't understand why!

I don't know what you are trying to prove. Your message isn't clear.
Who was it that said Communication without intelligence is pointless?

Cheers!

Don't forget when you are figuring out the U.S. price that freight from Japan to the
U.S. is FREE.....Right?????? Ummmm.....gee, that doesn't figure into the
equation now does it? Nope, the dealers are ripping everyone off. They don't need to sell their their wares to make a profit. They don't want to stay in business. Naw! ...and we don't want them to stay in business.

hershman you fart-head, go ahead and order your radios directly from Japan. In your egomaniac stupor you forgot to figure how much it will cost to get it to your door. And then when and if something goes wrong with it how much it will cost you to send it back to Japan for warranty work and then to get it back. Maybe about forty cents right? You flamin' sheep-dit.

Love,

Nit

HELP*
I've got a new-to-me TS-430 that looks like it has had a number of mods done to it, and maybe some undone. I'd actually prefer it to work as designed; at least until I'm more familiar with it.

My biggest concern is that the VOX and Send/Recv switches have been somewhat bypassed when in CW mode. Even if the VOX is on manual and the standby is on Recv, when you hit the key you're on the air. I've noticed that when you switch the mode from SSB to CW the frequency display goes up by 800Hz.

I've opened up the radio to look for any obvious mods. Unfortunately, there are so many components on the bottom (solder side) of the RF board that I'm not sure where to start. The only definate thing I have to go on right now is that PD wire coming into connector 9, and the WRC wire coming into connector 10 have been cut.

I'd sure love to hear from someone that has some experience with these radios that wouldn't mind walking a newbee through some of this.

Thanks,

--

Check out Doppler Systems, P. O. Box 2780, Carefree, AZ 85377,
(602) 488-9755, (602) 488-1295 fax. They make some of the best
doppler units available.

Also, check out the book Transmitter Hunting, Radio Direction Finding
Simplified by Joseph Moell K0OV and Thomas Curlee, WB6UZZ.
Inside you'll find complete construction plans for the Roanoke
Doppler. I think a pc board and complete kit is available for this unit.
The book is published by TAB Books.

Have fun and 73,
Richard

I have the earlier generation FT290R (not the Mark II) and I love it. I have worked 15 states from Utah with it, albeit about half with an outboard Mirage B108 am and a Cushcraft Boomer. I have had a number of sporadic E contacts with 2 1/2 watts and the telescoping built in whip. Some of those to Texas and the midwest. The Mark II, though somewhat pricey, looks like alot of fun. Good luck and 73.

Remember guys & gales,this is a radio HOBBY ,lighten up on Rob.Its good
to see someone using brain power working on a project,an idea,anything to
make this Hobby more fun or usefull.Gee,I guess that makes all thoughs 2
meter repeaters bad for using a beep to signal the end of a
transmission,something NASA started way back when(or was it us hams?)

5616. Help with KDK FM240

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-28 00:00:00 UTC
From: "Tim Pearson,KU4J" <ku4j@HiWAAY.net>
Message-ID: <33167B29.434E@HiWAAY.net>
Source record: 181618

I borrowed a friends KDK FM-240 (no manual) after using it
a few days it locked up in a wierd mode where the display
was showing 00.000 mHz and I could tune only 00.00 to 00.9999.
I found the reset button on the inside of the radio, but when
I reset it it said BASE 00, which seems to be a settable value
along with RLF RHF RTF and OSET? menus. I have no documentation
but I need to get this set back to working order. Anyone have
a manual or know what values should be set to get it to work?

Thanks! Tim Pearson, KU4J
Please email to ku4j@hiwaay.net

Jeff,

I'm agree with everything you say except one point and valid it is.As far as an amateur HT not being able to withstand extreme temperature changes such as fire I can only say one thing.Being in the two-way business for almost 10 years I have seen many commerical versions not survive fire any better then a fireman carrying his personal amateur HT.Also the case on the COMMERCIAL Vertex VX-10 is identical to that of any Yaesu ft-10,40 or 50.I know, I've had them both apart.The ft-10 and VX-10 are identical except for programming in the micro.

5618. Roller Inductor

Source record: 181653

The only problem now-- is obtaining software
that will let me set the address of the 756 -- which is 50. The
shareware version of the 706 software won't allow a non listed entry. I
may have to wait a bit.

You might want to change the address switches to make it a unit that is
recogonized by the program. I did that on one of the early shareware
programs that was designed for a 735 w/o any provision for a change and
the 765 worked fine. Just a thought till you get your hands on a program
that lets you pick it in the config file or where-ever.

Adios

10/12/15/17/20 mtr Butternut HF5B minibeam. 6db gain, turns with
TV antenna rotator (also available). Beam never used, rotator
used less than 5 months while on Army assignment. Paid $300
for beam. Will sell beam for $195 or beam and rotator for $235.
Will trade beam and rotator for AL811 linear or similar amp.

5627. yaesu ft-11r and ADMS-1c

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-28 00:00:00 UTC
From: Adam B <adamb@rockland.net>
Message-ID: <E6AHvw.H1J@nonexistent.com>
Source record: 181655

I've used the adms software a few times but just noticed these two "problems":

after programming the radio, going to a channel where both T and SQ are displayed, and changing the pl mode to off, and then on again I CANNOT put SQ on, as if the ctcss decode board was not there, although it works on the memories that I don't touch. after turning the radio off and on again, it functions normally.

also, after programming the radio with an alert ringer of 1 ring, the display reads AND the bell rings 2 rings! this is not an option on the software OR radio (although the radio is obviously capable of it, so why is it hidden?). If I change the number I cannot get back to 2 again.

I have no clue what these things are from. It must have something to do with other options set at the same time. I wonder what else can be done via this link... is there any software out there (not by yaesu) that uses the link to unlock other hidden features? has anybody else experienced these or other 'glitches'?

please mail & post, thanks.

5628. Re: FT-920 PRICING !! WOW !!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-28 00:00:00 UTC
From: Joe Fitter BV/N0IAT <joentam@transend.com.tw>
Message-ID: <33171FCA.55F8@transend.com.tw>
Source record: 181656

Hi Squeak,
All due respect, I sent Hershman the information about
pricing on the new FT-920. I might have to slide my chair up to
the table and eat crow later, but, the price for the FT920 is
posted on the Japan Yaesu Web page. It's 198K yen. In Japan (at
least when I lived there from 1992 thru 1995) the street price
was always about 80% of list. Even at a lousy 100 to one on the
yen/dollar exchange rate, that new Yaesu shouldn't be more than
1.5 Kilobucks in the states when it comes out. Ok...maybe
$1600 for the Dayton weekend since it's new.

I know, for example, the Icom 706 transceiver in JA lists for 119K
yen. The street price (in Japan, Singapore, Hong Kong) is about
$1000. The US commands a premium, no doubt a bit of profit taking
by Icom America (or by the ham stores) from the 80 yen/dollar days
of 1995.

I'm not a manager of a USA ham store, so take my comments at face
value.
regards,
Joe
BV/N0IAT

<<< San Jose, CA. >>>

Had to take antenna down because of landlord.

37 foot Telescoping Mast originally designed to support a 10-80 meter inverted-V, but could be used to support a small rotor and beam (28mhz up to vhf/uhf).

Material used is schedule 80 PVC Tubing, in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75". The sections are held in place by a u-clamp and thru center eye-bolt arrangement. Each u-clamp has 2 outer eye-bolts, along with the thru center eye-bolt, which are used as guy points.

The bottom 3 sections use PVC sched 80 reduction union joints (very beefy) which I reamed out to allow upper sections to slide thru freely. The three over-lapping sections are over lapped by 12, 16, and 18 inches, from smallest to largest dia., respectively. Each upper section has 2 sets of 3 spacer bearings that take up the excess play inside each over-lapping section.

As you may well have gathered, I have an Engineering background and took some time designing this Telescoping Mast. It wasn't something I just threw together.

The last 2 years in San Jose, CA, has brought storms with winds as high as 75 mph. This Mast barely moved during these storms. Also, I use three sets of guys which are marine-type nylon rope that is UV resistant.

Mast is more durable and can withstand higher wind speeds than a steel mast, when guyed properly. Also, Mast doesn't interact with antenna like a steel mast would.

73,
-gary

First it may be easy to remove a jumper it is just the problem of which resistor or diode to remove that makes it difficult. Also by using your logic you could argue robbing backs is not agaist the law if you don't get caught. Seriously there are legitimate uses for amateur radios that transmit out of band such as use by people with valid MARS license and also many amateur operators use HF radios to drive vhf/uhf transveters and never transmit on frequecies where the radio must be type accepted.

Gee I hope your not a lawyer or logic designer. Let me write this a little different.

Fine and/or jail = operate a transmitter that requires a grant of equipment authorization (for the band your transmitting on) but for which no grant has been issued OR transmitting without a licence on a band that requires a licence.
Have fun. Good hamming.

In Australia Optus Cable Vision is rolling out a massive overhead cable
television and phone system. The system comprises optic fibre and coax.
Question-:
What are the caracteristics of the coax. impedance, loss etc.

Regards

Peter Miles

I wish to convert a A.W.A. Model RT80 Type 2M 82004 transceiver with a
frequency coverage of 450 - 485Mhz to 438Mhz.
If anyone has had experience with this task I would appreciate any advise
and or references that can assist. I believe that a change of crystals and
modest retune may be all that is required.

Regards
Peter Miles

Sorry, but the Radio Shack handheld is -->not<-- made by Icom.

It so happens that the company that private-labeled the radio for
Radio Shack copied Icom's mechanical and electrical specs for the
battery pack and its interface to the radio, but the radio is not, nor
has it ever been made by, or designed by, Icom.

If you don't find a Drake replacement transformer (have you tried
calling Drake? - They have moved recently, so you will have to get
their new phone number) try the Peter W. Dahl Company - they have a
web site, but I don't have it bookmarked - you can find it thru Yahoo!
or any other good web search engine.

Good Luck!

5643. Advice/Opinions - FT51 vs FT50

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-28 00:00:00 UTC
From: "G. Scott Stewart" <gstewart@direct.ca>
Message-ID: <3316A302.19A0@direct.ca>
Source record: 181671

Hello everybody (well, those who reads this anyway ;-))

Looking for a new Yaesu dual band radio. Looking at FT-50 and FT-51.

If anyone who has experience with one, the other, or better yet both,
would shoot me a quick reply, I would be greatly appreciative.

By the way, I am not interested in used rigs, sorry to those who have
same for sale. :-)

Details for those who care,

Active Ham, take radio everywhere, have FT-416, case showing signs
of...well...abuse.

Have mobile, HT is just a backup/bicycle/hiking/public service rig.

Like FT-50s ruggedness (ie. mil-spec)and extended recieve
Like FT-51's Lit keypad and controller mike

Need for somebody(s) to make up my mind for me.

Thanks in advance

Scott

Thanks for setting these guys straight!
I am going to BUY DIRECT and bypass DEALERS like HRO and AES. A friend
of minewill get the toll free phone # for some Ham stores in Japan.
CUT OUT THE MIDDLE MAN and SAVE $$$$!!! BuY DIRECT !!!!

5646. FAQ: Plectron and Motorola Alert Monitor Receivers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-02-28 00:00:00 UTC

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 |
- 42 and 42 - 54 MHz. |

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s | use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built

in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service for the Plectron P1 and R700 models is

offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

Although I am not familiar with your exact HT, many HTs get pretty warm
after transmitting for a while...that's why many use aluminum for the
backs of their cases - to act as a heat dissipator.

5656. Drake L7 schematic needed

$12? That's outrageous. This oddball 8 pin DIN is available here in
Sweden
for the equivalent of 60 cents... I had the same problem with my TS-830
X-verter port, bought one "standard" 8 pin DIN and it didn't fit. Went
back
and returned it and got the correct one.

I Agree...and live in California near Silicon Valley. Have seen N&V as
give aways a couple of times...but usually have to buy it if I want it.

Can't blame a small magazine for giving away "promotional" copies to try
and increase their base of readers. Actually the more people that get
interested in the mag and subsequently subscribe or purchase it otc as I
do, means the more advertising they get, and they bigger budget they
should have for reviews or how to articles, etc.

-----BEGIN PGP SIGNED MESSAGE-----

Paul Anderson <anderson@palmnet.net> wrote in article
<33165855.4AEC@palmnet.net>...
> If a fellow is interested in building and selling an RF transmitting
> device, which operates off of ordinary house current, to hams (and
> potentially to others), what approvals are required -- type acceptance
> (FCC), safety (UL, etc.), others?

Well, this may not be exhaustive, because the regulatory side
has become an engineering specialty in its' own right ... but
as an RF design engineer, I have some contact with it ... if I
omit anything, I appologize in advance ...

For devices marketed for operation under non-ham rules:

1st as an "intentional emitter" the radio will likely have to
either be type accepted for a particular radio service, or
qualitied under Part 15 as an intentional emitter ... the latter
limits power to specified, rather low levels, with the exception
of spread spectrum devices operated in the 900 Mhz, 2.4 GHz,
and 5 GHz "ISM" bands which meet the FCC's SS rules ..

The receiver and any digital parts will have to (at least) be
certified under Part 15 as an "unintentional emitter."

UL approval is for safety and other aspects. I honestly am
not sure if this is legally mandated, but with liability concerns
anyone who markets a device that plugs into the wall that is
not UL approved has rocks in his head.

For certain business/industrial environments, another entity
("Factory Mutual") certifies devices as "intrinsicly safe" (for
operation in environments with potentially explosive vapors,
etc. ... i.e., "it doesn't make sparks, etc.")

If it connects to the phone lines, approvals under other FCC
rules, like Part 68, will be required.

I hope this is of some help ... you can download a copy of
Part 15 from the FCC's web page, in the OET section ...
The others can probably be found on the web as well, but
I've got a department in my company that takes care of the
testing and approvals for me, so I tend not to know all of the
painfully gory details of the process, just what I need to know
(like limits on emissions, etc.) to be sure the designs will
pass ...

AFAIK, that's the way it is *supposed* to work. The mode is called
semi-break-in. VOX delay will determine Tx holdin after you stop sending.
Set that to whatever is comfortable for you. The 800 Hz shift shows you
the frequency you are actually transmitting on in CW mode. The reason for
the shift is that there's a built in 800 Hz offset for sidetone.

This is a correction to my previous request for a 0.1 ufd @ 1500 VDC capacitor.

The capacitor is not an electrolytic but a metalized polyester or polypropylene tubular capacitor. Simplified, I'll take whatever you have with the correct rating.

Thanks for reading.

In looking at the receiver statistics from the ARRL product reviews on the above rigs and others, I began to wonder what rig had the most useful receiver for dx hunting (by this I mean sensitivity, selectivity, blocking dynamic range, etc). My reading of those stats is that the FT 1000D (not the MP) is the best, followed by the TS 850. I was not concerned with the DSP options, dual receive capabilities, or any transmitter performance; just basic receiver performance. I was wondering if anyone else out there has made similar observations (or contrary ones), and what rig is indeed the BEST receiver for dxing (not contesting...just dxing). For example, blindfolded could you tell the difference between an FT 1000D and a TS 850 or the Icom? Also, the statistics may indicate one thing but the actual operating may be quite different. Any thoughts? 73 de John, K7JY.

I am VERY suprised. Mine works just fine...I do use a straight key
though...maybe a paddle or bug doesn't work as well.

I will say that with a straight key, it works just fine.

The GD swap was shut down a few years back. It moved around to a few different
locations, with varying degrees of success. It is now operating in the parking
lot of the DeVry Institute of Technology in Pomona, on the THIRD Saturday of
the month. It is growing very rapidly, and now almost rivals the TRW swap.

Does anyone know if Yaesu has plans to upgrade the Yaesu FT-900 or replace it with a new model? Is Yaesu going to put out a radio to compete directly with the Icom 706 and the Kenwood TS-50. When may we expect new models in this field? Thanks. 73, Cliff Smith, K6JN.

Suggest you contact KV5V, at:
BRAD REHM
20128 WESTLAKE PKY
GEORGETOWN TX 78628

His company makes exactly the critter you want for this problem. He successfully solved many similar problems for the folks I work for: Texas DOT.

Good luck and give me some feedback when you get results.

Rick
K5FNI

P.S. To get mail to me, drop all on my return address before the "H". I don't like spam. <grin>

5690. Re: Ham-Equip Digest V97 #247

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-01 00:00:00 UTC
From: rwexelba@suffolk.lib.ny.US
Message-ID: <Pine.SOL.3.95.970301142639.9216A-100000@bookworm>
Source record: 181568

I was reading the mail about buying ham rigs directly from
Japanese stores.
I was in Japan in 1954 (on R & R from Korea) and I visited with
JARL members.
The Japanese hams took out a dog-eared copy of the ARRL Handbook
and thumbed to the rear of the book. There used to be advertising on the
back pages for Hallicrafters, Collins, Hammerlund, National, etc. The
Japanese hams wanted to buy receivers that were made in the USA. They
pointed out a line on the bottom of the National Radio (of Malden, Mass.)
ad. It said - "Prices slightly higher west of the Rockies."
Today I guess the reverse may be true for Yaesu, Kenwood, and
Icom.
73, Bob W2ILP

5691. FS CW STATION IDENTIFIER

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-01 00:00:00 UTC
From: ka2qep@webspan.net
Message-ID: <5fa2gr$n2v@news.webspan.net>
Source record: 181569

** FoxGap CW Station Identifier **

This unit is great for repeater identification, when your machine is up and running, or when you are down for repair and want to maintain a presence on your frequency. Also it is perfect for beacon use, just add a transmitter. For beacon use it will control your PTT on your FM rig, or key your output in sideband mode.

Features:
* Adjustable CW speed, 5 to 60 words per minute.
* Adjustable code tone, 200 to 1200 Hz.
* 55 character message buffer, plus.
* 55 character alternate message buffer.
* Repeat message time, 1 minute to 24 hours.
* Programmable from your IBM computer.
* Windows 3.1 or Win 95 compatible.
* Adjustable audio output.
* PTT output and Key (or beacon) output.
* Programming cable supplied.
* Small size, 3"L x 1.25"W x .75"H
* Standard 12 volt operation.
* Under 50ma. current consumption.

Programming requirements: IBM or compatible computer with a mouse and one 3.5" HD floppy drive, running Windows 3.1, Win 95, or higher. And a second COMM. port (2,3, or 4).

The FoxGap CW Station Identifier lists for $69.95 For a limited time the intro offer is $50.00. We can ship UPS COD cash only, MO, or certified check. For further information contact Jim at 610-588-0282 Fax 610-588-0282. Or email n2gkw@epix.net

5692. Kenwood TS-940 IF-10B Interface info needed.

That's a terrible analogy, Mustang. It's more like every article that comes across one's newsreader *does* end up in one's grocery cart, and we have to pick it and toss it out. It's simple to say "Just hit the N key" but consider the costs involved in transmission and storage of the garbage. It's better to just use restraint.

Why did this topic appear in r.r.a.boatanchors? - haven't seen any insults in here at all.

Jeff KH2PZ

P.S. Still looking for the 60s edition of the ARRL "How To Become A Radio Amateur." Also looking for a Heath HG-10B VFO for my HW-16.

5703. RE;IC-2350H - XBand Rpt-How?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-01 00:00:00 UTC
From: SEREIKAS@worldnet.att.net
Message-ID: <5facv2$o55@mtinsc03.worldnet.att.net>
Source record: 181581

Can anyone tell me how to put the ICOM IC-2350H into Xband Repaeter mode? I can't find it in the manual. Help would be appreciated.
Thanks,
George

Matt (chaka@bigfoot.com) wrote:
: Enough already! You have one now. Look at Rec.radio.commercial-lmr.
: In Netscape just select New Newsgroups.

Hmmm. Not on my news server.
Anyone else find it?

rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.antenna,rec.radio.scanner

For Sale...
I have 2 Heathkit ID-5001 computerized weather stations
for sale.

The first unit is still in kit form. The second unit is built.

This station is capable of measuring wind speed, direction, temperature,
with optional
indoor/outdoor humidity sensors, RS-232, and rain guage.

The built unit has no sensors, and the kit is missing a couple minor
parts that can be obtained at any electronic store.. Either combine the
2 units to have one working, which means you have spare parts or
purchase the missing sensors, and have 2 working units..

The reason for selling is MOVING...need the bucks, otherwise they
would never leave the shack!

No reasonable offer refused...

One of the things you can do with dual cable (75 ohm video) is use it as open
wire line. Simple feed the two center conductors and do nothing with the
shields of either cable. Advantage is you can have open wire line capability
without worry about it laying on the grond or touching some object. A friend
of mine uses it to feed his 40m yagi with a KW and it works fine.

5708. Kenwood TS-820 help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-01 00:00:00 UTC
From: Greg Hudziak <zgreg@mail.execpc.com>
Message-ID: <3318FD76.3282@mail.execpc.com>
Source record: 181586

I just received a kenwood ts-820 that has some problems. The 28.0 to 28.5 10 meter band has been converted to 11 meter CB use. I was wondering if someone had changed the crystal on the PLL board or if there had been a mod done on the radio.(The crystals aren't very easy to get at.) I also noticed that the frequency readout changes between transmit and receive on 10 meters when in the tune position. When the mode switch is in CW or SSB, the T/R frequency does not seem to change. Is this normal?????????? TNX for any help in advance DE N9OEH Greg pls send replies to this newsgroup or my e-mail zgreg@execpc.com

5709. (Help) TVI PROBLEM

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-01 00:00:00 UTC
From: Michael Ryan <WO4J@worldnet.att.net>
Message-ID: <3318F43F.4328@worldnet.att.net>
Source record: 181587

Does anyone have a 100% fix on TVI interference.
I've never had it before until now.I've tried the Johnson and the Drake
low pass filter and there is no difference with or without it.
There's no problem on the cable or DSS recption just when I go to over
the air antenna is when it shows up .I've run SB-221 and a Ten Tec
amp before with no trouble at all.Now I have a little mobile solid state
hf 500 watt amp that I would like to use if I could in the house.
Are there any good filters out there ? What needs to be done.
Thanks
Mike

5710. IC756 vs TenTec Omni VI+

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-01 00:00:00 UTC
From: Charlie Hicks <chicks@ix.netcom.com>
Message-ID: <3318F308.752F@ix.netcom.com>
Source record: 181588

I am considering purchasing (investing in?!) a new HF rig and have been wrestling with the features/bells/whistles of the new IC756 and the solid signal, no frills TenTec Omni VI Plus.

Both are in the same price range. I would prefer some features such as the general coverage receiver that the TenTec doesn't have. But I have also heard mixed reviews about the IC756 having phase noise, etc.

Can anyone objectively compare these two rigs and their respective qualities? I would expect the IC756 to have good audio, filtering, etc. given the price range but want to be sure. If you have either and have other rigs to compare them to I'd like to hear that as well.

Thanks + 73's

Charlie

> help me???
>

The key to getting the radio to enter the "internal system alignment"
mode
seems to be having VFO A set to a frequency in the 144-148 band, and VFO
B
set to a frequency in the 430-450 band. It refuses to enter this mode
if
you have other frequencies in place, or even if you have VFO A set to a
70cm frequency and VFO B set to a 2M frequency. Weird, but true. There
are 9 different settings for the VHF mode, and the same 9 setting
options
for the UHF mode. With your VFO's set as mentioned, if you tune to VFO
A
before turning off the radio and then entering the alignment mode, you
get to set the VHF values. Then tune to VFO B, turn off the radio,
power
it back up with the magic 3 buttons pressed, and set the UHF values.

Be V E R Y careful with the settings. Some of them do NOT work the
way
you might imagine, and I managed to screw up my radio for awhile because
of it. For example, if you select the S1LV (S1 level) or S9LV (S9
level)
options, you can twiddle the knob all you want, and you CAN'T change the
numeric value that the radio is displaying. Consequently, since I had
VFO A tuned to 144 MHz and there was no signal present, I managed to set
my S9 level equal to ambient RF noise level. Thereafter, every 2M
signal
(and many non-signals) registered S9 on the LCD bargraph. After much
frustration, I determined that the way you set those two items is to
tune

in a signal of the strength that you want to register as S1 or S9 respec-
tively, and THEN enter this mode. Of course, that requires that you find
the signal and tune it in while the radio is in normal operation mode,
THEN turn it off, then hold down the PTT, lamp, and knob, while turning it
back on. And hope that while you fussed with all that, the signal you want
to use as your S1 or S9 reference level is still around at the same strength
and same frequency. (I presume that the PROPER way to do this is with
test gear that allows you to generate the signal yourself, but I had to
improvise.) Fortunately, my S meter is working reasonably now, but I'm
pretty sure I still have the squelch settings a bit screwed up on the 2M
side. Sadly, even a "master CPU reset" doesn't restore those settings to
factory presets, or any other reasonable values...

After much hunting around, I finally found a reasonably-priced (about $100)
VHF/UHF SWR and power meter that has a 5-watt full-scale range. It is an
NCG-3000. I discovered that even with the FNB41 battery pack, or with the
13.8V automoble power cord, my FT-50r was only putting out 3.5-4.5 watts
on the high power setting, and the other power levels were also on the
skimpy side. I tweaked all 8 levels (L1, L2, L3, and HI for VHF, and
the same 4 for UHF). The "bad" news is that even when set to the maximum
value (255 arbitrary units), I still can't quite hit 5 watts on UHF,
only about 4.5 watts. On VHF, the max setting puts out between 4.5 and
6 watts depending on the exact frequency within the 144-148 band you're
on. I have noticed that now that I have the HI power setting cranked up
to (or almost to) the rated 5 watt value, the radio gets noticeably warm
during long conversations. I hope that's not a bad sign. (No, it's not
heating up because of a large amount of reflected power from a poorly
matched antenna. The antenna in my car has an SWR of 1.2:1 at the 2M
frequencies I use the most, and at its worst, an SWR of 1.4:1 at around
440 MHz. Most of the power is going in the correct direction!)

Hi, I have an Icom 281H for sale for $300 shipped (lower 48)

has 2m transceive with 440 receive

has expanded transmit and receive including AM aircraft.

power out 5, 10, 50 watts

crossband fullduplex from 440 to 2m.

plug-n-play for packet (1200b and 9600b)

in excellent shape, in original box with all accessories as
supplied by icom.

Also have (included) the Factory service manual. ($30 value)

I used this for my packet station, rarely for phone. and only
used here in the house (non-smoker :-)

any other question?, feel free to ask at:

k6ls@amsat.org

5713. 2M, How much power is needed ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-01 00:00:00 UTC
From: Bob Diaz <bdiaz@pacbell.net>
Message-ID: <3319153B.22F7@pacbell.net>
Source record: 181591

For a 2M HT, how much power is needed?

I know that this is the kind of questions like, "How high is up?", and I know that the answer is going to be something like, "Well, it all depends . . ."

I'm new to all of this and have no idea how much range one can expect from 1 watt or 5 watts. (I live in the LA area, so I'd want enough range to reach the repeaters in the area.) Can it be done with just 1 watt or does one need more power?

I hope others in the newsgroup don't mind this sort of question from a newcomer.

Sincerely,

Bob Diaz

>Hello everybody (well, those who reads this anyway ;-))

>Looking for a new Yaesu dual band radio. Looking at FT-50 and FT-51.

Scott, here is my opinion, for what it is worth. I own both the FT-50 and FT-51. I prefer the FT-51 for its ability to receive two channels (V+V, V+U, U+U) at the same time. The backlit keypad is nice, too. Mostly I prefer the better alphanumeric display on the FT-51. Each channel gets up to 8 characters which are displayed along with, not instead of, the frequency. In contrast, the FT-50 gives 4 characters (not enough usually) which replace the frequency display. Physically, both units are very nice, with the FT-50 being slightly shorter and thicker than the FT-51. The FT-50 is also nice for the wide band receive, although it suffers more in high RF areas. I can use the FT-51 more effectively in downtown Atlanta. Bottom line: If I could only keep one, it would be the FT-51, but I really like the FT-50 and would not consider it a bad choice. One other advantage - about $150 cheaper for the FT-50, or say $100 cheaper if you add the deluxe keypad. That's probably a fairer comparision since the some of the deluxe features are standard on the FT-51 (such as CTCSS decode).

regards, Don (KE4KYO)

5723. Heard the TS-570D's Full Breakin Sucks?

Newsgroup: rec.radio.amateur.equipment

There's a logical explanation for this symptom ... your radio draws
somewhere in the area of two Amps when transmitting at full (five
Watt) power output ... two Amps times the 9.6 Volts of the source
equals 19.2 Watts from the battery ... less the five Watts out the
antenna equals 14 Watts in the form of heat ... hold your hand on a 15
Watt light bulb (which puts out a lot of its energy in the form of
light) and see how warm it gets!

Synchronous det. opens-up the higher frequency response a little on a
strong
AM signals. Dsp noise reduction only seems to help on cw. Using dsp on
SSB
signals makes them sound too unatural for me. I think the 1000mp is a
excellent radio, but I wish Yaesu would make some changes to its Audio
circuits and or i.f. circuits to open up its clarity and sound.

The old Ontario General Dynamics swap moved for a while
to Rio Hondo College near Whittier, then to
DeVry Tech Institute parking lot in Pomona, where it is
still being held -- although I believe it is the 3rd Saturday of each
month (someone please correct me if I have that wrong).

DeVry is at the southeast of where the 57 and 10 freeways intersect.
Going east on the I-10, just past the I-57, get off at Fairplex and go
south and follow the signs to DeVry.

The swap is sponsored by the Calif. Microwave Relay Assn (CMRA).

```
How are the tubes?
You sure everything is OK?
I need a HF rig to get on, not much money.
I just don't want to get taken and have a broken radio and no money.
Please let me know

Hello all...

I have a Butternut HF6VX Multiband Vertical Dipole for sale. Here are

the specs for the antenna:

Shipping weight: 12 lbs/5.4 kg

Height: 26 ft/7.8 m

Feedpoint impedance: Nominal 50 ohms with included

matching line.

SWR at Resonance: 1.5 or less--all bands.

SWR bandwidth for 2:1 or less: Entire 10, 15, 20, & 30 meter

bands; 250-300 kHz on 40 meters,

30-100 kHz on 75/80 meters.

Power Rating: 1500 watss PEP 80-10, 400 watts

PEP on 30 meters.

Wind loading area: 1.5 sq ft/0.15 sq m.

I am only asking $135.00 for it, and that includes shipping via UPS

Ground. Money Orders will ONLY BE ACCEPTED. No C.O.D. or personal

checks allowed. When I accept the money order, please include your

home telephone number so I can call and give you a UPS Shipping Code

so you can track it via UPS if so desired. Thanks for all who read this

in advance....

Just got a ts440s and have been told the ssb audio is low. FM and AM
appear to supply sufficent drive, whils the SSB clarity sounds like an
early modle HT with the same mikes as in the FM/AM tests?
I can't seem to locate the internal ADJUStMENTS any help would be really
appreicated.

Hi Tony,
you are correct....there IS no TYPE ACCEPTANCE for amateur gear other
than Part 15 for the rcvrs....IF MR Gasta could read along, I point him
and others (Phil, YOU need to read this also) to Page 12-6 of the ARRL
"FCC RULE BOOK" 10th edition 1st printing (copyrighted ARRL 1995)...
And I QUOTE:

"Like other radio services, amateur equipment must meet certain
standards.
Unlike other services, however, most amateur equipment does not have to
be TYPE ACCEPTED. Type acceptance is an equipment authorization granted
by the FCC, based on equipment-measurement data submitted by the
applicant...."

and on pages 12-7 & 8:

"There is one type of amateur equipment that does require type
acceptance. In 1978, the FCC banned the manufacture and marketing of any
external radio-frequency power amplifier or amplifier kit that is capable
of operating on any frequency below 144 Mhz UNLESS the FCC has issed a
grant of type acceptance for that model amplifier."

John,

While you are at it, how about adding the IC-275 @ H10, and IC-475 @ H14? The last is a 70 cm rig, which would probably mean changing the allowable frequency range.

73,

Alan

I haven't seen any lab test specs published on the 756 yet, and I hope
QST will will redo the OMNI tests.

Ten-Tec has a 30 day "try it and if you don't like it w'll give you ALL
your money back" policy. I can't think of any better way to check one
out -- since subjective evaluations (including mine) aren't worth the
electronic bits they're transmitted on....

Jeff,

My statements were that modifying amateur radio equipment was and is poor engineering practice. That means that I am against it. The legal issue is not withstanding. If experimentation is the reason; then it is a good way to learn. BUT IT DOES NOT MEAN IT IS ACCEPTABLE FOR THAT SERVICE!

As a "radio tweaker", which Dana has called me... I know better to take a ham rig and substitute it for PROPER EQUIPMENT.

Most Japanese retailers charge higher prices than are available in the US.
Instructions are in Japanese.
Service manuals are in Japanese, I hope you plan on self-service some US service organisations wont service units from Japan, and hope you are able to read Japanese. Warranty is not good in USA
Shipping is very expensive from Japan, and from England.
Price in England is about 50% higher than in the USA. Again Warranty is not good in the USA.

Sorry NO FREE RIDE

Hi All,
We would like to establish a packet-internet gateway at Yale University.
Your advice on any of the following subjects would be greatly appreciated.
digipeater manufacturers
TCP/IP on the air versus X.25-to-TCP/IP hosts
small dual channel radios and TNCs for laptops
software for any of this

Assume I know nothing, because I probably don't. I'd love to hear any
advice you might have. Thanks.

>
> I have a new Volvo 850 wagon that I would like to add a 2 meter rig (permanent mount). Does anyone
> have recommendations on a good performing and small unit??

I had to mount my radio equipment behind the center console in my Chevrolet Corsica since there was no way anything would make it under the dash. Advantage is you don't take away from the vehicle's asthetics (as far as the front passengers are concerned) -- most front seat passengers never see the radios until they hear them. Only drawback is that you have to reach behind you to fiddle with the knobs and buttons either by feel, or when the vehicle is stopped.

Other solutions are using an HT and an external antenna... but it's a clumsy set-up best suited for rental cars.

I have pulled an old TR 7730 out of a box I didn't expect to find anything in, and, it actually worked after who knows how long..

There appears to be some sort of tone board installed in the back of the unit, it has a white wire, a black to ground, and a red that goes to the pushbutton for TONE. It also has a 5 segment dip switch (on/off) array. I have NO docs on the radio, or the tone board. I guess it has 'something to do with tone encoding..'
Anybody have ANY info on this radio and or mod? It also has a 3pin outlet on the back for a backup battery supply. I have no idea what voltage it is looking for, but, if I disconnect the power, I lose all (5) memories...

Thanks in advance!

RObert McAdams (ka5ppx)

>>...I live in the LA area...1 watt OK???...

Heck, Bob - I live in Mira Loma (Pomona Valley), and half a watt reaches scores of repeaters for me. (I can "hit" Santiago Peak...San Dimas... San Bernardino mountains...)

An HT will do it for you - with its "normal" 2 watts - in L.A.. But think of an efficient ANTENNA moreso than a couple more watts. When mobile, a good external antenna probably makes up the same difference as switching from 1 watt to 5 (or more).

At home, spend fifteen minutes and make yourself a J-Pole...or get something outside and high!

>>I hope others in the newsgroup don't mind this sort of question from >>a newcomer.

ABSOLUTELY NOT, Bob!!! Let us know the results of your experimenting!

FOR SALE stuff. All works except as noted. Divorce and pending relocation to another town force me to choose what to take and what to sell.

Prices do not include shipping.

Trades will be considered for fairly compact mobiles (2m units MUST work on CAP, MUST have PL installed)

(1) PK-232 w/manual, software -- $175 obo

(1) MFJ-1278 Multimode Controller (similar to PK-232 but also does video) w/manual, software -- $200 obo

(1) Tempo One HF rig, low/no power out last time I tried it, with military handset, manual (if I can find it), 110v PS -- $225 obo

(1) Icom IC-2GXET HT, good condition but sqeulch erratic -- $195 obo

(1) Ricoh Fax 35 -- bells, whistles, paper sometimes jams. $40 obo

(1) Canon A1 Hi-8 camcorder, in padded case with AC adapter/charger but no battery (they cost $30), this looks like big 35mm SLR, has S-video port -- $450 obo

(1) Zenith 27" TV/monitor with SEq Surround stereo, w/manual MUST come to Sedona AZ to pick up, $300 obo

(1) Sony VO-2600 3/4" production/editing video deck, with "stupid" edit controller keypad. Good condition. $300 obo

(2) Sony VO-4800 portable U-Matic-S decks. Some case dings, shows ENG use. $250 each obo or $400 for both.

(1) Panasonic WV-6000 camera. No viewfinder, was only used in studio with monitor. In original hard case. $200 obo

(1) JVC Video Editing Processor, Model JX-SV55, <8 hours use, excellent condition with manual, $250 obo

(1) JVC Character Generator, Model JX-T66, companion to JX-SV55 with same low use, $100 obo or BOTH JX-SV55 and JX-T66 for $325

(1) RCA VHS Stereo (consumer) VCR, Model VR680HF, lost remote and the little cover for the manual play buttons. $90 obo.

>
Charlie ...

I am an ICOM fan ... been using them for years, HOWEVER, between
the 756 and the OMNI VI, I would go with the OMNI. The OMNI has been
competing with the top of the heap Kenwood 940/950's and the Icom 775.
The receiver included in the OMNI is one of the best that can be had,
from anyone, at any price. Ten-Tec, in order to keep the price
competitive with Japanese mass produced units, has left off things which
would increase the cost, dramatically, while be of limited use in a
strict "ham radio" environment. One of these features is the general
converage receiver and the other is the internal power supply. The lower
price also is necessary to be competitive in a market which feels that
only the Japanese can build good communications transceivers. Because of
this the "upstart" US company must keep its price below market average
for the performance given in the unit to attract prospects.

What is built into the unit is a receiver that is one of the best
on the market and a transmitter which can get the job done. If you want a
"no nonsense" get it done unit the OMNI will take your money, hands down.
If you like to use your rig for more than strictly communications and
like all the eggs in one box, you will go with the 756. I really don't
think you would be dissapointed with whatever unit you purchased.

You can sent to Ten-Tec for an information packet. Contained
within are several evaluations done by amateur radio magazines. The most
revealing, in my opinion, it the one by the British collumist.

You're just soooo stubborn, William. You're saying it is *always*
poor technical practice to use a modified amateur radio in non-amateur
service. You're just incapable of accepting evidence to the contrary,
instead launching into personal attacks. There are numerous examples
of commercial gear made by Japanese manufacturers that share RF decks
with amateur radios. The *same* RF deck. Technically, then, your
argument has a hole in it.

Legally, a non-type accepted radio may not be used in a service
requiring type acceptance. Period.

None of your insults and patronizing explanations of RF filters
will change the truth.

>As a "radio tweaker", which Dana has called me... I know better to take a
>ham rig and substitute it for PROPER EQUIPMENT.

Well, that's just funny. As an "incompetent engineer", as Wetzel has
called me, I know that commercial gear is often superior to
amateur gear - which is why I've been using Motorolas and GEs in
amateur service for a number of years.

Based on the private email I've received, I believe I can safely ignore
your personal attacks. I've been assured that your attacks have hurt
your credibility rather than mine.

I like your comments. Ten Tec is the only manufactuer of HF radios that has enough faith in its product to give you 30 days evaluation. I know they sell the few returned radios as used for a discount. They don't repackage and claim "brand new".
I have tried a Tentec Paragon I and thought it was very siplistic to use. It appeared to be well constructed also. Just the fact that you deal dirrect with TEN TEC makes me reevaluate Ten tec as a viable alternative to purchasing from dishonest Dealers.

Thanks for the honest comments. I will still have my friend going to
Tokyo in 3 weeks confirm your comments. I will post the prices in Yen of
several popular Ham radios in YEN and show the conversion to USA
Dollars. My friend speaks Japanese so he will be able to deal with the
stores there. Also I hae heard that many of these stores have
salespeople who speak English as well. The call to Japan is not cheap.
Keep your Eyes open for the results of my price comparison.

Steve:

How do you make your judgement as to what the value of the Ten-Tec should be? I beleive Charlie Hicks was asking about performance, not bells, whistles, and add-ons (such as a tuner). Have you ever had an Omni VI Plus side by side with an IC-756. I think not, since the Ten-Tec is just now hitting the market. Without making that comparison, and honestly comparing the radio performance, you can't render an objective opinion.

Honestly, neither can I at this point. I hope to be able to in the near future, as I am in the market for one of these rigs. At this point, I am leaning strongly towards the Ten-Tec, but my mind is still open.

5778. TM-741 as a crossband repeater?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-02 00:00:00 UTC
From: Gronlund Pentti <benjamin@ele.tut.fi>
Message-ID: <ycr67zac7ku.fsf@ele.tut.fi>
Source record: 181477

I am using a TM-741 for 6m, 70cm and 23 cm mobile. Now I happened to buy a FT-911 and it came to my mind to use the '741 as a cross-band repeater to reach our 6m and 70cm repeaters when I'm in the vicinity of my car with the handheld.

However, I didn't find anything in the modification file servers. Is there an undocumented feature to make the '741 a crossband repeater or do I have to build a black box in the mic line?

I have the service manual so even simple reference to component numbers would be of much help.

FAR Circuits has a circuit board for an up converter that extends the 9600's range to 0.1 MHz-60 MHz. I custom built a board that plugs into one of the expansion slots inside the RX. The back panel also has a knockout for a 2nd SO239 connector that makes the mod a no-holes job. I do not have art work for my custom plug-in converter.
Outside of lacking a CW filter this makes the RX into a fine HF RX.

From: charles1@netcom.com
Message-ID: <charles1E6FuFx.A6z@netcom.com>
Source record: 181480

Some tout that tubes are best, but I fail to see their advantage.

Tubes have a limited life time.
Tubes require tuning the rig, then tuning the tuner, a real pain.
Tubes eat alot of power just sitting idle.

Transistors live much longer.
Transistors don't require tuning rig, 50 ohms is constant.
Transistors run cold till transmit key applied.

Chuck those old tube rigs, go for solid state!

I bought the latest issue at a bookstore / magazine / newspaper emporium
last week. I think it was dated March 1997.

If you go for the TEN TEC please advise the NEWSGROUP as to your
comments. I guess I could buy the TEN TEC for the 30 DAY evaluation and
only pay return shipping both ways if I didn't like it. Try that with
any other HAM STORE.

> HW-2036, Icom 22A/U or Yeasu Memorizer.

YUK!!! DO NOT use amateur gear for rptr svc....ANY place!!!
Use GE or MOT (I prefer GEs)....RPTRs are NOT normal ham stations...even
the remote rcvr sites...if your voter is to work and audio is to be
transparent, STICK will ALL the same gear...

> Is anyone currently in a situation
> like this and got off cheap using amateur quality gear instead of going
> Motorola?

You use cheap, you'll get cheap results! Stick with REAL rptr gear!

> Please reply to me directly via e-mail at <qlf@msg.ti.com>
>
> Brad, WB0CGH

I had the same problem....two things...IF the offset xtal in the LO is
not functioning due to a dirty switch, this will cause it...wiggling the
simplex / -/+ 600 offset switch will cause this...and verify it...clean
or replace the switch inside...
ALSO the 8V regulator.....the solder joints have a habit of coming loose
after time...the regulator is mounted to the case at the right side of
the top of the radio...remove the cover and you'll see it next to the
relay....if you can, remove the PCB and resolder the connections (you'll
have to remove the 8V reg from the chassis to do it) and then reinstall..
my 227R still works after 20years...(now if I could get the damn
display/up/dwon counters to work right! the rig always wants to go UP!
most of the time! even when tuning DOWN in freq)

I disagree. I have a Viking 352D CB converted to 10m and I've had a lot of fun using it pedestrian mobile. The received audio is also better than on my TS120V - I suspect that the synthesiser in the 120 generates noise that mars reception of weak signals. Converted CBs have other advantages such as portability and low power consumption. I would recommend them highly.

Bob:
I had the Morrow twins about 40 years ago. If you can
get any noise at all out of the receiver it can probably be fixed
by checking(if you can find a tube checker) the tubes. These are
so old that the tube bill might be more than you want to spend
if you want to restore the set. The same goes for the transmitter.
As far to the hot transformer, the electrolyitics might be very
leaky by now and will have to be replaced. You might check
out Sam's Photofacts at a TV parts distributor, they had diagrams
for a lot of the older Ham gear.

LETS BUY DIRECT AND ELIMINATE THE MIDDLEMAN. SAVE big $$$ by purchasing
direct from Japan. Here are two Dealers who I have heard great things
about. I also heard a few salespeople there speak English!

MY WAY RADIO
+81 33253-2024
Yamamoto Electronics
14-2 Sotokanda 2Chome
Chiyoda-ku Tokyo 101
Japan

T-Zone
+81 3 3257-2659
Toymura Electronics Co.
12-2 Sotokanda 2Chome
Chiyoda-Ku Tokyo 101
Japan

Lets elimiate the Middlemen (the Distributers and Dealers)
There return policies are nonexistant anyways so why do they deserve to

profit of our HARD EARNED MONEY. They can get other Jobs once we put them out of Business!

5826. FS RS HTX-212 TWO METER MOBILE

Hi - and thanks for reading. I am posting this for an old-timer/neighbor who wants to start selling off some of his gear. He is the original owner of the 350XL and remembers purchasing it in 1974. Included is the 350PS power supply/speaker. The gear is in excellent condition both electrically and cosmetically. Original manual and all repair records. He is asking $400 plus shipping. You may call him directly (Max, W6LAS) at (415) 564-4578 or leave a message for me and I will get in touch with him for you. 73, Pat (W7YCN)

One thing the Omni 6's are not out yet but understand its got a token amount of changes over the Omni 6. I have seen dealers advertise the 756 for $2249 and understand the Omni 6 plus will cost $2585 facory direct, That's $336 more.

John, I have used all the mentioned radio's and would like to add one other. I perfer the Icom 781, 775 and the 1000D. To date these are my three favorite. I picked up an 850 just because of what you noticed in QST and was disappointed. I dumped it quickly. The receiver test I do with signal generator and db meter have always given
the Icom typically better marks. Most hams buy by price, looks, what the crowd buys and keep telling themselves their $1000 rig is just as good as the $3000 rig.
If all you want to do is get on the same bands I quess they are just as good.

> VK3YSF
Cable TV coax is 75 ohm, at least here in the USA. It actually can be used to feed dipoles, but I like it for making dipoles and loops-cut it to the usual length for your band, minus about 10% for the lower velocity factor, break the braid in the middle for the connection to the feed line, and short the center conductor to the braid at the ends. For loop antennas, use a single piece cut to length, break the braid at one corner for connecting the feed line, and short the center conductor together at the same spot. It also is very useful for making impedance matching stubbs, I use the formula 246/f in Mhz, x .72 for foam core or .66 for solid core, which will match that coaxial loop to 50 ohm feed line. I use a coaxial loop with the 75 ohm matching stub on 20 meters, SWR less than 1.8 accross the band, and less than 1.5 on 10 meters, and have had great success with it. If you can get it cheap, don't be afraid to pick some up and experiment-just make certain that you have enough to complete your project with a single piece, as it does not tolerate being spliced.

Thanks for your time in reading this.
Cesar
PY1BY

I just received my TS 870 back from the repair facility in California.
They changed the EPROMS. They told me that the EPROMS were changed
about 6 months after the radio's came out due to not returning to the
Receive mode. Just a small Glitch(Grem Lins I The Computer Harnes).
Hi Hi. My radio is S/N 101 or 1995 so it haden't been changed. The
cost was $29.53 times 3 plus labor.

I would go for the Icom 756 vs the Ten Tec 6 + . The Icom has a built in
tuner, DSP plus 6 meters, SCOPE, General coverage (shortwave).
The Ten TEC is not as good a value. I think the Ten Tec should cost
about $1800 for the Features it gives you.

Wait till this Summer! the Ft-900at is really a Yaesu Ft-890 with a
remote faceplate. This radio is really 8 or 9 years old technology.
The radio is long overdue for an overhall. Expect the new radio by
July 1997. I was told this by a Yaesu Sales Rep at a Ham Feast.

From: w8pu@aol.com
Message-ID: <19970303071500.CAA21066@ladder02.news.aol.com>
Source record: 181325

Hi Joe,
I have collected Drake gear for about 5 years now and have never had the problem you discribe. However check to see if the long spring that is connected across the top of the PTO has come off. The spring is connected from the top of an upright piece of metal that follows the threaded shaft to the top right edge of the shield that covers the pc board. I have taken this spring off to do maintenance on the PTO's and have notice that the tuning shaft can jam when turned, binds up.

Hope this helps....73 Gary

Dear friends

I am wondering if any of the JST 245 ownwers has tried to increase
the output power of the JST 245. Even though it won't make any difference
in signal strength but it's nice to know.

Has any of you compare the JRC rig with other top models like FT1000MP.,
IC775, TS950SDX, FT1000D .Please give me a quick review with your comparisons
results.

Thank you in advance

Nobody has a 100% fix for TVI! Check your TV antenna and connections. A corroded connection could account for a sudden onset of TVI.

>-- Dan
> KF6IZO
>email: asa@starlinknet.net

Dan:

Extended Rx for the Icom W32A:

Press the BAND and SQUELCH at the same time and press the
POWER ON button and hold all three for about 5 seconds. Display now
shows all segments lit, this is OK. Turn rig off, then back on and now
you have Rx from about 110-999 Mhz.

The "forbidden" band (869-894) is locked out,****BUT**** the images are
received just fine, starting at about 961 Mhz up to 986 Mhz. IMHO,the
out-of-band receive sensitivity is the best I've seen in an HT.

Good luck and 73,

Al W2JUV

I have been working with and putting repeaters on the air for some time now. IN MY OPINION the best controllers (and the most reliable) are the S-COM controllers. The 5k (I have used personally) is a very powererful controller for the price. I have several friends that have upgraded to the 7k (linking ability, interconnect, voice, etc etc) and are very very pleased with them.

...
>1. Why cant I get my radio to go back into "BAND xxxxxx" anymore, it did
>it one time during freeband mod?

I played with mine a bit and I think you have to reset the CPU to get
back to that menu of settings. If I remember correctly, it's the
power on with lamp & knob pressed, then press F/W. Actually, I think
you need to power it on twice in a row like this to get it to reset.
I think the first time is turning on the wide receive (if it was off).

I tried a couple of the other band settings, but I didn't bother to
try to figure out exactly what they covered. There appear to be settings
for the bottom and top end of the signal strength meter as well as the
settings for the transmit power levels. I didn't muck around with them
yet, but I don't think you can do much harm here as long as you write
down the original setting and don't go past the high power setting
(or at least not too far past it).

>Is there a power on button sequence that will reset the microprocessor
>without clearing memories?

I don't think so.

>What are all the different power-on-button-sequences and what do each of
>them do?

There's the knob & lamp that I think does extended Rx and/or CPU reset.
MR/skip goes into the game mode. Lamp, PTT & knob goes into the big
factory settings menu. Lamp goes into the display test mode. Lamp
and PTT goes into the memory-only/commercial radio mode.

>Is there a mod for receive in the 25-75 MHz range ?
>Is there a mod for TX (or RX) in the 220+ MHz band ?
>Is there a mod for TX in the 800/900 MHz bands ?

I don't think so and I would be surprised to see one that didn't
involve massive changes, especially for 800-900 transmit.

>What happens when you turn off the CPU clock shift function ?
>What would this be used for, scanning via some sort of computer like
>computer aided scanning ?

I don't know. If I'm not mistaken, I changed mine and couldn't notice
any functional difference in the minute or so that I played with it.

Hi Bill
Manuals for that gear are available from numerous sources. I deal mostly with "The Manual Man" P.A. Markavage in Sayreville, NJ. He's always supplied a very nice product ! I don't have his address or phone number with me, but he advertises in most of the amateur publications !
I make it a point to buy manuals for all the gear I pick up, even if it comes with an original ! I have originals for many items, but don't want to bend them while I'm servicing gear or copying them !
Good luck and best wishes !

To ENABLE cross-band repeat:

While pressing and holding the VHF and UHF tuning dials, press the SET button for about 1.5 seconds. The radio will enter LOCK mode, and the "L"s will blink indicating CBR mode.

To disable, just press and hold the SET button. Viola!

The 2350 is a fantastic rig. Mine runs in CBR mode all day and night, except when I'm in the vehicle.

I posted this question several weeks ago and never got an answer, so here goes again.

Is it possible to run two power supplies in parallel? Will they balance the load so that each one is supplying about half the load? I have an Astron RS-20M and was thinking about connecting another one in parallel to provide higher current capacity.

Regards, Jim

Jim ...

I do this with all of my gear (Icom plus a bunch of tube BA stuff).

I use the radio's normal mic input line, but put an attenuator between the line level audio output of my preamps/processing equipment and the mic inputs. Any impedance mismatching that occurs has no negative impact on the audio quality -- and the line level provides plenty of audio (Waaaay to much, without a pad).

You should be able to conjur up an appropriate pad to do the job. I was fortunate in having a 0-60 db attenuator (in 2 dB steps) in the junk box, but you don't need anything quite that esoteric.

Grant/NQ5T

Jim

connect the line output of your audio board to the Mike input of the TS450. Adjust the output level of the audio board to be in range of the Mic input. Just set your meter to the ALC position with your mic gain control set to minimum then play with both the Mic Gain control on the TS450 and the audio output level of your audio board to give you the right drive level that does not go beyond the max ALC level shown on your radio. That should do it. The Kenwood phone patch just plugs into the MIC INPUT of the Radio.

Do you know of another way of getting the 10% discount? I already have the RS Credit Card so can't do that again. I do sometimes get 10% off coupons from Radio Shack but have not seen some for a while. Want to buy the Pro 60 and with the additional 10% would make if 57% off the regular price. Not a bad deal?

Does anyone have specs for the replacement for the Pro60? I think someone posted some a while back but can't find the info.

James
I have the same thing with the 1991 Chevy 1/2 ton PU. I out new plugwires, distrbutor cap, rotor button, plugs, shielded power lead for the DX70t, and a cap on the fuel pump and still have noise. I seem to get it when I do a heavy accelaration. More of stactic poping than anything. I am ready to trade the dang truck in for a horse, mag mount antenna, and a CB....

Hi Jim
Yes you can run 2 PS together as you describe.I run a 15amp and a 30amp in parellel to have enough current for my amp.If you set the supplies for the same voltage then you will have equal current deaw from each.If the voltage is unbalanced then you will have unequal loads but it will still work fine.

You got it . . . They won't respond. Several months ago, like around
Thanksgiving, i told them had both the TH-79A and the 733A and would
like to be a Beta Tester for their gear. They said sure, no problem,
your on the list. And that's it. I've tried for months to contact them
and no response. So, that's my experience with them ....

Source record: 181360

Has anyone ever tried building a new front-end board for the FRG9600.
There's a spare board slot inside the unit. If you ground a pin,
the readout works from 0-999MHz. Looks like with a 73 MHz. IF, the
output of the PLL control circuitry would make the display read
right. There are three control signals for 0-20, 20-40 and 40-60 MHz.
I wouldn't mind having 0-60 coverage.
miker

5903. Re: Best RCVR for dx hunting: FT 1000, Icom 775, or TS 850?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-03 00:00:00 UTC
From: Nate Dixon <nated@microsoft.com>
Message-ID: <01bc2818$25891c00$9ca8369d@nated-2.dns.microsoft.com>
Source record: 181361

Thought you may like to read the attached. It is from an owner of an FT1000D, Author on Low Band DXing and one of the organizers of VK0IR (Heard ISland DXpedition). VK0IR used the FT1000MP for their HF operations.

Nate
N7OS

_____

TWO WEEKS EXPERIENCE WITH THE NEW FT1000MP

I have had the opportunity to evaluate one of the FT1000MP rigs that are sponsored by YAESU to be taken along to the HEARD Island DX-pedition in November.

I have seen a few rumors about this new radio on Internet, but no real life reports, so this may be interesting to all of you.

The FT1000MP weighs only 15 kg (33 lbs) vs. (ask your back, it will remember) some 25.5 kg (51 lbs) for the FT1000MP. Great! It has a switching mode power-supply (no bulky heavy transformer), and the PA voltage is 13 Volts (vs. 28 V for the FT1000D). Hence the 100 Watt output power. But nowadays you can drive two 3CX800's pants off with even much less than 100 Watts, so I do not see the 100 Watt power limit as a disadvantage.

The FT1000MP looks very much like the FT1000D. The two large VFO knobs arein the same place, as well as the band keypad. In the FT1000MP you can nowindividually select the IF filters in each IF (8.125 MHz and 455 KHz), just like in the TS-850. Five selectivities are provided: 250 Hz, 500 Hz, 2.0 KHz, 2.4 KHz and 6.0 KHz.

The FT1000MP not only has (like the FT1000D) a separate receive-antenna input, it also has two different transmit antenna outputs, selectable from the front panel (maybe good for something, don't know what yet...).

The good old analog moving-coil S-meter is gone. It had to happen some day. But now the sub-receiver also has a LCD-bar S-meter. Both are peak-hold meters, where the hold time can be adjusted from 0 to 2000 mS. Nice feature.

The display panel looks a little crowded, but shows a lot. You can (to a certain extend) even program what you show on the panel! It even has an RTTY/Packet tuning indicator, but that's just a gadget.

Lets' talk about what makes a good radio: a good receiver. The FT1000MP has three different RF amps stages! One is designed for the low bands (160, 80 and 40), and is optimized for strong signal handling. The second is optimized for noise-figure (maximum sensitivity) and is used on 24 and 28 MHz. The third amplifier covers the remaining bands. This third amplifier can also be selected to cover all bands. With the big 40 meter yagi pointed at the Eastern European Megawatts on 40, I did notice some difference between the general purpose preamp and the low-band optimized pre-amp.

Even without IPO (which means switching off the pre-amp) or inserting attenuation, I could not detect any trace of intermod on 40 using the special preamp. With the general purpose preamp, I could hear a slight trace of crud.

A vast improvement over the FT1000D is that you no longer have to turn a knob (the RX MIX) to switch from main to sub receiver audio. A small push-button (AF REV) does the trick. Simple but efficient.

Then there is of course DSP. YAESU calls it EDSP (Enhanced DSP ...). It works on the last IF, on the detector stages and on the audio stages on receive, and also on the microphone preamp chain on transmit.

On transmit one can select from four fifferent pre-emphasis curves. The cheap sounding hand-held mike that comes with the FT1000MP (sounds basy, hollow etc.) is turned into a Heil like mike with the EDSP. On the air tests confirmed that no difference could be found between my Heil boomsetr mike and the hand-held with EDSP!

On receive, there are two concentric knobs that control de DSP function. One selector allows you to choose between 4 different noise reduction algorithms (optimized for either random noise, QRN, man made noise etc.), while the other knob selects 4 filter options: band-pass, high-pass, low-pass or band-reject. The FT1000MP DSP works at least as good as any of the external DSP filters I have so far used at my station, and is of course much more convenient to use, as it is controled by one of the microprocessors and automatically adjusts itself to the operating mode (CW, SSB, RTTY etc). The DSP of course also eliminates any number of carriers that may pop up in the pass band on SSB.

A very large number of operating parameters can be adjusted by the operator from the front panel by microprocessor control (similar to TS850). When doing so, the diplay panel shows the parameters in the frequency display windows, while adjustments are done by the two VFO knobs and the memory slector knob. Most of the parameters can be adjusted in real time. This for instance allows you to select the best audio pre-emphasis curve for your particular voice and microphone. You can also adjust the transmit-receive switching times to match you amplifier in QSK operation. Together with a good monitor scope this allows you to adjust the setup for fastest response without relay arcing. You can even shift the carrier position on the IF-filters to your taste! In total 81 parameters can be adjusted with
this method.

Despite all of this, the FT1000MP still is a radio, and not a computer. If feels very much like the FT1000D, and its operating convenience is identical or even better.

The FT1000MP has a full-fledged CW keyer built in (full weight control, automatic letter spacing, number insertion for contests, and 10 message buffers). However, the control of these buffers is done from a keypad which is NOT provided with the FT1000MP, and which is not even an option (yet ??).But it is is very easy to construct, and details are given in the manual.

One great improvement, is that the CW pitch is adjustable (in 50 Hz steps)from the front panel (from 300 to 1050 Hz). Changing the pitch automatically changes the relevant frequencies of the DSP filters etc. (everything is "gang-tuned"). The FT1000MP now also has selectable sideband on CW (nice feature!), which was first introduced on the TS850.

The FT1000MP is excellent on the digital modes. The EDSP filters work very well on RTTY. All usual tones and shifts can be selected through the menu selection method as described above. The FT1000MP also has FSK input.

The connectors and pin-outs on the back of the FT1000MP are 100% compatible with what is used on the FT1000D. The transceiver also supports the digital voice keyer DVS-2.

The FT1000MP has a built-in level-converter for the CAT interface. A 9-pin (DB9) connector is provided for direct connection to a serial port of the computer. However, the instruction set for the FT1000MP is NOT the same as for the FT1000D. This means that the FT1000MP does not work with the current software programs that work well for the FT1000D. YAESU USA (Chip Margelli) is aware of this, and I have been told is working on it.

When you open the FT1000MP, it is amazing how much less crowded the radio looks than the FT1000D. The big wiring harnesses that connect the PC boardsare gone. One small wiring harness is all what's left in the bottomcompartment. Many boards are however connected with flex-prints. The new FT1000MP looks like a well engineered piece of equipment. The diecast aluminum front panel has been replaced with a plastic cast front panel, whick is likely to be more scratch resistant than the painted panel from the FT1000D. The styling is very nice, and follows the latest trend of curved lines and shapes that we witness in the car industry!

Conclusion: the FT1000MP is every bit as good or better than the FT1000D. It has a very quiet receiver, and the ESDP makes it even quieter! It produces excellent audio on SSB,and a very nice keying waveform on CW.

I am happy to see that the Japanese manaufacturers have reversed the trend of designing and producing ever more expensive radios. I have heard the price with all filters is in the $3,200 bracket, and I think this is the right price. At this price, the FT1000MP will soon replace the FT1000D at my station (also the OT5T contest station). Although YEASU does not see it asthe replacement for the FT1000D (which they will continu producing), I am convinced the new FT1000MP will very rapidly replace the Ft1000D and

othertransceivers in many shacks!

No, this is not a YAESU add, but I cannot find anything wrong with
the new radio, except that the CAT instruction set does not match the
FT1000D's set. As long as that problem is not resolved, I will HAVE to
stick to my old trusty FT1000D, although In wiched I could keep the radio
in my shack.
But as I know, this radio will probably give me a new one on 160 (Heard),
I know it will serve a good purpose...

I have a Icom 211 2m allmode in working condition, and a Mirage 215G
allmode amp. 2 in 150 out.
the amp is in very good condition.
The radio has some dings here and there and the "rit" switch. (which i
never use) is broke.
The radio and amp work great though..

$500.00 obo or trade for 6m all mode........
Thanks

5906. Kenwood TS-430S: long-jumper RTX !

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-03 00:00:00 UTC
From: Max <max-l@usa.net>
Message-ID: <01bc2595$a18787e0$2f0478c3@default>
Source record: 181364

Hi,
a little problem to propose about a Kenwood TS-430S:
some time ago, suddenly, it started to show a problem I never heard.
While RTX is working, receiving or transmitting, it jumps suddenly on
a different frequency.
All functions are perfectly working after and before the jump and
there is no connection among frequencies on wich he jumps.
Temperature
conditions aren't also connected to the problem. It's quite random in
all cases.
Another typical show is a black-out frequency & S-meter panel with a
long beep. In that case all functions are locked. A little hand blow
on chassis resolve the problem.
I sincerely don't know the cause of this problem. It seems to be all
and nothing...!
Can anyone help me ? More, it is difficult to test RTX while it
jumps.
Maybe this is a problem happened to other 430s and solutions could be
simple to achieve.
Thanks to all will help me.

Hello Bob....
Well 5 watts from a ht should be just fine for most "local" repeaters.
I also live in the la area and listen on duck and magic mountain
repeaters.

Jeff, your blanket statement "...commercial radios *will* be able to
withstand such temperatures" is not necessarily correct. Certainly, some
will, but come won't. For instance, Yaesu markets their VX-10 radio for
police and fire use and except for the CPU and programming, its identical
to their FT-10,11,50 radios. Continuing, Radio Shack sells 'commercial
radios' that would probably melt in the sun!

5915. ICOM HandiTalkies

Hi,
Name is Gary,
I have for sale a Kenwood TM-733A with backlit mic and duplexer.
This radio is only three months old and has box/manual and warranty.
I bought this radio on a whim because they were closing them out for a
good price. Well, you know how that is...buy first and find out if you
really need it later...Hi.
I would like to get what I paid for it.
That is $395.00 and I will split shipping.
I will be out of town for a few days but you can reply to me at this
address:

Hello all...

I have a Butternut HF6VX Multiband Vertical Dipole for sale. Here are

the specs for the antenna:

Shipping weight: 12 lbs/5.4 kg

Height: 26 ft/7.8 m

Feedpoint impedance: Nominal 50 ohms with included

matching line.

SWR at Resonance: 1.5 or less--all bands.

SWR bandwidth for 2:1 or less: Entire 10, 15, 20, & 30 meter

bands; 250-300 kHz on 40 meters,

30-100 kHz on 75/80 meters.

Power Rating: 1500 watss PEP 80-10, 400 watts

PEP on 30 meters.

Wind loading area: 1.5 sq ft/0.15 sq m.

I am only asking $135.00 for it, and that includes shipping via UPS

Ground. Money Orders will ONLY BE ACCEPTED. No C.O.D. or personal

checks allowed. When I accept the money order, please include your

home telephone number so I can call and give you a UPS Shipping Code

so you can track it via UPS if so desired. Thanks for all who read this

From: w5kft@nts-online.net
Message-ID: <5fg6hn$36m$1@news.nts-online.net>
Source record: 181390

I have a very nice Kenwood TS-120 solid state HF transceiver that covers 10-15-20-40-80 meters and runs 200 watts input. It runs on 12 volts so it can be used mobile and has the matching Kenwood mobile brakcet with it. Also has the matching Kenwood PS-30 AC power supply so it can be used inside the house. Also has matching Kenwood base and mobile mikes, boxes, books, and manuals. Will sell the complete package for $550 or trade for other ham gear, scanners, or computers.

[snip]
>The poster wanted to monitor 2 frequencies in the SAME band...the W2A can
>NOT do this.
>I should know...I've had one for years (and love it), but I do know it's

The Icom IC2SRA *will* do this on two meters. I know... I have
two of them (and might be willing to part with one of them :-).

The "two meter transceiver side" will, of course, monitor any two meter
frequency, and an extended range of frequencies above and below two meters
(but not as high as 222 MHz or 440 MHz.)

The "scanner side" of the radio will monitor any frequency from
about 25 MHz to 900 MHz or so, INCLUDING two meters.

So you can monitor one two meter frequency on the transceiver side,
and another two meter frequency on the "scanner" side.

I have actually done this. During the aftermath of Hurricane Fran,
the State Emergency Operations Center (EOC) was operating on 146.88 MHz and
the Wake County EOC was operating on 147.15 MHz and I needed to monitor
them both at the same time... and I COULD do so, and did so with my
IC2SRA.

5935. FT-50 on 220 MHz!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-04 00:00:00 UTC
From: Paul Racine <racine@ibm.net>
Message-ID: <01bc282f$c5309280$f7ca2581@willy>
Source record: 181393

I own an FT-50R and I have used it on the 222 MHz band with success! The output power is low, but it DOES transmit and it DOES receive.

A mod DOES exist that allows FT-50R owners to get on 222 MHz. If you are interested in this mod, it is listed in the YAESU Mod book that a friend of mine purchased. The mod involves a minor operation on the radio immediately below the touch tone pad-- a resistor must be removed.

It does work!

5936. 200+ UHF Rec needed

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-04 00:00:00 UTC
From: blum@goodnet.com
Message-ID: <331bb7ed.2045132@news.goodnet.com>
Source record: 181394

Need 200+ UHF Receivers!

I am looking for a small (Aprox 2" x 2" x .5") UHF receiver.
If my project is successful I will need aproximately 200 of
these units every few months. I can design and build these
units myself if need be, but I do not want to re-invent the
wheel. Here are more specs:

Input sensitivity: -118 db
frequency: xtal controlled, aprox 415.0 Mhz FM
channels: two, within 1Mhz of each other
RF Bandwidth: 12Khz
Audio bandwidth: 100Hz - 3 Khz
Audio Output impedance: 50 - 100 ohms
Audio Power output: 60 - 100 mW
Power Supply: 6V, 40mA, maximum
Temperature range: -22F to +140F
Package: Circuit board assembly only

(Note: the input sensitivity requirement is a little "stiff",
I could add a preamp if necessary)
If you have information that would lead to locating such a device
please forward to blum@goodnet.com Include specifications and
price.

Ok, I found it myself. Dial up the memory in question. Hold "F" for
1/2 second. Then press "MR".

Why couldn't I figure this out 3 minutes earlier before I posted this
message?

You can look at the pictures and read the English on the front panel.
It's pretty informative. Also, I noticed the picture of the chassis
looks like it has plug in boards. I hope it uses the same extender
boards as the 990. So far it goes to 6M, has dsp (at least in the audio)
with adj hi and lo pass, does 100W (us version), abt 26W AM, and seems
to have plug in boards. Could you read the Japanese if you had the fonts
to display it?

5950. TS-570D review

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-04 00:00:00 UTC
From: hopewell@ctg.net
Message-ID: <857488095.22207@dejanews.com>
Source record: 181408

Hello out there,

I have seen several requests for info on the Kenwood TS-570D in the past few days. I purchased one in mid-January and posted my own "product review" on the radio about a week later. In the interest of assistance, I've re-posted that review here. I've added a few comments to bring it up to date. Hopefully this will be useful to some of you!

(The following was posted on 1/23/97)

Hello,

Since I had posted several messages asking about features and other aspects of the Kenwood TS-570D prior to buying one last Sunday, I thought I'd come back one more time and chip in with my two cents' worth now that I've owned the radio for several days.

The TS-570D is everything I hoped it would be, and then some. It's got a fantastic receiver and the AF DSP filters work extremely well, expecially on CW. Using the CW TUNE feature along with the DSP filter bandwidth selector, you can crank the CW bandwidth down to 50 Hz in eight steps with little or no ringing. As far as the TX audio is concerned, I've had several comments from hams both in my area and in other states (and one DX) tell me it's excellent.

(Ed note. The praise continues; now worked a few dozen states

and more than a dozen DX, CW and SSB, all barefoot with a dipole
20 feet off the ground. I've used the rig in both semi- and full
break-in CW, and it works both beautifully.)

The radio has a CW feature that I'm surprised wasn't mentioned
in QST's product review or even on the newsgroups: The CW
message memory keyer (which has three channels that can store
up to about 50 characters each and can be stacked) also has a
repeat function that allows you to set the break-in, touch one
button, and the TS-570D will call CQ for you, pause for a period
of time *you* select from 1-60 seconds, and then call CQ again!
Yeah, what a lazy, couch-potato way to call CQ, but think of
all the uses for this *standard* feature in contests and Field
Day! It'll keep retransmitting your message, waiting in between
transmissions, until you hit your paddle or the "clear" button.
Once you've set the menu items that specify this function and
the delay time between repeats, you just have to hit one button
to repeat this function whenever you want to call CQ.

You can plug a straight key AND a paddle into the rig and use
both AT THE SAME TIME.

The rig's heatsink is massive; it's basically an aluminum
"case within a case." The rig is so well-shielded that you have
to remove an entirely separate cover (with 12 screws, I might
add!) once you've removed the outside cover of the radio! The
rig hardly got warm to the touch during a good 2 hours of full-
output CW the other night. Heck, it took me two days worth of
making sporadic contacts before the cooling fan ever

came on!
(And compared to the FT-890 I've been using, the fan isn't
loud.) Heck, the fan's enclosure is even molded into the cast-
aluminum rear of the radio. As the owner of three earlier
Kenwood HF rigs, I have to say that by far, this is the best-
built Kenwood I've *ever* seen.

The manual is thick and very user-friendly. It appears by
the charts, diagrams and just plain easy reading, Kenwood
is trying to be really impressive with everything having
to do with the TS-570D.

The built-in antenna tuner is also impressive. It has no motors
but instead uses relays to do all its matching. I was skeptical
of this, but the rig sold me! The only antenna I have connected
to one of the rig's *2* antenna ports is a half-wave 80-meter
dipole up about 20 feet. (Hey, I live in a townhouse -- I have
to do what I can. You should be impressed I was able to put up
an 80M dipole at a townhouse!!!) It's fed with 75 feet of RG8X
coax.

(Ed note. While it *does* find a match just about everywhere,
it cannot hold one on 40 or 30 with my 80 meter dipole. The
mismatch is too severe. This isn't surprising to me; my
TS-850SAT couldn't do it either. Asking an internal antenna
tuner to match one antenna on any frequency between 1.8 and
29.7 MHz is asking a lot! The TS-570D came with an extra card
saying the internal AT isn't designed to match an antenna
whose direct SWR is above 3:1. I checked my antenna's
performance, bypassing the tuner and measuring the 80 meter

dipole's SWR directly on all bands, and sure enough, while it
was at 3:1 or better on most bands, it was at infinity on 40
and 30. My wife bought me a new MFJ-969 antenna tuner for my
birthday and it does a great job where the internal tuner had
some trouble on my single antenna (ie, 160, 40 and 30). On
80, 20, 17, 15, 12 and 10, the 570's internal tuner has no
trouble finding a match (and quickly) on my 80 meter dipole.
Now, back to the posting ...)

The LCD bar-graph meter displays three sweeps *simultaneously*
while you're transmitting. Normally it displays RF output, SWR
and ALC. If you turn on the speech processor, then the SWR
section disappears and a COMP LEVEL section appears, giving you
COMP LEVEL, RF output and ALC simultaneously. The meter has a
"peak-hold" feature that holds the highest segment for two
seconds. It cannot be disabled.

Here's another interesting tidbit that's probably useless, but
it's interesting to show other hams as they drool over your new
radio -- the display dimmer has five levels, the lowest of
which turns the backlighting completely OFF! Not that you'd ever
really want to use that setting, but it sure makes the display
look wild!

I like the fact that Kenwood is finally starting to implement an
RIT control that acts like Yaesu's CLARIFIER control. My earlier
TS-850SAT had an RIT that only varied 1.2 kHz either side of
center. The TS-570D's RIT control is continuously variable over
a 9.95 kHz range either side of "center" with a CLEAR

button.
(No center detent you have to return to in order to
clear it; I
always found that method kinda cheesy.)

To make an extremely long post come to an end, I'll
summarize
by saying that for the money, the TS-570D is the best
deal in
an HF radio I've ever seen. (I've been a ham for 17
years and
NO, I DON'T WORK FOR KENWOOD even though it may sound
like it
from this message!) I'm just thoroughly impressed with
this
radio. It's easy to use yet PACKED with features. I've
heard
people postulating that it may come down in price a bit
in
the next few months. Well, if you can get one for even
cheaper
than the $1499 I paid for it at a local hamfest, that
makes it
an even more amazing deal.

Now, if it'll just hold out for the long haul ...

I'll be happy to answer any questions, aesthetic or
technical,
about this radio.

73,

Meade, KA4RQB
Richmond, Virginia

: [snip]
: >The poster wanted to monitor 2 frequencies in the SAME band...the W2A can
: >NOT do this.
: >I should know...I've had one for years (and love it), but I do know it's

The Yaesu FT530 and FT51R can also monitor two VHF 2m frequencies at
the same time.

: The Icom IC2SRA *will* do this on two meters. I know... I have
: two of them (and might be willing to part with one of them :-).

: The "two meter transceiver side" will, of course, monitor any two meter
: frequency, and an extended range of frequencies above and below two meters
: (but not as high as 222 MHz or 440 MHz.)

: The "scanner side" of the radio will monitor any frequency from
: about 25 MHz to 900 MHz or so, INCLUDING two meters.

: So you can monitor one two meter frequency on the transceiver side,
: and another two meter frequency on the "scanner" side.

: I have actually done this. During the aftermath of Hurricane Fran,
: the State Emergency Operations Center (EOC) was operating on 146.88 MHz and
: the Wake County EOC was operating on 147.15 MHz and I needed to monitor
: them both at the same time... and I COULD do so, and did so with my
: IC2SRA.

> Thanks, 73, Mike...

Mike,

Hi. I've owned a TS-570D for almost two months now and
I haven't experienced any problems at all with QSK. Mine
does a wonderful job with full break-in. QST's January
product review gave the rig good QSK marks as well. Maybe
with all the menu settings available to "custom-tailor"
the TS-570D to the operator, possibly something wasn't
set up quite right for QSK on the radio he was using?

Just offering a suggestion, because my '570 is a champ
with QSK. Check out my posting "TS-570D review" for more
details on the TS-570D.

>
>Also, would appreciate any info on how the ICOM HandiTalkies compare with
>the Kenwood or Yaesu.
>
>WD6CMP

I own a W32 and it is the finest HT I've owned or seen. The W32 is an updated W31, and Icom "reconfigured" certain functions on the keypad. In July 1995, QST reviewed the W31 and found that a button must be pushed before the volume could be adjusted. QST called this an annoyance, and I tend to agree.

Early production W31's needed an optional UT-93 board for CTCSS decode and tone scan, later production runs included as built-in. You may want to check that. Also, new W32's come standard with the 9.6v battery for 5w xmit, most W31's came with the 7.2v battery. There is a simple keyboard mod for the W32 for extended Rx, don't know if that's possible with the W31, again you may want to check.

Compare to Yaesu and Kenwood? Weak audio is a problem with older Yaesu dual-banders and the current FT-51R isn't much better. Kenwood audio isn't great either, and there's no keyboard mod for extended Rx, you gotta open the rig up and add SMT parts.

Take a look at the new generation of dual-banders, specifically the Icom T7A and Yaesu FT-50R. They cannot receive simulaneously on both bands, but they can be purchased brand new for just over $300.

Good luck and73

You won't get it to work ...

The automatic repeater shift is worthless for the standard US +5 MHz
shifts They have it set up for a -5 shift and only in a small portion
of the band that doesn't correspond with the US repeater output
section.

Other than that and a couple of other minor quirks, It's a
really rugged radio with above average performance and a lot of
features at the closeout prices currently available.. I use
mine daily and have enjoyed excellent results in the presence
of signal conditions that drive other units up the wall.

Robert J. Nagy wrote:

> Is the AM RX excellent? How about that Synchronous Detector?
> Does it sound good with the Pass-through/6khz filter settings?

Yes the AM is excellent with a couple of caveats. The 6 khz filter is I think wider than that. The sync mode is USB only and can lock up to 5 khz up from where you intend. I have installed a 3.5 khz filter from KIWA to aid. It helps the sync to lock better and provides better selectivity.

> On the 4 NR DSP "modes"- Can you set any parameters on
> them...ie. attack times...etc? And- how do they sound?

> you can use for general lowering of the noise without
> greatly degrading the SSB RX quality?

The Noise Reduction seems to help only on CW. No adjustments I know of are possible.
I haven't compared the rig to other DSP units so I dont know about some of what you are describing. I have used DSP on SSB some to clean up the slop but use of the IF SHIFT and WIDTH controls can help too without the DSP.

> I really appreciate this...and would like to get any comments
> you would like to offer on this super-looking rig.

This is my first HF rig as I have been a ham only for 1 yr 2 mo. I can't complain. I do use it a lot for short wave listening. The fidelity seems good.

Brian

Source record: 181437

Hello All, I have just recently replaced the scanner in my vehicle and would like to protect it from my 2 meter amateur rig. I live in a fringe area and usually have to run 50 watts and occasionally 160 watts to reach the closest repeaters. My problem is that I would like to find a way to protect my scanner from this rf overload since the antennas aren't placed too far from each other. I did at one time see a product from Electron Processing that done this called the "SCANR SAVR" but I beleive they are now out of business. I also found a product by DEO and is the DEO RG 2000-U, I asked the campany selling the product and was told it would not work for this application. I would like something that does this automatically and I don't want to crack the case on my 2 meter transceiver which is under warranty to wire something to the ptt circuit to disconnect the scanner antenna whenever I key up. Any help or suggestions you can give will be greatly appreciated.
You can either email me at (mwise@iland.net) or post to this newsgroup,

Thanks In Advance,
Michael Weiseman

>

There is a mod opening the whole thing from 50-999 minus 540-590 or something like that. do a keyword search in altavista or lycos, The ft-50 pages should show up. the vhf pll unlocks at 240 and the uhf picks up at 320 and goes all the way to the top. There is no am tx whatsoever. too bad, Would be a nice way to get on yay-m. the sensitivity at 330 mHz is about a respectable .4 uv useable fm, I haven't measured am. the sensitivity holds pretty consistently through 515 mHz, obviously better in the amateur bands, mine speced out at .26uV 12dB sinad at 146 mHz and slightly better at 445.0 mHz. 820-935 mHz sensitivity is equal to or better than reciever specs' for most 800 lmr equip I have tested.

Note: To other amateurs who may want to or possibly already have, I cannot get the sensitivity or transmit power to increase in the 220 band by any measure of tuning the vhf bandpass coils on the rf board, Anyone else had any luck? the radio draws a fairly high level of current on tx at 224, but I can only get 26 mW out. Must be getting lost somewhere.

> What's the sensitivity like on VHF airband, any use or should I better

5985. Re: Autek RF1 RF Analyst vs MFJ 259

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-05 00:00:00 UTC
From: Lyle Koehler <k0lr@emily.net>
Message-ID: <331E1545.41BB@emily.net>
Source record: 181204

I own an RF-1 and have used an MFJ-259. The MFJ-259 obviously has a much wider frequency coverage, a more accurate frequency readout, and has the additional advantage that it can be used as a frequency counter. As far as impedance measurements are concerned, I consider the RF-1 to be more versatile over the range in which it operates. Its SWR readings are also more accurate, if I remember correctly from a QST review a while back. Depending on your requirements for complex impedance measurements, maybe neither instrument will fill the bill. Although the MFJ-259 has an RF resistance reading, I think it gives a true resistance reading only at resonance. Someone will certainly correct me if I'm wrong.

The RF-1 has capacitance and inductance scales, but it does *not* tell you whether you have a capacitor, inductor or resistor connected to its output. It simply measures the magnitude of the impedance, and then calculates what value of capacitance or inductance would have that impedance at the measurement frequency. But it's still a very handy gadget to have around the shack.

Regards from Lyle, K0LR

I represent the Siemens amatuer radio club in, Beeston, Nottingham.
Wehave recently aquired a 2 element hf yagi, for contest use. The
problemis that the boom is missing. Does anyone know the
reflector-directorboom spacing for the antenna, as it is a multiband
trapped beam, made byWeston. Any help would be much
appreciated. Ben Seaby, 2E1
DPW, On behalf of the
Siemens ARC.

5987. Advice Please!

Greetings all. I am going to take the Tech
exam this Saturday. I am trying to decide
what to buy for my first radio. Maybe some of
you could give me some pointers.
I have noticed that there seems to be a premium on used
2 meter mobiles.
Is there enough activity on AM, SSB to justify the
extra expense for an "all mode" 2 meter rig? or would
I be better served to buy a dual band mobile FM only
for about the same money? Any and all thoughts appreciated.
Any ideas pro or con on going the used radio route for a first timer?
Thanks.....

Chip

5988. WTB GE Master II Test Set

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-05 00:00:00 UTC
From: Dick DiVittorio <dickd@magicnet.net>
Message-ID: <331E2303.42CE@magicnet.net>
Source record: 181207

I am looking for a GE Master II Test set.

We are using a Master II UHF mobile radio that was duplexed by Versatel Comm. a couple years ago. It has developed some problems in the TX and requires trouble shooting.

If you have one of the test sets for these in excess of your needs please email me with the facts.

I could also use a full manuel for this unit...
Thanks for the help

Dick

Hi
Name is Gary,
I have a as new kenwood 733a with backlit mike and duplexer for sale.
This radio is less than 3 months old and has less than ten minutes on
it.
I bought it on a wim because they were selling them for such a good
deal.
I would like to get my money back which is 395.00.
I will pay shipping.
no trades

The Mics are RF-Limited products.

I believe all of those are still availible thru RF Limited.
206-222-4295
FAX: 206-222-4294

the SDM-1000 for the Ranger is #11003F - $99.95
the AC7000 #10001F - $189.95
the SP-1 #86356R - $49.95
CW-1 CW Board/variable out #86353R - $49.95

More than any metal? How about tungsten? Offhand I can't think of any
plastics which can sustain 2700 degree temperatures. Now some ceramics
can, and perhaps some carbon fibre composites can for a moment or two,
but plastics?

Of course this is all rather moot since any fire which raises the
radio temperature enough to melt a metal case isn't going to leave
the innards unscathed, not the mention the firefighter carrying it.

I agree with your comments. I want to buy a Ten Tec only because it is
American but I also want "VALUE" wich in my eyes includes bells and
whistles. If ten Tec would include DUAL PASSBAND TUNING like the IC-756
that would help. Also the Price of the radio OMNI 6+ is $2500.
For that price I can buy the Icom 756 which has 6 meters and a built in
Antenna Tuner .

5993. FT-1000MP Question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-05 00:00:00 UTC
From: Robert John <RAJohnGM@worldnet.att.net>
Message-ID: <331E51A5.6045@worldnet.att.net>
Source record: 181212

Ready to purchase a FT-1000MP. In reviewing the literature, I failed to see any mention about a sub-tone for working 10 meter FM repeaters. Is this feature on the FT-1000MP like on my FT-890?

Any reply would be appreciated.

Tnx, Bob, AA8X

5998. Re: Using Two Power Supplies

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-05 00:00:00 UTC
From: John Buck <jrbuck@interpac.net>
Message-ID: <331E6E02.2E46@interpac.net>
Source record: 181217

Connecting two large supplies in parallel can be a very unstable
condition. It can cause oscillation and burn out of one or both
supplies.

If the supplies are stable in this hookup then because
The regulation voltages are slightly different, one
supply will hog the current. As that supply load increases the
voltage should drop slightly and the second supply may pick up
some of the load. The degree of this effect depends on the load
regulation capability of the supplies and how close the voltage
settings are.

If the supplies are just basic transformer rectifier setups then you
probably can share.

If you isolate the two supplies with series diodes to the loads
you can experiment safely. My concern is that precision electronic
regulators may not be able to stand the direct parallel connection.
If the supplies automaticaly current limit on excess current by allowing
the voltage to drop without folding back to very low voltage, you
may be able to share.

Aproach this with caution, I have not seen the schematics of the
supplies you are interested in.

My point here is that it can be an expensive bad idea, but it may
work under specific circumstances. Be very careful.

Perhaps I can shed a little light on Ez-clone. It is a small effort
carried out by a programing house that primarily contracts to the
Federal Gonvernment. Recently the primary developer of the EZ-clone
left the firm and the development of the Kenwood interfaces suffered.
I spent last Friday at their offices and there were several Kenwoods
present for this development, which is continuing.

The current product line is for DOS and 32bit Windows applications ie:
WIN95 LINUX and NT. They used to have a WIN 3.x line but no longer
offer it. As Paul Harvey would say, "That's the rest of the story."

Charlie,

I have operated a number of rigs over the years, but never the IC756. I currently
own an Omni VI. The receiver has been everything I expected. Many stations
reported difficulty copying our 75m net last night due to splatter from a high
power (who bragged of running 14kw?!) station up the band. I copied the net R5
with both 1.8 kHz filters in the line; without... well, it wasn't a pretty sight here
either.

The following equipment is for sale:

Heathkit SB220 2kw Amplifier
Yaesu FT-301D 10-160m Transceiver
Yaesu FP-301 Power supply
Yaesu FV-301 (VFO Channel Selector)
Yaesu YO-301 Monitor scope
Yaesu FTV-250
Heathkit Electronic Keyer for CW
Manual CW Keyer
General Electric CB Model 3-5804D
Ultralec CB Converter (for use thru AM radio)
MFJ Versa Tuner II MFJ-941 (SWR etc)
Intermatic Time Switch T104
Alliance Antenna Rotator motor and control w/azimuth indicator
Micronta 12V DC power supply (from 120V)
Astatic Microphone D104
Emerson stereo headphones
Nova Pro stereo headphones
Drake 3300LP Low Pass Filter
Bell Industries Low Pass Filter
Lots of miscellaneous stuff: coaxial cables, connectors, resistors,
fuses, etc.

I would prefer to sell the whole package, but may separate items
if forced to.

Please email any reasonable bids to me at fwapsk@highway1.com

The equipment is in good condition, and has been in storage for 15
years or more. I have manuals for the major pieces of equipment.

Paul

6005. TEN-TEC OMNI-VI upgrades

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-05 00:00:00 UTC
From: 103563.1076@compuserve.com
Message-ID: <5fj0kf$7m0$1@mhadf.production.compuserve.com>
Source record: 181254
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment

Does anybody who owns an OMNI-VI plan on having the upgrades done to their rigs? I am undecided as to whether or not I will have it done to mine. If you have the upgrades done, which one will you do; Option 1, 2 or 3? Any opinions on this one are appreciated.

Hi , I have a military power supply that I could use a little help with. I need the manual or schematic for this (dont have time to reverse engineer this and fair radio is no help) Fully functional, but would like to know a little bit more, maybe see if I cant make a couple of heavy duty 13.8 vdc power supplies.

here is the info off of the data plate.

POWER SUPPLY
PP4763A/GRC
INPUT 115/230 VAC 23/11.5A
OUTPUT 27-29 VDC 50A

HAS 2 METERS (ANALOG) 0-80 DCA, 0-50 VDC

thanks for you time, 73 de Phil K6LS

This is an update of my previous post. I have for sale a Alinco DJ580 dual bander for sale. This radio has extended tx/rx,drop in charger,mobile adapter,all manuals,cross band repeater,CTSS and I am even throwing in a 12 Volt mobile operrations center(it has a light and two cig. plugs to run things.) All for 250.00 plus shipping. Reason for saling is I have lost my job and need to sale.
thank you all

I picked up a new T7A in December and I am quite happy with it in all
repects.
4 watts on 2 m and 3 watts on 70 cm, full CTCSS and tone scan, and it's
really easy
to modify it to fully open up the bands.

If you have any questions about it, feel free to ask!

Ohhhhhhh, temper, temper. This is why NASA uses them huh. I understand now.

How about using it for a clear 'OVER' signal in high Static like QRM.

But you probably use Morse Code dont you. In that case it shouldn't
influence you in the least :-)

I have a Generic Brand Laptop for sale. It's a 386SX/25 w/1meg ram, 80meg h/d, VGA monochrome monitor and a case to carry it in.
The plug in the back broke, so I rewired another plug which works fine with the power supply I have for it. I also have the same plug connector attached to the car cord I made for running it in your vehicle. Great for portable packet, DX loggings, tracking satellites like I do and any other thing you can think of to use this hand tool.

Asking price is $300 obo and I'll pay the shipping.

You can e-mail me if you need any further info, or leave your number and I'll be more than happy to call you back. If you want to call me, you can anyday but Sunday between the hours of 4pm and 8pm pacific time. 702-453-0821

Thanks all, awaiting reply.

[Ohhhhhhh, temper, temper. This is why NASA uses them huh. I understand now.

Actually, it appears that NASA has dropped it too.

The purpose of the beep during the Apollo days was because CAPCOM had
two separate commo links to deal with -- pressing the key put him on
the radio to the spacecraft, and releasing it put him back on the
Mission Control intercom circuit. The chirp told him that he was
toggling one way or the other. In a high-noise environment, the
chirp is very useful to the person pressing the key.

Other Mission Control specialists likewise toggled between the
intercom and a private link to their respective support teams -- in
"Apollo 13" we see this in action, as one of the specialists responds
to the center-engine cutoff by asking his back-room team if the
flight was threatened (as far as their area of expertise) by the
event. I will assume that these also heard toggle chirps.

I would like to add a chirp cricuit as well for my own high-noise
operation, but only in side tone.

[Article crossposted from rec.radio.amateur.antenna]
[Author was Danny Stone NT]
[Posted on 5 Mar 1997 16:26:36 GMT]

I am looking for comments on the RF1 vs MFJ-259.

What I am interested in is the accuracy of the instrument
in the scope of what is intended to do (i.e., the technical
performance).

I am not looking for a feature or price comparioson (that can
be garnered from the ads).

My primary applications include complex impedance measurements,
component measurements, and velocity factor mesurements (for
now!)

My opinion at this point is that the '259 is a more versatile
instrument, but the RF1 is more accurate. Am I wrong?

Tnx !

I have that article here...somewhere. I also have a commercial unit
that can be set for two tones, on on make and another on break.

While I agree with most people that in normal conversation it is
very annoying (reason for the on-off switch:)) it has it's place.
Under noisey conditions, especially on traffic or emergency nets and
for phone patches, especially neophytes, it can be extremely useful.

I'll see if I can find the schematic in the file cabinet.

Hi Greg,

I'm tenatively planning to have mine done, but will wait for reports from the early adopters. If I do have mine done, I'll go for the full meal deal #3 - a. I want to put the data filter in the first IF along with the CW filter (gotta check to see if that's a "supported config-uration!") b. at my QTH, the random noise reduction, if implemented properly, will be mighty handy.

If you're not already, I recommend that you subscribe to the TenTec reflector (see http://www.contesting.com/TenTecFAQ.html for info.) The other TenTec-ies there will likely have some news. (That's where I'm watching!)

From: "Chuck (Jack) Hawley" <c-hawley@uiuc.edu>
Message-ID: <331DEBBC.78D8@uiuc.edu>
Source record: 181290

Does anyone know how to fix the FT890 xmit spike that occurs when the power is say about 50 watts and certain hard syllables are sent on phone? It seems that the ALC is just a little slow and the power output spikes to about 200 watts before the ALC takes hold and limits the power to 50 watts as adjusted.
Is there a site for Yaesu service bulletins?

Thanks, Chuck, KE9UW

>Tnx !

-----snip-----
How did you plan to do complex impedance measurements with the MFJ?
As I indicated in your post in rec.radio.amateur.antenna, I use the
RF1 for this application. The MFJ simply won't perform this task
(that I am aware of). The MFJ will work nicely for mesuring velocity
factor or cutting a 1/4 or halfwave length of coax. As far as
accuracy, I believe that QST just had an article in the past couple of
months on the accuracy of several noise bridges, the RF1, and the MFJ.
If I am still missing the point of your question, please feel free to
drop me a note.

6044. FT-50 and UHF airband AM?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-05 00:00:00 UTC
From: malachias@godmachine.demon.co.uk
Message-ID: <331df44e.333374@news.demon.co.uk>
Source record: 181293

Hi there,

thinking of buying an FT-50 and wanted to know if it's able to receive AM on the UHF 225-400 MHz band. Are there any measurements on sensitivity out there? Is there a hidden AM TX mode #grin?

What's the sensitivity like on VHF airband, any use or should I better take my old but reliable scanner?

Does the extended receiver really work? I mean my old IC-24's display goes to 999 I think but it's completely deaf.

I'm not completely convinced of this radio yet, the egg-shape doesn't make it feel very good on the belt, same with that semi-rigid rubber duck dummy load-thing. Backlit keypad would have been great. All this riduculous advertisment. Tried to get some more info from YAESU UK on testing procedures to MIL-STD 810. They didn't dare to fax me because I was realtively precise with my questions. I mean if my car key will withstand a droptest I cant say it's MIL-STD 810 rated. They don't give the slightest background information on that and it seems they want to keep it secret. Something dodgy is going on there. So why don't they tell us if the radio is able to withstand certain vibration patterns (which could be useful for rough amateur (ab)use or if it's been tested to fungus susceptability (who cares)?

6046. FS: Digital LCR Meter

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-05 00:00:00 UTC
From: vhadley@ee.utah.edu
Message-ID: <331df732.15354266@news.xmission.com>
Source record: 181295

For Sale:
Wavetek LM22A Digital LCR Meter
Inductance, Capacitance and Resistance Tester

Features:

- 22 User Ranges for LCR Testing
- Tests 7 Inductance Ranges from 200uH through 200H
- Tests 8 Capacitance Ranges from 200pF to 2000uF
- Tests 7 Tesistance Ranges from 20 Ohms to 20 MOhms
- Measures Dissipation in L/C Ranges
- Complete portability with 9V Battery
- 2% Basic Accuracy

Performance/Value

The LM22A is a hand-held LCR meter featuring a high level of accuracy and performance. Is is capable of testing 8 ranges of capacitance, and 7 ranges of inductance and resistance (equivalent series resistance). The LM22A can also measure dissipation, a valuable indicator of inductor and capacitance performance to within 1.0% accuracy. Two different internal test frequencies (1KHz and 120Hz) are used for optimizing the accuracy of the readings between the high and low inductance and capacitance ranges.

Readings are displayed on a high contrast 3-1/2 digit LCD. Fused input protection is provided on all ranges and over-range indication tells the operator when a wrong scale has been selected.

The LM22A has it's own 9V battery for complete portable operation or it may be operated from an AC source using an optional AC Adapter. A "LO BATT" indication is displayed during the last 5% of battery life. Typical life for a 9V alkaline battery is about 40 usage hours.

The LM22A comes ready to use with alligator clip test leads, an owners manual, and a spare fuse.

Dimensions: 174mm (H) x 90mm (W) x 41mm (D)

****

This unit is essentially brand new! Purchased last year, I used it for about 1 hour and have not used it since. It is in perfect operating condition.

I have the original box it came in, the test leads, manual
and product registration card (still blank).

I will also throw in the wall adapter I got for it for bench
use.

Asking $165 plus shipping.

Source record: 181298

Hi:
I am a ham living in Japan. I agree with his comments regarding price.
I managed to pick up a 706 for around 90k yen in December 95.
As for the Ft-920, yes the list price is low. In the March issue of the
Japanese
CQ Ham Magazine, the interior of the rig is shown. It is quite sparse. Also
the
machine doesn't weigh much for its size, hence the guts are light .

I don't have the article or ads infront of me right now, but I thought I
read
that the DSP was AF and not IF, hence a cost reduction. It uses MRF255's
for it's finals, hence it is similar to the IC706 and DX70(100W @6m
version)
so it's a low cost solution. The auto antenna tuner is a conventional twin
motor
drive for the two tuning caps, probably a derivative of the unit in the
FT-900.

Last week, none of the large ham stores in Akihabara had the unit.
I assume it will be at the earliest the end of March when the machine comes
out.
Or, considerably later, why, because the of the timing of new sales tax
increase in japan.
On April 1st, 97 the sales tax jumps from 3 to 5% so Yaesu may try to beat
the sales tax jump or
not.

I follow your instruction to do that but I can't see any different.
As I know the VHF and UHF are separator and the range are also
different, Now I want to know how to expand both.

Range on each band
VHF 108.000 to 135.995 AM
136.000 to 199.995 FM
425.000 to 444.990 FM

UHF 136.000 to 199.995 FM
300.000 to 999.990 FM

How can I expand the range 444.990 and up at the VHF band.

Thank for your cooperation

Good day and 73

6057. Interference from True Fitness Treadmill! Help!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-05 00:00:00 UTC
From: fallowsj@cadvision.com
Message-ID: <5fiuiq$1lse@elmo.cadvision.com>
Source record: 181446
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I continue to have severe radio interference to short wave from my neighbour's treadmill (True Fitness Model 450). The interference is in the form of hash pulsing about twice a second (depends on treadmill speed) all the way from BCB through about 20 Mhz. It is a bit like the noise from a TV oscillator (peaking every 15-20 Khz) but pulsating rather than steady. It is between S7 to +10 dB, extremely strong.

The manufacturer sent my neighbor a line filter (which they say cured two previous occurances of this interference) but it did not help. I sent them a fax saying this, but that was two weeks ago, and I have heard nothing back.

I am trying to get the attention of True Fitness, and could use some other cases. If you have experienced this intereference, I would appreciate hearing form you.

Also, if you have solved this problem, I would appreciate your advice even more.

I have a a treadmill made by a different manufacturer and it is absolutely RF-silent, at all speeds, so I know this is not an issue with all treadmills. At this point, however, I do not know if this hash is emitted by all True Fitness Model 450's, or if there is something wrong with my neighbor's unit.

I am attempting to put on one web site all locations of SERVERE WEATHER SPOTTER CLASSES. If you know of spotter classes in your area please send the schedule to me via e-mail or US mail and i will scan it into the web site. At the moment I will be using the weather page at www.axnet.com/united/wxlinks.htm . You may link your site with it, also let me know if you do and i will return a link back to yours. With each class please give;

date:
time:
location (hall or college and city,state):
hosted by:

or just send me the URL of a schedule that you've seen on the internet and i will do the rest.

send e-mail to:

united@axon.axnet.com

send US Post to:

n9npp/matt
1034 piccadilly court
bolingbrook, il usa
60440-1018

THANK YOU, N9NPP/MATT

6059. Re: 2M Handheld: Which brands are good/poor ?

Newsgroup: rec.radio.amateur.equipment

Source record: 181150

I'm also a new Tech. I bought two Yaesu FT-50R radio's (one for my wife, one for me) after doing a bit of research on the subject. I'm really sold on these little radios. I'm even more sold now that I've been using them for about a month. It seems like every time I think "boy, it sure would be nice to be able to", I go to the manual and sure enough, there is a feature for that purpose. They are very rugged little radios. We do a lot of back-country stuff and they are really good for that because of their size and because they will receive most frequencies from 70 MHz to 999 MHz allowing us to hear weather stations, FM radio, Aircraft Band, Police bands, etc. They are also dual banders. We have been using them with repeaters and they work very well for that application (they're even smart enough to figure the offset and + or - for any given repeater frequency-- a real plus for beginners like us). I've been told they have weak antennas. Ours seem to work, but we only get about 2 miles range in simplex, radio to radio.

Hope this helps.

In order to get the radio to go back into BAND XXXXX, you must first have a valid 440 freq in one VFO and a valid 2 meter freq in the other VFO...then select the 2m VFO, turn the radio off, then do the KNOB-PTT-LAMP and it will work...it works for me every time.

I have a friend who has a problem his yaesu ft-50r handheld.

Once he stores a frequency with odd offsets, he can't remove
the odd offsett from the memory. Has anyone else had this
problem, and knows how to fix this problem.

Please Respond by e-mail to chis@mindspring.com as I don't check
this group often.

Thanks

>have a proper license yet.
>

Yes, it's a great starter rig, but $400 is WAY too high for a TS-520!
For that price, I'd expect it to be a TS-520S (the later model) with
CW filter, remote VFO, external speaker, and desk mic. You should be
able to buy a bare-bones TS-520 for about $225 to $250 in good shape
these days.

Source record: 181157

I am looking at getting a new radio. One of the above of course.

However, I am in a bit of a delima. I have a couple of friends who have the 990 and really are impressed with it.
However, I am looking at the DSP at the IF stage with the 870.
With a thousand dollar difference in the prices I am wondering if the extra thousand dollars is worth it.
One of my buddies had a ts-450 with a Timewave DSP-9+. Since getting the 990 he only has to use the DSP for the hetrodyne stuff. He finds the digital filter on the 990 works as good or better than the DSP.
How much better could the DSP at the IF Stage on the 870 be.

Anyways anyone out there who has an 870 could you send some of your comments please. Also if there is anyone who has used a 990 and a 870 would be great.

Looking forward to replies

Josh,

I purchased a 520 new in 1974 when they first came out. I assume this is the model you are looking at and not the 520s. The 520 has the built in DC power supply and I used it mobile coast to coast several times. I owned it for 8 years and still wish I had it. It was a great rig and quite inovative for the time I still feel that it's noisblanke was the most effective non DSP blanker I ever used. For $400 though I would hope it would be in mint or near mint condition... this seems to be a higher than average price and for just a little more you could find something more modern such as the Icom 730 series and similiar radios.

Just remember that this rig does not have all the accepted bells and whistles, but if you accept that, It should do a good job for you.

> For that price I can buy the Icom 756 which has 6 meters and a built in
> Antenna Tuner .

At the risk of continuing to pound on a dead horse ... the logic of all this continues to escape me.

I like Icom radios. They make a good product. And everyone has their own notion of what makes one radio "better" than another.

In the 756 you are paying for -- a built in tuner, a fancy display and stuff to make a panadapter, 6 meters, and a few other bells and whistles. Remeber that all of these items simply decrease the value of your dollar that goes to the "R" word. (The "R" word is that five letter word that comes after the reference to pork in the generic name of our hobby -- you know -- R-A-D-I-O).

A lot of the stuff you are paying for is superfluous. I've use an Icom radio with Twin Passband Tuning for 7 years. The number of times you will really USE this feature (other than just because you like to knob twiddle) will be few. The built in tuner is inefficient, has limited range, and will just be a source of annoyance when you discover that it won't match the corner fed Boggleblaster 2000 all band wire you have just put up. You can probably get a better radio that is really optimized for 6 meter work (and let the engineers concentrate on giving you a decent HF radio). And so on.

I'd suggest you take a look at some of the archived threads from the TenTec reflector at http://www.contesting.com/_tentec/. There's some interesting information there on the general subject, and perhaps some light in the darkness ....

Hi,

Name is Gary and I have for sale a Kenwood TM-733A
Duel bans mobile radio. This radio is only three months
old and is in excellant condition. Reason for selling is
that I bought it on a close out wim and did not really
(NEED) it. It comes with warranty, Backlit mic, Duplexer,
Manual and box. I paid 395.00 for it and would like to get
380.00 for it and I will pay for the shipping in the US.
I think this is a Good deal since a new one comparable to
this radio is around 460.00 new. This radio has the removable,
remote face plate if you want to mount raio seperately.
I do not have this cable.
No trades

6082. kikusui oscilloscope review

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-06 00:00:00 UTC
From: Neil Heckt <neil@aade.com>
Message-ID: <331FAA21.20A4@aade.com>
Source record: 181173

Just got my Kikusui COS6100M Oscilloscope from Tim Bass at

mailto:bass@silkroad.com voice (703) 222-4243

http://www.silkroad.com/ fax (703) 222-7320

$276 including shipping. I feel like I stole it.

Unit was clean and in great shape, bright CRT.

All controls function well, switches and pots all smooth and noise free.

Features 100 MHz bandwidth with a 20 MHz bandwidth limit switch.

Touts 5 channels although only two are full functioned.

Channels 1 and 2 are similar to most other scopes ie: TEK

5mv to 5 volts / div with a X5 multiplier giving up to 1mv/div

1Meg, 20pf (standard for most scopes including TEK)

AC/DC and GND input switch

vertical position controls

XY ploting with channel 1 as X and channel 2 as Y

Channel 3 has AC/DC and GND switches

Sensitivity .1V or 1V per Div only

Vert position control

The sweep rate switch can be set to use channel 3 as an external

sweep input.

Channels 4 and 5 are really the external trigger inputs for

Trace A and Trace B but they can be viewed as additional traces on

the CRT. Sensitivity is fixed at .1V/Div.

Vertical centering controls are on the back of the cabinet

Dual Sweep

..5 sec to 20 ns / Div with a X10 sweep expand

Sweep Modes are: A, A int by B, Alternate, B delayed and single sweep.

Appears to have video delay line as I can see all the leading edge of a square wave.

Z axis input on the back.

Beats the hell out of most new scopes costing up to $500 and as good as a TEK 465 at half the cost.

Doesn't come with any probes but you can get some nice ones from

Jameco

http://www.jameco.com

100Mhz probes (X1, X10) $29.95 stock number LF210

60MHz probes (X1, X10) $19.95 stock number LF189

I plan to get two of the 100MHz and two of the 60 MHz to use with this scope.

Repair could be a problem but then TEK repair is not easy to come by either. Kikusui is located in California so at least you won't have to ship it to Asia.

Highly recommend you steal one of these from Tim while he still has some.

Neil

from Friday, June 6 through Sunday, June 8, 1997. The
Texas Packet Radio Society (TPRS) http://www.tprs.org/ will
again host extensive programs on packet and digital subjects,
and has announced the program schedule and speakers.

In the past, these programs have been extremely well-attended,
so be sure to mark you calendar.

HAMCOM 97
TPRS Digital/Packet Program Schedule
Arlington, Tx. Convention Center

Saturday, June 7, 1997

9:00 - 9:30 Introduction to Digital Modes - Dave Wolf, WO5H
9:30 -10:30 Intro to Internet - Lee Ziegenhals, N5LYT
10:30-11:30 Spread Spectrum - Greg Jones, WD5IVD, Tom McDermott, N5EG
11:30-12:00 TEXNET update - Harry Ridenour, N0CCW
12:00-12:30 TPRS annual meeting
12:30- 1:00 break
1:00 - 2:00 APRS - Mike Heskett, WB5QLD
2:00 - 2:30 DXing with 2 Meter Packet - Presley Smith, N5VGC
2:30 - 3:00 Weather / NWS - Bob Morgan, WB5AOH
3:00 - 3:30 Radio Modifications - Joe Borovetz, WA5VMS
3:30 - 4:00 Channel Capacity - Tom McDermott, N5EG

Sunday, June 8, 1997

10:00- 10:30 Introduction to Digital Modes - Jim Neely, WA5LHS
10:30- 11:30 BBS forum - Dave Wolf, WO5H

For Sale

Icom IC-T7A 2meter/440 HT

I bought this radio about 2 months ago as a second radio and it has not been used, so it is in the box and ready for a new owner. I decided to sell it as I could use the money for other interests.

It is in New Condition with all the accessories, manuals, and items that it came with. I also got a protective leather pouch for it and that is included.

Price: $239 and I will pay for shipping (UPS ground, insured)

Please send email to me if you are interested. You may also phone me at: (619) 562-5960

Thank you,

>>> Davida - NI6X <<<

6087. Radio Shack HTX-202, comments . . .

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-06 00:00:00 UTC
From: Bob Diaz <bdiaz@pacbell.net>
Message-ID: <331FBEE2.3EDC@pacbell.net>
Source record: 181178

I've received a lot of helpful comments via email and this user group
regarding 2M HTs. Thank you to all who have taken the time to write.
I just got my license and call sign, so all of this is still new to me.
All the comments I've received have helped a lot.

I've searched the user groups using Deja-News for messages on the
Radio Shack HTX-202. A brief outline of what I've found follows:

A lot of users out ther really like their HTX-202. While every product
has some unhappy users, for every 1 "I have a problem message", there
appear to be, a lot of "this is a great unit" messages.

Quite a few people wanted to modify and extend the frequency range of
the unit. This isn't possible. By limiting the frequency range to
the 2M Ham Band, the unit very good at rejecting intermod problems.

The HTX-202 isn't as small as the other units, nor is it as "sexey",
but several feel that it's a real "work horse" and in some areas seems
to perform better than other units that cost more.

The antenna connection isn't the best, flexing the antenna too much make
break the connection inside the unit.

Several people commented that they like the extended 5 year warrenty ($40).

If there's something I didn't understand or made a error about, please feel
free to post your corrections and comments. Right now, I'm thinking that
I'll purchase the HTX-202 as my first unit. So any additional comments on
it (both good and bad) are welcome.

Sincerely,

Bob Diaz

6088. Capacitor Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-06 00:00:00 UTC
From: Walter Fairclough <wfairclo@netcom.ca>
Message-ID: <01bc2a88$c6fb2d40$475bb5cf@wfairclo.netcom.ca>
Source record: 181179
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

My greatest fears have been realized. I need a replacement electrolytic for my Halli SX-117 receiver.

This capacitor is a can 3"H X 1-3/8D. It is twist mount and the lugs are spaced 1" apart. The hole in the chassis for the capacitor terminals is a 7/8" square hole. Measurements may not be precise due to the rather limited working space.

The (C117) is a 80/80/60 mfd at 250 VDC electrolytic, Hallicrafters part No.
045-000884 and has a manufacturers logo CI followed by the numbers 2406231 which I assume is the manufacturers part number.

If anyone has one or knows where I can get one or have this one refurbished, I would appreciate it.

Thanks for reading.

Hello John

I owned a Venus and the matching Apollo amp for about 3 years in the 60s (it is that old LOL) and I found it to be a very reliable piece of gear and perhaps a better 6 meter SSB radio than it's contempories, the Heathkit SB110 and the Swan 250. One thing I can pass along to you, when mistuned these radio's were prone to spurious emmissions. Other than that, I have always considered the Clegg VHF gear of the 60s to be the best available at the time. If I remember right, the receiver had a nuvistor front end and I think nuvistors are getting scarce. There was some receiver solid state (FET) conversion mods published for this rig in the 70s. Good luck with it if you buy it.

The Subject says it. This radio is in very good/like new condition with the original accessory speaker and including the manual. Low miles, etc. :-)

$225 shipped prepaid UPS COD in continential USA or possible trades. I could use: 3 1/2" SCSI drive or drives, a Mirage or other good video card for fixed frequency CAD type monitor, 100TX PCI ethernet cards or a hub, or a not-worn-out SCSI backup tape drive. Possible cash boot either way on trades.

Edit my reply-to or EMail george@durequip.com.

thanks,
Geo. Anderson

The TS-520 is a relaible rig if you find one in good condition. The
price you mentioned seems a little steep to me unless the rig is in mint
condition with the box, manuals, etc. and has been completely checked
out
and the transmit driver and finals replaced recently. I see them at the
hamfests here in Florida for around $250 in good condition.

Look forward to hearing you on HF.

6100. Re: IC756 vs TenTec Omni VI+

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-06 00:00:00 UTC
From: akent@bga.com
Message-ID: <5fla5t$1a6e@news3.realtime.net>
Source record: 181224

I have a 756, and don't know anything about the Omni VI. I would love to put these two rigs side by side, and play.

The 756 has good receive, and a VERY good noise cancelling circuit for SSB and CW. The biggest thing the 756 has going for it is the built in REAL TIME SPECTRUM ANALYZER! You can hear a signal, hear the splatter, and look at the 'other guy' doing it! Then you can adjust the filters from the front panel to knock him out. It is really incredible. I haven't looked yet as to how they do it, without a completely separate VCO for this function. It's really neat though.

Granted, I don't know how the Omni functions, and it may very well be a better radio, but I have to say that I absolutely love the features of the 756. You get 6m too, albeit in a fairly bogus way. It won't save offsets, CTCSS tones (more than one), and lots of other stuff that we are used to on VHF from the lesser expensive rigs.

As much as I WANT TO BUY an American made rig, I can't/won't yet. I ask WHY? We can do it. Why don't we? I WANT bells and whistles. It's just a matter of stupid computer stuff at that level. I am an engineer. If I thought that I could make a living building amateur radios, I would. I don't think so. That must be the problem. Perhaps I should call TT, and offer some kind of deal, where we could offer the functions of these Jap rigs on US made ones. I don't know. TT is the last, best hope for US made HF radios, maybe.

Overall, I give the 756 an B+. It would get a downright A+, if it handled the 6m band, and memory stuff better.

BTW: The phase nose issue is bogus. There is no problem with mine, as I measured it with equipment in my lab. It is very clean. Perhaps early units had a problem. I wonder if the rumors aren't radio envy at times.

Have fun!

> Michael Weiseman
> N0VXD

Two possibilities might be a) a very efficient notch filter that blocks
all
signals between 144 and 148 MHz from entering the scanner (put in line
with
its antenna, of course, not on the 2M rig), or b) a circuit inserted
between
the 2M rig and its antenna that detects RF going out, and automatically
trips
a relay that disconnects the scanner from its antenna.

If you're interested in a homebrew solution, you might want to take a
look at
the 1997 ARRL Handbook, pages 13.46 - 13.49, where they present an
article
on the construction of a 2M linear amplifier. Part of that circuit
senses the
RF output of the 2M rig and switches the amplifier into the circuit when
you
transmit, then switches the amplifier out when you release the PTT.
That part
of the circuit (without the amplifier) might be adaptable to do the
trick for
you.

The Handbook also has an entire chapter (16) devoted to filters. You
might
find a solution for the design of a notch filter for the scanner to
block the
2M signals.

Or you might want to try BOTH, since the finite switching time of the
relay
would probably allow a brief burst of high-power signal from the 2M rig
to
hit the scanner before its antenna gets switched out...

RG-9 is 50 ohm double shielded coax with silver plated shield and center conductor. It has essentially the same power and attenuation ratings as RG-8 or RG213 but with very much better shielding. RG-9B was renumbered RG-214 some time ago, so any cable marked RG-9 is quite old. It is very good for interconnections on duplexers and other applications needing high shielding/low leakage. It would be a waste to use on an antenna.

Hi to all,
I've a RF generator, synthetized, made from
Adret Electronique, model 6100. It is a very powerful
instrument, working from 10 Khz to 110 Mhz. I've also the
manual, but unfortunately I don't have any of the
available Auxiliary plug-ins. I'm just thinking to build the
one needed to obtain modulated signals. It should be the
auxiliary plug-in model 6500 also from Adret Electronique.
Does someone has the schematics of this plugin? It should be
in the Auxilary plug-in manual, which unfornately I don't have.
Thanks a lot

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Has anyone heard of a 2m FM mobile amplifier called "The Battery Saver"?

A local newbie (a 17-year-old codeless tech) brought me this amp and asked me to work on it for him. It's designed to be driven by an HT and is supposed to put out about 40 Watts. It's a very strange design and I'm having trouble making sense of it. Normally, amps like this are dirt-simple, but this one's not. There is no manufacturer's name on the amp, just the name "The Battery Saver". There is also no info inside it anywhere.

If anyone can give me any information at all, I'd appreciate it. This kid dropped a bunch of his hard-earned money on this crummy amp, and I really hate to think it's been totally wasted.

6128. Help w/ Celluar mod on FT-50r

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-07 00:00:00 UTC
From: McGill <mcgill@ott.net>
Message-ID: <33208DAF.7EC5@ott.net>
Source record: 181052

I have a FT-50r that I have successfully done the Mars/Cap mod on but I cant seem to figure out the Freeband mod (the mod that allows you to receive in the celluar band). The Freeband mod that I have been following is listed below. If anyone has any suggestions they would be greatly appreciated. Please e-mail responses to: mcgill@ott.net

Yaesu FT50R

-Perform Mars/Cap mod by removing solder blob 1
-Buy the ADMS-1C computer kit
-dump your radios data into the computer & save file #1
-dump computer data #1 to radio, and pull plug out of radio before its complete
-turn radio off, push and hold knob and lamp and turn on again
-dump radio data into computer and save file #2
-merge file #1 into file #2
-dump file #2 into radio

What you end up with should be:
-your original radio memories and settings
RX 76-540 590-999 cellular included
TX 120-220 350-500

This mod restores cellular, and wipes the Mars/Cap band limiting info. Transmitter will lock over the entire range & transmit to a nearby scanner, but I dunno what power output or spectrum quality is like

6130. Re: Alinco DX-70TH first impressions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-07 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5fq41f$g4t@geraldo.cc.utexas.edu>
Source record: 181054

Kudos to Martin for reviewing the Alinco DX-70/TH.

I have owned the TS-50 and the DX-70...and I can tell you that
the DX-70 is light years ahead of the Kenwood.
There is no comparison. The DX has great SSB TX audio, and a very
hot and selective RX.

On the down-side, the FM TX audio is easily overdriven and not
top quality. (Hey, YOU don't have to listen to it!)

VFO control is not as easy as the big rigs, but all the small
ones have that problem. The tuning dial is a bit light feeling too.

All in all, the rig is a real winner...and was not fairly reviewed
in QST. Its also a real value.

6131. More "Hands-On" with the IC-756

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-07 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5fq5s4$g4t@geraldo.cc.utexas.edu>
Source record: 181055

Well, I've now had a lot longer to play with the IC-756.

Interesting.
I will make some simple observations.

The internal construction is the best I've seen.

The front end of the RX is not as immune to overload
as say..a TS-850. I've had broadcast grunge across the
entire band when my local AM station is at full power.
(with a 550' dipole at 87' -you must use the -12db att.)

The SSB RX audio is very revealing. Good stations sound
great...and bad ones sound horrid.

The filtering scheme is a little insulting because it holds
you to some pre-set filter combinations instead of letting
you devine any combination.

The AM filtering is a mistake.
15khz filters in both IF's are useless during evening
shortwave listening...say around 6 mhz. Even with the
15khz/9khz combination, it is still uselessly wide. All
you hear is distortion and heterodynes.
The AM "narrow" position which only lets you use
both ssb filters or one wide filter and one ssb filter.
It is so narrow as to make the audio unlistenable-to.
You can expect users to replace a few of the ceramic
AM filters (which are most likely soldered in) with
more realistic filters...like 12/6khz. I don't know what they
were thinking, but it's completely wrong. (know of any other
radios out there with 15/15khz AM filters?)

50mhz has a hot RX. The +16db filter works wonders on 6
meters.

TX audio can be described in one word....Clean.
With the internal TX Equalizer..and a good mic.-this
just may be the first Icom to produce Kenwood audio!

The controls are pure Icom..that is- confusing.
If you are used to dual VFO's and memories...you
will be lost for days on this...and frustrated too.
The manual is typical. You read it 5 times and still
are unable to figure out what they mean. I am only
referring to the VFO/memory operation here. Other
controls are intuitive.

The one golden lining here is that this is a half
computer /half radio. I fully expect a complete
software upgrade to be issued. (Hope)
So- with some filter changes...mods...and updates,
this little gem will go down as a ground-breaking
unit. It's still an Icom, but a Next Generation
Icom. I hope there is a two way info exchange so that
Icom will revise the firmware and work with us to bring
this rig up to it's potential.

```

As stated in the subject header, I want to buy a used surplus King KMC-95 HF Xcvr and it's companion auto-tuner for it, the King KMC-96. They were made in the 1970's by King radio, and discontinued when King was bought out later and was renamed to "Bendix-King", which was later again bought out and renamed to "Allied Radio/Bendix-King").

I've seen them at swapmeets in the range between $15-$25 each. I will pay twice that, depending on the condition of the equipment.

This gear might also be owned by ocean fishermen, since it was made for use in the HF High Seas radiotelephone service. But since the ITU changed the channel frequencies of all the HFHS in th 1980's the KMC line became nearly useless in it's intended service because it had only the old outdated ITU channel frequencies programmed into it's ROM and since King Radio went belly up years ago, there was no hope of an upgrade ROM being produced. That's why they sell so cheap in perfect working condition. So if you have some, especially if you have a lot of them, I want to buy 5 or 6 of them,(2 for my own mobile & base use and the rest for parts).

Email me if you have any of either model and we'll see what we can negotiate from there.

Ted <ted@caprica.com>

The Manufacturers make a huge profit on the filters for these rigs. I
was told by a Ham radio Store owner that the Yaesu FT-900 Collins Filter
that was once an option for $170 really cost him $35 !!!!!

I am purchasing a new Icom 706 Mark II and will need a antenna tuner for
the base that covers 1.8 to 60 MHZ. I want to buy this tuner but am
leary as to MFJ Quality Control Poor Reputation. Can I buy this tuner
with confidence???

Sorry, I am not perfect. I was told by the Yaesu Sales Rep at Boxboro,
Mass New England Ham fest that Yaesu will have a Icom 706 "COPYCAT"
that will have 2 meters and 440 MHZ. I have heard no denials or
confirmations from Yaesu. Interesting?

How does the new Standard C156A HT stack up against, say, the Rad Shack HTX-202? I will be buying a new ecomomy HT soon, and need to make a decision. I know the HTX is rugged and has a reputation based on quite a few years of production.
On the other hand, I know very little of the Standard C156A.

Dave, KF4PGP

Hello all...

I have a Butternut HF6VX Multiband Vertical Dipole for sale. Here are

the specs for the antenna:

Shipping weight: 12 lbs/5.4 kg

Height: 26 ft/7.8 m

Feedpoint impedance: Nominal 50 ohms with included

matching line.

SWR at Resonance: 1.5 or less--all bands.

SWR bandwidth for 2:1 or less: Entire 10, 15, 20, & 30 meter

bands; 250-300 kHz on 40 meters,

30-100 kHz on 75/80 meters.

Power Rating: 1500 watss PEP 80-10, 400 watts

PEP on 30 meters.

Wind loading area: 1.5 sq ft/0.15 sq m.

I am only asking $135.00 for it, and that includes shipping via UPS

Ground. Money Orders will ONLY BE ACCEPTED. No C.O.D. or personal

checks allowed. When I accept the money order, please include your

home telephone number so I can call and give you a UPS Shipping Code

so you can track it via UPS if so desired. Thanks for all who read this

in advance....

As far as I can tell, it still has the brain-dead FM repeater split handling (split memories don't substitute for proper +/- offset configurations), they still haven't improved on the (awful) AT180, and they still don't have a decent narrow SSB filter.

Yecch...

Tell me about it!
I found some on trash day and put "N" connectors on a 50 ft piece
to test. I came up with .37 db/100ft on 2m (not bad) but
5.7db/100 ft on 432! No wonder the cable guys use so many
amplifiers!

Good coax for short runs or low freqs.

Hi Greg...

I've had my Omni-6 for almost 5 years. I looked at all of the options
available, including selling my Omni and purchasing a new one, and then
decided to just go with option 3. My Omni has all of the standard filters and
TenTec offered me $1500 on trade-in for the Omni-6 Plus. However after
re-listening very close with my Omni on 80m CW for several days, I decided my
receiver was excellent and I don't know that I would gain too much by buying a
brand new Omni-6 Plus.
The advantage of selling an older one like mine, is TenTec has substantially
improved their pre-testing of components before assembly, plus I would have
one that has been recently tuned up.
I don't expect to see any magnificant changes with the upgrade. The additional
9 MHz filter may help during DX contest, and the DSP filter may help when your
really trying to dig a weak DX signal out of the band noise floor. We'll see.

6158. News Rover -- Searches newsgroups for what you want - 218 0307040014 DHK

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-07 00:00:00 UTC
From: NewsRover-Mgr@sandh.com
Message-ID: <5foup7$2fo@apple.telalink.net>
Source record: 181111

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for messages about items that you collect. Once you tell it what to look for, News Rover will scan a set of newsgroups and collect all messages that contain what you are searching for. For example, if you are interested in messages related to slide rules or calculators, you could specify a search expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any messages that match the search expression. This searching is completely automatic, so it works while you sleep, work, or play. The search expressions can be as simple as a single word, or they can be complex expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes both UUencoded and MIME base64 images, and it combines and reconstructs binary files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images with quick-action keys to delete, view full size, and save to permanent collection.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies! With News Rover the news is ready when you are!

> Frank KG9H
he fan is supposed to be quiet on receive as long as the temperature of
the heat sink is fairly cool. Also, the new radio gives 20 watts on 2
meters! I also heard several "BUGS" have been fixed including the
problem of a Diode being blown on the two meter receiver when you
transmit on 6 meters . The second IF filter slot is nice. You can no
put in the 1.9 khz filter plus either 250hz,350hz, or 500 hz filter.
My sources say the radio will cost $1300 at first but the price will
drop once the supply of existing Icom 706 radios is exausted.
The price on an excisting IC-706 has dropped to $1075 (including rebate)
plus a free separaration kit! That is a $150 value!!!

6164. Convert A.W.A. Model RT80 to 70cm Band

```
Information for Yaesu 8000R owners
----------------------------

I have already provided this information. However for those that are interested,
here it is again.

MODS
----
Extended transmit (130-175MHz)
1/ Open case
2/ Pull out front panel and look on the inside.
3/ There is a row on diodes on the edge. Remove the 6th diode from left.
Be very carefull. The diode is minute. Use a small soledring iron. Keep for
the future.
4/ Close the radio and reset it.

Undocumented feature
--------------------
AM mode can be turned on at will. In VFO mode, press F/W for half a second and then VFO.
AM mode comes on and off this way on the left side (AM mode is udeful for military
listening on the UHF band.

Enjoy the radio. You can easily listen to cellphones on their image frequency at
between 700 and 800MHz.

Peter Vekinis, KC1QF
```

6177. Alinco DX-70TH first impressions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-07 00:00:00 UTC
From: Martin Feldman <mfeldmn@ibm.net>
Message-ID: <332037DC.63C7@ibm.net>
Source record: 181130

Greetings to all:

I just purchased a new portable/travel ham shack, including an Alinco DX-70TH for HF/6. (Those of you reading rec.radio.swap will now understand why I sold all that stuff!) I am also a former Icom IC-706 and Ten-Tec Scout owner. I've now had the rig a few days, and would like to share my first impressions, since there have been a number of threads about these radios.

I'll start with the bottom line--the Alinco is far, far superior to the Icom. Unless you absolutely, positively must have (a very mediocre) 2 meter radio in the same box, I could not recommend the IC-706.

Some specifics: The Alinco offers narrow filters for CW (500 hz) and SSB (1.0 khz) as standard features, built into the radio. While 1.0 khz would seem to be very narrow for SSB, the filter is extremely effective at eliminating adjacent, unwanted signals without any degradation of the intelligability of the desired signal. (In plain English--it works extremely well!) The Icom SSB filter (1.8 khz), is not nearly as effective, and cannot be installed at the same time as the CW filter.

As documented in the QST review, the Icom suffers from very poor image rejection. If you do not install the narrow CW filter, you will hear 2 signals 800hz apart, where you should only hear one. If you install the CW filter, you can't have the SSB filter, which means listening to lots of QRM. No such problem on the Alinco. The receiver seems to be better in all respects, and handles nearby strong signals much better than the Icom.

I got on with a local group on 28.490 last night. I was told that the audio quality was "much better than the IC-706" with the stock hand mic. (thanks, Ron), and that the speech processor was quite effective in adding extra "punch" to the signal.

The noise blanker is fair at best, but certainly no worse than the IC-706. The attenuator (10 db or 20 db switchable) works well for strong signals, as does the preamp for weak ones.

Ergonomics are also much friendlier than the 706, with most of the controls being quite intuitive. By the way, unlike an IC-756, the Alinco will store repeater splits in memories, as well as mode, and CTCSS (PL) tone on or off (see below).

Any idiosyncrasies or weaknesses in the DX-70 so far? I've found two: The speech processor on/off is buried in the setup mode--this is the only feature I would want to change frequently that is buried in a menu. The other (minor) disappointment is that the PL tone is

programmed by dipswitches on the bottom of the radio--you can't program different tones into memory. This is a real throwback (although my FT-290RII is exactly the same), and I hope it will be addressed in the DX-71. However, since 99% of my HF and 6 meter operation is SSB/CW, this isn't really a major concern.

I've stuck to comparisons with the IC-706. I also metioned the Ten-Tec Scout at the beginning of the post. The Scout has a fantastic receiver, but the plug-in modules are relatively inconvenient. It also lacks IF shift, FM, AM, split operation, general coverage, 6 meters, the ability to control an auto-tuner, and anything that might remotely be called a "bell" or "whistle". By the time you add the cost of the noise blanker, mic., and modules it costs as much as the Alinco, so I can't recommend it. If you want QRP and very low power consumption, the Argo still makes sense.

Speaking of tuners, in addition to the Alinco EDX-1 manual tuner, and the EDX-2 auto tuner, the Alinco DX-70TH can control an Icom AH-3, Kenwood AT-50, and Kenwood AT-300. Wiring instructions form the accessory port to these tuners are included in the Alinco instruction manual. I've never heard of another manufacturer giving wiring instructions to competing equipment. However, if you own one of the above (say, from a TS-50 or IC-735), it's a nice touch.

I've been long-winded. If you have any questions, feel free to e-mail me at mfeldmn@ibm.net. Perhaps after a month or two of opertaion I'll be able to add something to this post. First overall impression: the Alinco DX-70 is the best of the super-small radios on the market so far.

6178. Alinco DX-70TH first impressions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-07 00:00:00 UTC
From: Martin Feldman <mfeldmn@ibm.net>
Message-ID: <332037F3.13DB@ibm.net>
Source record: 181131

Greetings to all:

I just purchased a new portable/travel ham shack, including an Alinco DX-70TH for HF/6. (Those of you reading rec.radio.swap will now understand why I sold all that stuff!) I am also a former Icom IC-706 and Ten-Tec Scout owner. I've now had the rig a few days, and would like to share my first impressions, since there have been a number of threads about these radios.

I'll start with the bottom line--the Alinco is far, far superior to the Icom. Unless you absolutely, positively must have (a very mediocre) 2 meter radio in the same box, I could not recommend the IC-706.

Some specifics: The Alinco offers narrow filters for CW (500 hz) and SSB (1.0 khz) as standard features, built into the radio. While 1.0 khz would seem to be very narrow for SSB, the filter is extremely effective at eliminating adjacent, unwanted signals without any degradation of the intelligability of the desired signal. (In plain English--it works extremely well!) The Icom SSB filter (1.8 khz), is not nearly as effective, and cannot be installed at the same time as the CW filter.

As documented in the QST review, the Icom suffers from very poor image rejection. If you do not install the narrow CW filter, you will hear 2 signals 800hz apart, where you should only hear one. If you install the CW filter, you can't have the SSB filter, which means listening to lots of QRM. No such problem on the Alinco. The receiver seems to be better in all respects, and handles nearby strong signals much better than the Icom.

I got on with a local group on 28.490 last night. I was told that the audio quality was "much better than the IC-706" with the stock hand mic. (thanks, Ron), and that the speech processor was quite effective in adding extra "punch" to the signal.

The noise blanker is fair at best, but certainly no worse than the IC-706. The attenuator (10 db or 20 db switchable) works well for strong signals, as does the preamp for weak ones.

Ergonomics are also much friendlier than the 706, with most of the controls being quite intuitive. By the way, unlike an IC-756, the Alinco will store repeater splits in memories, as well as mode, and CTCSS (PL) tone on or off (see below).

Any idiosyncrasies or weaknesses in the DX-70 so far? I've found two: The speech processor on/off is buried in the setup mode--this is the only feature I would want to change frequently that is buried in a menu. The other (minor) disappointment is that the PL tone is

programmed by dipswitches on the bottom of the radio--you can't program different tones into memory. This is a real throwback (although my FT-290RII is exactly the same), and I hope it will be addressed in the DX-71. However, since 99% of my HF and 6 meter operation is SSB/CW, this isn't really a major concern.

I've stuck to comparisons with the IC-706. I also metioned the Ten-Tec Scout at the beginning of the post. The Scout has a fantastic receiver, but the plug-in modules are relatively inconvenient. It also lacks IF shift, FM, AM, split operation, general coverage, 6 meters, the ability to control an auto-tuner, and anything that might remotely be called a "bell" or "whistle". 6180. CTCSS Decode for Icom IC-2350H - Cheaper?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-07 00:00:00 UTC
From: "Chad W. Johnston" <webmaster@nuwaysupply.com>
Message-ID: <01bc2b15$cf9fdf80$4c4e99ce@chadj>
Source record: 181133

Does anyone know of any place that sells the UT-89 CTCSS Decode module for the Icom IC-2350H for LESS than $88.00 (new)?

I'm looking to buy both the UT-89 and the UT-101 (DTMF Decoder) for the 2350H, but AES and HRO don't seem to want to budge on those accessories. I'm not sure why the CTCSS decode is so darn expensive, but it is.

Any comments would be appreciated, and please send me email IN ADDITION to any responses you make to this message.

Thanks and 73 -

Chad Johnston, KC8ADE

The thing to do here is to look up MIL-STD 810. For that matter, mine has
hit the ground (hard) a couple of times with no ill effect. And the nice
rubber seals in the case gotta be worth something.

Lets see, while I've been writing this I've been doing a hot-bot search...

MIL-STD-810 Environmental Test Methods and Engineering Guidelines

MIL-STD-810: Provides environmental test methods and engineering guidelines
for designing military equipment
(including packaging) for environmental extremes. Details many valuable
testing methods and forms the basis for much
of the required military testing for safety certification.

Couldn't find the text of the standard, but I didn't look very hard.
Exercise left to the student.

Well..... OK

But somehow solid state is not as satisfying on a cold night in the shack... and I still feel that my old Drake R4C receiver (tubes), with mods, was the best one I ever had.

Help me on this one if you will. So what if the transmission line is 75 ohms? Dipole is close to 75 ohms. A typical SWR meter is designed to read 50 ohm stuff. 75 divided by 50 is 1.5. If you use 75 ohm coax to feed a 50 ohm dummy load, using a 50 ohm SWR meter, your reading is going to be 1.5 to 1. Whoopee! Am I missing something?

Josh:

For $400, I would expect that radio to be in very good condition, well tested, etc. It is a good beginners rig. I operated that radio in 1979 for my summer camp counselor job for about 3 months.

If you could spend a few hundred dollars more, however, you would get a radio which is 100% solid state, and has a general coverage receiver so you could receive on all frequencies between 1000 and 30mhz.

Good luck with your new radio; I hope you enjoy listening and get your transmitting priviliges soon!

In the $400 range with some careful looking you would be able to find a substantially more modern radio, there are Icom 720a's, TenTec Omni's, and Kenwood 120-130-180 and even 430's and 140's that show up in the 350-500 range pretty regularly. These are solid state, some are general coverage, and don't require a lot of tuning and loading when you change bands, etc. The 520 is a tough old rig, but should be 2-250 unless it is a complete station and is an S or SE model. I suggest a bit more shopping and research, you won't regret it.

db-4015-1.

Would like to know the info concerning bandpass, attenuation etc. etc..
Hopefully I will be able to use said cavities on a repeater installation
for 2 meters.

Could also use info concerning proper tuning of said cavities.

Any help/info would be greatly appreciated.

If you have or come across an Ocean Hopper receiver in fairly good shape I am still looking for one. Please respond by E-mail and thank you for reading this. Mike

6203. Need ideas for power supply 12 VDC, 30 amps maximum.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-07 00:00:00 UTC
From: dwcomm@aol.com
Message-ID: <19970307023201.VAA15573@ladder01.news.aol.com>
Source record: 181193

I'm looking for some low-cost ideas to run a 12 VDC - 30 amp radio using 120 VAC house current.
I have a catalog which lists various power supplies available, and the highest one is a 17 amp unit which costs $110.
How would it be if I used a 12 volt car battery for the power along with a battery charger at the same time? If the charger was capable of putting out 30 amps, then that would work, whouldn't it? Even if I used my present 6 amp charger, - well, I might trip the breaker inside of the charger.
I don't actually have the 12 volt - 30 amp radio. I'm looking into this matter for someone else. I do have a radio which is protected by a 10 amp fuse, and I do intened to try the battery with charger on this one. As for the 30 amp appliance, I've never handled anything like that before.
Thanks, Dale

Yep, you're missing something here...:-)
I'm looking for a system that I can program to various frequency
shifts, and monitor two frequencies at the same time.
Best option would probably be a dual receive handheld with computer
interface. Any ideas?

Hi...I used to ride motorbikes quite a bit. I found the best headset was the intercom/cb mic setup that Honda uses. I have a friend that worked at a bike shop and he had lots of extra mics from warranteed sets. At first I wired a ptt to the handlebar and the mic and helmet speakers to the radio. Worked great. Then I sold my bike (Suzuki 1000 GL) and bought a Yamaha Venture Royale. I took a Kenwood TM201A and mounted it in the trunk. I used the Yamaha sound system/intercom and wired into it. It was great! I could have vox intercom w/passenger (wife) that muted the broadcast radio when talking. When the 2m radio broke squelch it also muted the broadcast radio. I mounted the same ptt on the handlebar as the previous bike had. I had to use a 1/2 wave antenna. I had many reports @70+ mph that said it was like I was at a base station! No road/wind noise at all. I have since sold my bike. I did save one of the mics though just in case I decide to get back into bikes. My new toy is a '91 red/red Vette. Lots of fun. I had to do some thinking on how to do a clean install on it. I found just the ticket. Hope you get things working good for you....ttfn

Hi,
Any comments good or bad on the Icom IC-761 transceiver. I know it
was later replaced by the IC-765, but I've heard the 761 was actually
BETTER due to the passband tuning (which was the same as the IC 751A).

What's to know about this rig. Does it have volatile RAM like the
751A. How was the power supply/antenna tuner (dependable, etc).

thanks,
mailto:joentam@transend.com.tw

Message-ID: <5fo2iq$7jq$1@info1.fnal.gov>
Source record: 181198

I have a Uniden HR2510 10 meter transceiver which the VCO seems
to act up only when the antenna is connected. The VCO either
falls out of lock, or zooms off to God-knows-where. (The VCO is
perfectly stable on the dummy load. My antenna SWR is 1:1.)
Most of the time, the SWR jumps around when transmitting, which
seems to indicate the VCO is falling out of lock or making spurs.
Sometimes the SWR goes really high which indicates the radio is
transmitting, but not where the antenna is resonant and there is
no signal present on the frequency displayed. Sometimes it
doesn't receive, another indication the VCO is on vacation.
I installed additional RF bypassing on the RF amplifier stages
in an attempt to minimize stray RF within the radio which seemed
to help a little, but there is still another bug in there
somewhere.
Has anyone experienced these types of problems?
Any fixes or cures? Please respond to: torpor@fnal.gov
Thanks

The search goes on......

Late last year when I was searching for an Ocean Hopper,
many of you forwarded leads to me. I've since located
an Ocean Hopper and my nostalgia project is underway.
Thanks to all!

One of you had a lead that surfaced when you visited another
ham in Zero-land (Kansas or Missouri?) for a radio-swap of
your own. (I believe you had driven a few hundred miles to pick
up a vintage receiver or transmitter.) You thought the other ham
might have an Ocean Hopper and you passed the lead along to me.
Although it turned out to be a Space Spanner, I had a nice chat
with the gentleman on the phone about the radio and restorations.
(The other thing I recall was the gentleman in KS/MO had just
upgraded his call.)

Now, I'd like to pass that lead along to a friend who is looking
for a Space Spanner, but I can not find any of my notes re the
original lead.

If this scenario sounds familiar, or if you know of a Space Spanner
out there in the Midwest someplace, please drop me a note and I'll
pass it along into the right hands.

Thanks again for all the help!

A M Radio poor reception help...Newbie needs help

I live in the S F Bay Area. I want to listen to some radio garden shows coming out of the L A Area.
The reception is very poor. I have heard you can buy some ....brand ..radios that pick up these far and weak signals.

I have also heard you can put a ..magnet....next to a radio to help the weak signals.

I think they sell these at Good Guys? 40 bucks?

Whats a cheap solution to help me hear these weak stations?

Thanks

reply here please

6217. Trade: Long range radio modems for Amateur/Shortwave Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-08 00:00:00 UTC
From: joshin@cats.ucsc.edu
Message-ID: <5fs8lq$t34@darkstar.ucsc.edu>
Source record: 181007
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.shortwave

Hi,

Interested in wireless networking, I have 2 radio-modems which allow
you to have a 38.4K (raw) data connection between 2 RS232 equipped
computers. (I was able to play on the net from the beach 1.5 miles from
home using my Unix box as the server).

I have 2 Gina 6000N spread-spectrum radio's, 50' of very-low-loss
cable, and a 6 dB gain yagi antenna. The radio's transmit over the 900Mhz
spectrum and output 725 mW (28.6dBm) of power. The radio modems maximum
speed is 38.4K full duplex to the serial port though their airspeed
communication rate is 128Kbps.

They were part of payment for a contracting job I had and I'd much rather
have a what's on the list below than the radio modems. :-) Full specs
on the radio's can be found at: "http://www.greamerica.com/6000n.html".

The modems retail for around $700 each, the cable $100, and the yagi $75.
So I'd like $1250 or trade for some of the following (or similar)...

1) Solid state HF rig (Kenwood TS-690S),
2) Yaesu FT-50R or Yaesu FT-51R + Yaesu FRG100B
3) Kenwood R-5000

Thanks,
Josh Goldsmith

Perhaps next year. The Mosfet final in the Ic-706 is capable os
transmitting up to 450 MHZ albeit low power. I still predict Yaesu has
something up their sleave and will announce it at Dayton 1997. Also,
I predict that by the end of August 1997 (or before), Alinco will unveil
there Alinco D-71. So save this message and use it against me if my
predictions do not come true. These predictions are from bits and pieces
of info I have received from various sources. They are not 100 % gospel!
When I get CONCRETE facts I will say so. This will eliminate any
misunderstandings on the NEWSGROUP.

The only one I could offer you involves connecting the mic
input through a PL-259 adaptor to the "ANT" connection on
your rig.

> >How long is the roger beep ?

Longer than the voice transmission.

> >What is the tolerance on the duration ?

Depends on the mood of the other ops on the adjacent bands.
(see amplitude and distortion specs)

> >What is the frequency of the roger beep ?

2700 hz is touted as the most "Annoying" audio frequency

> >What is the tolerance on the frequency ?

Depends on the mood of the other ops..

> >What is the maximum admissible distorsion on the signal ?

Set your audio for at least 110% modulation, then add the
roger beep to at least 200%. This will give you a large
harmonic content, and assure that operators on other channels
(bands.. Continents) are aware that you are un-keying

> Check with the CB crowd, they love these things and CB is where they
> belong.

I've heard that you can series connect echo-mike boxes too.

Nasa uses them for obvious purposes, and I suppose, properly
set up, they may have a legitimate use in ham radio as well,
but what I have seen from the CB crowd is that I can easily
pick up their roger beeps on 10M while driving by. On the CB
band, practically the only thing I can clearly hear is the
roger beeps, all WAY WAY overmod, and splattering from DC to
daylight. Given all that negative association, I don't think
we'll be seeing them on the ham bands any time soon.

6220. Phase noise tests in receivers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-08 00:00:00 UTC
From: res@cmprime.cis.att.com
Message-ID: <5fsao9$ehc@anchor.cis.att.com>
Source record: 181010

This report documents some tests I made with some receivers I had access to. My interest here involves performance of the receiver with respect to the phase noise of the receivers synthesizer and a comparison to non-synthesized receiver. In the past (ten years ago) I have tested receivers for strong signal performance and may once again set up to do that, but today I am only looking at phase noise. There are many other factors that determine the overall performance of a receiver and I am only looking at phase noise here. So please keep that in mind as you read below.

Also, these tests were kind of "quick and dirty" and a bit subjective, in that I did not really try hard to measure absolute levels of phase noise. So keep that in mind also as you read this.

The tests are intended to be simulations of "real life" situations that you might encounter if you live close to another ham who has a big signal on the band and who interferes with your operation. When he (she?) is on the air, you hear phase noise as a hiss that can cover up the signal you are trying to work. If the neighbor is further up the band the interference is less, and of course if the neighbors signal is weaker the interference is also less. The interesting part is that (I believe) there is no way for you to know when you encounter this situation in real life whether the phase noise you hear is coming from your receiver or the interfering transmitter. If it is coming from your receiver the effect is called reciprocal mixing, and that is what I measure. Probably, also, you can assume that if your receiver is clean, that your transmitted signal is also clean. So that if I measured enough receivers like the 3 that I did measure you could know whether the problem you encounter is your fault or his by knowing the type of transceiver he is using.

My receivers:
Yaesu FT1000MP with one stock 500 Hz filter.
Icom IC736 with 2 500 Hz filters
Collins 75S3 with 250 Hz mechanical filter

Test #1.
Ok, so here's what I did. I use an HP 8640B signal generator as my interfering signal. For all practical purposes it has no phase noise. I set it to a level of -30 dbm which is a very big signal and feed it into the receiver. While listening on the receiver I bring the signal generator down the band until I hear phase noise just begin and note the separation between the receiver freq and the sig gen.

FT1000MP - 9.3 KHz
IC736 -14.2 KHz
Collins - I never heard ANY phase noise with the Collins. No surprise,

in that it has no synthesizer. Wow, is it ever clean.

Test #2.
In this test I also inject a "desired signal" from a crystal oscillator at a level of -100 dbm into the receiver. This represents a moderately weak signal I am trying to copy, and I test to see how close the signal generator can come before the signal is degraded. This is a somewhat subjective test, I admit. In my lab book I wrote, "Level at which the signal is perfectly readable but with some phase noise".

FT1000MP - 2.7 KHz
IC736 - 9.27 KHz
Collins - 1.2 KHz (At this freq, the beat note from sig gen degraded the desired signal).

Test #3.
This test is another way of subjectively measuring the amount of phase noise or carrier that it takes to mask a desired signal if the interferer is a fixed distance up the band. In this case 5 KHz. If the phase noise is bad it will be phase noise that clobbers the signal. If the filter does not have a good shape factor (the skirts flare out too soon, as I believe to be the case in the Collins) but the receiver has low phase noise it will be the carrier that will clobber you. What I do is bring up the level of the signal generator while listening to the desired signal and note "some noise (A)", and then "severe noise but signal readable" (B) I list these 2 signal levels as A/B.

FT1000MP - -30/-20 dbm
IC736 - -40/-30 dbm
Collins - -30/-20 dbm (The degredation was not phase noise, but rather was desense due to the skirt selectivity in the mech filter.)

Comments -
I am surprised in the difference in the Yaesu and Icom synthesizers. The Yaesu is clearly a much quieter synthesizer by a dramatic margin. It means a REAL difference in how it will perform in a contest situation. Signals of gigantic proportion can be right up next to you and will not interfere with your ability to work weak stations. The ICOM is not a bad receiver by any means, and I love mine dearly for other reasons, but this 1000MP is in a league of its own. The Collins, on the other hand, just sits there unaware of the presence of interferers until they jump into the passband of the filter. I am surprised at how bad the 250 Hz mechanical filter is, though. If you tune in on the signal generator (or the internal crystal calibrator) and tune up the band you see the signal drop off and the S-meter die, but the beat note of the signal is still heard WAY, WAY up the band, indicating the poor skirt selectivity of the mechanical filter. Someday I hope to have a good spectrum analyzer/tracking generator so I can make accurate measurements and report on them, so my comments here are subjective.

Getting back to what I said about the neighbor, and you not knowing whether the phase noise you hear when he is on is due to your rig or

his.... If you are running a 1000MP, it is him! If you are running a 736 or any of the older rigs you still won't know. Unless that is, HE is running a 1000MP!

A friend has offered to bring over a Kenwood 870, and a IC706 soon, so we may have more data to add to the table in the near future. Anyone have a 756 in the NNJ area they'd like to bring over for an hour or so, to measure on my bench? I'm considering swapping the 736 for one in the "Dayton" timeframe?

I've had one for 6 weeks. It is a superb radio and the LCD readout is
going to set the standard. I would no longer be satisfied with a
transceiver that did not have the scope.

Additionally, it greatly outperforms the IC751 that sits next to it.

Thanks for reading this...

This hurts, but I have a near-mint Yaesu FT-767GX that I will part with for ONLY $900 plus shipping (about $25. depending on your distance from RI). I have decided to go mobile and need the dough to buy a smaller rig. The 767 is an excellent rig packed with Bells and Whistles! It puts out 116W of excellent audio, has digital meters, dual VFO, excellent filtering, keyer, antenna tuner that will match the worst loads, and so on. It is a solid rig that has performed flawlessly for me. I just have to get away from the table!

Please contact me if you are interested, 401-874-5372 or MAYNARD@URIACC.URI.EDU

Kelly,

The radio is pretty neat, but, many of them have a minor, possibly major flaw to look for as soon as you get it. Listen to yourself while transmitting at high power (5 watt) and while on a UHF frequency. While listening to yourself on another receiver, and NOT THROUGH A REPEATER, listen carefully while transmitting for a crackling, annoying little noises that are somewhat intermittant. I had this problem with an FT40 I bought a year ago. It is RF related and it took three trips to yaesu before they finally replaced the radio. The replacement has been fine. However, two weeks ago I bought an FT50R, and guess what, exact same noise problem, only on UHF. Isent it back to Yaesu and received it back yesterday, and quess what, it is not fixed. Yaesu admits (quietly) to this problem in their UHF Xmit section and even has a so-called "fix" for it, however, the fix is nothing more than further grounding and the use of some copper tape over the UHF power module.

I know two other people who have recently bought an FT50, and never new the problem even existed until I mentioned it. Then, they listened to themselves on something other than the noisy repeater, and found that their radios do in fact have the same problems.

I will be sending mine back again on Monday, and will expect it to be repaired OR REPLACED with a carefully checked new one. This is not happening on all FT50s (serious quality control), but it is happening on 3 out of four radios I know about.

Before doing any mods or other adjustments, check this problem out completely. It will not do it on the lower power outputs or on an external antenna or dummy load, but does it on both the factory antenna and the IcomFA-S270A.

Good Luck

Tom

6232. Info needed on "OLD" bug...

Newsgroup: rec.radio.amateur.equipment

Message-ID: <5fsv77$oqk@news.vbe.com>
Source record: 181022

I found an old bug in a local antique store. The key/bug is mounted on a heavy iron base painted black with white/gold decorative work around the perimiter of the top. The bug itself is brass with a round phenolic paddle and steel spring. It has a shorting bar. It is on an oval brass base obviously originally mounted as it is on the iron base plate. It is marked "PATENTED" on one side of the bug and "JH BUNNELL C CO" NEW YORK USA" on the other..... it's in honest shape and appears not only old but original..... the owner wants $19 for it..... any collectors know anything about it or what its worth.... I may purchase it just 'cause it sure looks neat <grin>

I was told the pricing will be $1300 at first and then will drop and
eventually include the separation kit . No discounting till all the
Older Ic-706 are sold out. They are a good value $1150 minus $100 rebate
from Icom plus a free seration kit value $50. Basically you are spending
$1000 even for the older Ic-706 verses $1300 for the New One.

Good point! The Icom 756 is Quad conversion , Has DSP "IF" ,and a
SPECTRUM SCOPE , and ANTENNA TUNER. If you buy a Ic 706 Mark II at
$1300 plus the overpriced Ic-180 tuner at $500 plus a DSP add on at
$250 You are up to $2050 dollars plus the receiver is so so !!!
It might might be wise to cough up the $2200 and buy the Ic-756 at the
start for a base rig!!

I suspect this may have less to do with poor skirt selectivity and a more to do with signal leakage around the filter.

The Drake R4C with 250 Hz filter does this also (unless you have the 300 Hz Sherwood filter in the 1st IF). You can hear a pretty wide swath of signals either side of center (very weak), but the signal "on center" pops way up into prominence. The leakage actually provides a bit of useful function, in that even though there is no significant interference disturbing the ability to copy the "on center" signal, you get a sound picture of activity either side of center. I'm told that many Drake-sters found this characteristic quite useful during contest ops.

Earlier Collins receivers - the 75A4, specifically - also suffer some from filter blow-by.

Ok here it is. I have two confirmations on the updated FT-900 radio !
Basically the radio will be similar to the Ft-900 except the radio will
cover 6 meters,2 meters, and 440 mhz in addition to HF. The radio will
have separete coax connections for HF and 6/ 2 meters / 440 mhz.
Basically, Yaesu will add permanent
modules inside the Ft-900 body. Also, the remote head will be able to
control "ALL" functions of the radio! The receiver performance on all
the bands is supposed to be far superior to the IC-706 Mark II.
I feel that after I ger two similar confirmations from credible
sources it is time to post. I was told that Yaesu will not come out with
a small (icom 706) type radio. I was told the radio will abe available
by August 1997 !!!!I am not sure if the Tuner will still be included in
the New Radio. It is hard to belive that they could pack all that stuff
into a small box. HEY, ICOM DID it!

Silly ME,

And I thought Collins, Drake, Icom, Yaesu, and Kenwood have made
excellent rigs for at leat 8 or 9 years, probably much longer. I guess
it takes NEW technology to make a HF rig that works well...well go
figure...huh!

Walter, often you can remove the can from the chassis, open up the can
from the bottom, remove the contents and then install a new modern
smaller working unit inside the can, connecting it to the lugs on the
original bottom insulating plate.

Looks the same, works like new.

A M Radio poor reception help...Newbie needs help

I live in the S F Bay Area. I want to listen to some radio garden shows
coming out of the L A Area.
The reception is very poor. I have heard you can buy some ....brand
..radios that pick up these far and weak signals.

I have also heard you can put a ..magnet....next to a radio to help the
weak signals.

I think they sell these at Good Guys? 40 bucks?

Whats a cheap solution to help me hear these weak stations?

Thanks

reply here please

From: swithrow@nyx.cs.du.edu (Skip Withrow)
Subject: FS: Kenwood TM-211A (2m mobile)

Finally got the dual-band I've been wanting, so retireing this
radio. It is in very good condition. I'm original owner, non-
smoker. Mobile mounting bracket has never been used and all
hardware is in original packing.

This radio has a unique front panel that swivels up and down. Great
for certain type of installation. Radio has always worked great
and has never had the cover off. It would also make a great packet
radio (25 watts).

Radio comes with original manual, mic, mobile bracket, and all hardware.
Power cord is short, but fuse and butt connectors are there. Speaker
not included (it's still in the car). This unit has no internal speaker.

Asking $175. I'll pay shipping to lower 48. First full price offer
gets it, else highest offer in next week can have it.

Subject: IC706 - Noisey fan

Hello all,

Any ideas for curing the noisey fan on my 706?

With the top cover off, the noise level is acceptable. As soon as the
cover is secured down I get a rumbling noise as well which can only be
stopped by holding the rig at an angle of 45 degrees or more - not
really conducive to comfortable operating!

I've had one for 6 weeks. It is a superb radio and the LCD readout is
going to set the standard. I would no longer be satisfied with a
transceiver that did not have the scope.

Additionally, it greatly outperforms the IC751 that sits next to it.

From: res@cmprime.cis.att.com (Richard E Stealey)
Subject: Phase noise tests in receivers

This report documents some tests I made with some receivers I had access to. My interest here involves performance of the receiver with respect to the phase noise of the receivers synthesizer and a comparison to non-synthesized receiver. In the past (ten years ago) I have tested receivers for strong signal performance and may once again set up to do that, but today I am only looking at phase noise. There are many other factors that determine the overall performance of a receiver and I am only looking at phase noise here. So please keep that in mind as you read below.

Also, these tests were kind of "quick and dirty" and a bit subjective, in that I did not really try hard to measure absolute levels of phase noise. So keep that in mind also as you read this.

The tests are intended to be simulations of "real life" situations that you might encounter if you live close to another ham who has a big signal on the band and who interferes with your operation. When he (she?) is on the air, you hear phase noise as a hiss that can cover up the signal you are trying to work. If the neighbor is further up the band the interference is less, and of course if the neighbors signal is weaker the interference is also less. The interesting part is that (I believe) there is no way for you to know when you encounter this situation in real life whether the phase noise you hear is coming from your receiver or the interfering transmitter. If it is coming from your receiver the effect is called reciprocal mixing, and that is what I measure. Probably, also, you can assume that if your receiver is clean, that your transmitted signal is also clean. So that if I measured enough receivers like the 3 that I did measure you could know whether the problem you encounter is your fault or his by knowing the type of transceiver he is using.

My receivers:
Yaesu FT1000MP with one stock 500 Hz filter.
Icom IC736 with 2 500 Hz filters
Collins 75S3 with 250 Hz mechanical filter

Test #1.
Ok, so here's what I did. I use an HP 8640B signal generator as my interfering signal. For all practical purposes it has no phase noise. I set it to a level of -30 dbm which is a very big signal and feed it into the receiver. While listening on the receiver I bring the signal generator down the band until I hear phase noise just begin and note the separation between the receiver freq and the sig gen.

FT1000MP - 9.3 KHz
IC736 -14.2 KHz
Collins - I never heard ANY phase noise with the Collins. No surprise, in that it has no synthesizer. Wow, is it ever clean.

Test #2.
In this test I also inject a "desired signal" from a crystal oscillator at a level of -100 dbm into the receiver. This represents a moderately weak signal I am trying to copy, and I test to see how close the signal generator can come before the signal is degraded. This is a somewhat subjective test, I admit. In my lab book I wrote, "Level at which the signal is perfectly readable but with some phase noise".

FT1000MP - 2.7 KHz
IC736 - 9.27 KHz
Collins - 1.2 KHz (At this freq, the beat note from sig gen degraded the desired signal).

Test #3.
This test is another way of subjectively measuring the amount of phase noise or carrier that it takes to mask a desired signal if the interferer is a fixed distance up the band. In this case 5 KHz. If the phase noise is bad it will be phase noise that clobbers the signal. If the filter does not have a good shape factor (the skirts flare out too soon, as I believe to be the case in the Collins) but the receiver has low phase noise it will be the carrier that will clobber you. What I do is bring up the level of the signal generator while listening to the desired signal and note "some noise (A)", and then "severe noise but signal readable" (B) I list these 2 signal levels as A/B.

FT1000MP - -30/-20 dbm
IC736 - -40/-30 dbm
Collins - -30/-20 dbm (The degredation was not phase noise, but rather was desense due to the skirt selectivity in the mech filter.)

Comments -
I am surprised in the difference in the Yaesu and Icom synthesizers. The Yaesu is clearly a much quieter synthesizer by a dramatic margin. It means a REAL difference in how it will perform in a contest situation. Signals of gigantic proportion can be right up next to you and will not interfere with your ability to work weak stations. The ICOM is not a bad receiver by any means, and I love mine dearly for other reasons, but this 1000MP is in a league of its own. The Collins, on the other hand, just sits there unaware of the presence of interferers until they jump into the passband of the filter. I am surprised at how bad the 250 Hz mechanical filter is, though. If you tune in on the signal generator (or the internal crystal calibrator) and tune up the band you see the signal drop off and the S-meter die, but the beat note of the signal is still heard WAY, WAY up the band, indicating the poor skirt selectivity of the mechanical filter. Someday I hope to have a good spectrum analyzer/tracking generator so I can make accurate measurements and report on them, so my comments here are subjective.

Getting back to what I said about the neighbor, and you not knowing whether the phase noise you hear when he is on is due to your rig or his.... If you are running a 1000MP, it is him! If you are running a 736 or any of the older rigs you still won't know. Unless that is, HE is running a 1000MP!

A friend has offered to bring over a Kenwood 870, and a IC706 soon,
so we may have more data to add to the table in the near future. Anyone
have a 756 in the NNJ area they'd like to bring over for an hour
or so, to measure on my bench? I'm considering swapping the 736 for
one in the "Dayton" timeframe?

From: joshin@cats.ucsc.edu (Joshua Burnett Goldsmith)
Subject: Trade: Long range radio modems for Amateur/Shortwave Equipment

Hi,

Interested in wireless networking, I have 2 radio-modems which allow
you to have a 38.4K (raw) data connection between 2 RS232 equipped
computers. (I was able to play on the net from the beach 1.5 miles from
home using my Unix box as the server).

I have 2 Gina 6000N spread-spectrum radio's, 50' of very-low-loss
cable, and a 6 dB gain yagi antenna. The radio's transmit over the 900Mhz
spectrum and output 725 mW (28.6dBm) of power. The radio modems maximum
speed is 38.4K full duplex to the serial port though their airspeed
communication rate is 128Kbps.

They were part of payment for a contracting job I had and I'd much rather
have a what's on the list below than the radio modems. :-) Full specs
on the radio's can be found at: "http://www.greamerica.com/6000n.html".

The modems retail for around $700 each, the cable $100, and the yagi $75.
So I'd like $1250 or trade for some of the following (or similar)...

1) Solid state HF rig (Kenwood TS-690S),
2) Yaesu FT-50R or Yaesu FT-51R + Yaesu FRG100B
3) Kenwood R-5000

Thanks,
Josh Goldsmith

Hello all...

I have a Butternut HF6VX Multiband Vertical Dipole for sale. Here are

the specs for the antenna:

Shipping weight: 12 lbs/5.4 kg

Height: 26 ft/7.8 m

Feedpoint impedance: Nominal 50 ohms with included

matching line.

SWR at Resonance: 1.5 or less--all bands.

SWR bandwidth for 2:1 or less: Entire 10, 15, 20, & 30 meter

bands; 250-300 kHz on 40 meters,

30-100 kHz on 75/80 meters.

Power Rating: 1500 watss PEP 80-10, 400 watts

PEP on 30 meters.

Wind loading area: 1.5 sq ft/0.15 sq m.

I am only asking $135.00 for it, and that includes shipping via UPS

Ground. Money Orders will ONLY BE ACCEPTED. No C.O.D. or personal

checks allowed. When I accept the money order, please include your

home telephone number so I can call and give you a UPS Shipping Code

so you can track it via UPS if so desired. Thanks for all who read this

in advance....

6255. Re: Alinco DX-70TH first impressions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-08 00:00:00 UTC
From: Joe BV/N0IAT <joentam@transend.com.tw>
Message-ID: <33209ECC.63E9@transend.com.tw>
Source record: 181071

I concur with both you folks regarding the DX70. I've had one since they were first released in Japan (March 1995) and later bought an Icom 706 due to all the hype. The Icom is coming back to the states with me to be sold at Dayton....The Alinco is fantastic, and I now own two, one for the house and one for the car.

I should mention that I also have a TS-50S, and a Yaesu FT-890. The TS-50S was inexpensive, so I bought it, but the Alinco beats it hands down. The FT-890 is a better radio, but a LOT bigger. I like the integrated ATU and CW keyer but the display is not easy to read in a car.

Missing from the Alinco? From my initial review in May 95, I had wished they put in a VSWR meter and an internal CW keyer....otherwise, a fantastic rig. I get better audio reports on the Alinco than from ANY OTHER RIG I'VE OWNED. Also, used it to get first place, CQ-WW CW Contest from Taiwan. This one's a real winner....and a great value.

A friend of mine who refurbished old radios mentioned that when he
can't replace a existing multi-cap like yours he takes the top off,
removes the innards and then puts in a couple of newer electrolytics,
which are smaller and then puts the top back on. It looks like the
original in every respect but has newer caps inside it doing the same
thing... hope this helps.

From: Ken Perry <paratex@aonline.com>
Message-ID: <01bc2b82$7db9c240$cad346c6@default>
Source record: 181076

Josh,

Welcome to the wonderful world of HF. I think you will be very pleased with the TS-520. Iused it for several years here in Alaska and in North Dakota with excellent signal and audio reports. In fact, I still technically have it, it is on loan to an "up and coming" in North Pole. Please be aware, however, that everyone has their favorite rigs, and which is best is a very subjective opinion.

Regards,
AL7GA
Ken

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

Try Texas Tower in Plano, TX.....I think that they sell the UT-89 for
less.....$77 is what I remember. Another source is KJI Electronics
(Gene) in NJ....I got my UT89 from him for $75 (201-239-4389. He works
out of his home so try him on weekends or after 7PM EST on weekdays.

Hope this helps,
George

6268. IC706 - Noisey fan

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-08 00:00:00 UTC
From: hz37@dial.pipex.com
Message-ID: <33216351.675302@news.dial.pipex.com>
Source record: 181084

Hello all,

Any ideas for curing the noisey fan on my 706?

With the top cover off, the noise level is acceptable. As soon as the cover is secured down I get a rumbling noise as well which can only be stopped by holding the rig at an angle of 45 degrees or more - not really conducive to comfortable operating!

Regards,

Martin Peters - G4EFE

>I'm deciding to buy and Icom Radio. Could anyone explain
>the differences between the 7100 and the new 8500.

The R8500 has much wider freq coverage -- down to 100 kHz.
The R8500 I tested has better sensitivity above 1,000 MHz, though
it receives images there. I measured the 12 dB SINAD sensitivity
using the EIA RS204-A standard procedure and plotted it to 2,000 MHz.
The graph appears in my MT review.

Both receivers have different memory bank arrangements:
The R7100A has fixed banks of 100 channels each, and the R8500 has
user adjustable bank sizes. Each memory channel in the R7100 can
have what I call a "sub-bank" number associated with it (0-9).

The R8500 scans and searches much faster than the R7100A.
The R8500 supports programmable alpha labels for the memory channels
and banks. It has more tuning step sizes, including a handy
programmable step size.

The R7100 has a CI-V computer interface jack, but the
R8500 has both a real DB25 RS232 and CI-V computer interface jacks.
The R8100 has a jack on the back which taps into the AGC or
baseband audio, depending on the setting of an internal jumper.

The R8500's audio peak filter has 2 bandwidths and adjustable
center frequency. I use it as a "tone control" on FM.

Physically, the R8500 is built much better, using a massively
cast metal chassis with internal partitions. It has better
shielding and is much heavier. The robust construction may account
for most of the price difference.

The R8500 is much larger than the R7100 and the front panel
controls are easier to operate since they are bigger and further apart.
The R8500 keypad employs soft rubber keys versus the hard plastic
R7100 keys. The smaller R7100 is handier for placing
on a car seat and driving around while looking for noisy
power line insulators, etc.

These are just some of the differences. See my R8500 review in
January 1997 Monitoring Times magazine for quantitative test results.

I sold my ICOM R7100A after buying an R8500 but both
are great receivers. I would have kept both if I didn't

have to work for a living :-)

Good Morning Hershman,

There is significant difference between a radio that covers the 70cm
band and one that does not. If this fact is lost on you, perhaps you
really do believe that you "predicted" this new Icom 706 MKII and not
an Icom 708 as Dejanews says. And to think, I just thought you were
full of it.

Rumor promotion and accredidation is a common way of seeking attention
but in the electronic media it has its pitfalls. Those darn archives
will come back to haunt you at just the wrong time. better luck next

time.

I read in the Ameritech White Pages (for Cleveland Ohio) that you could
dial 0 to be connected to aircraft / mobile / marine radios. I have
already faxed a letter to Ameritech and to Amerivision-Lifeline (long
distance co) for further info.
What I would like to know is, How can someone with a marine radio "call"
a telephone operator for a connection to a regular phone number?
Which frequencies are monitored by the phone companies?
Please respond by e-mail or fax.
Thankyou very much!

I opted for the option 3 (I own several 9 mHz filters and swap them in/out manually today). The RIT/XIT tuning rate adjustment is appealing. The new DSP is icing here.

Source record: 180912

If you hate the constant sound of the fan running while just listening on you 706 then you should try this simple mod!!

On the PA unit locate R65 47ohm next to the J1 coax plug on the left edge of the board near the fan wire plug remove it "requires a bit of heat and a small screwdriver to pry it of the board" and replace it with 100ohm half watt. lower values will make fan run faster but more noise you can try different values to find one that gives the air flow you want and the noise level you are comfortable with. this mod does not effect the hf tx fan speed or operation just the fan speed when in rx

Amazing what small improvments you can make when you finally get a service manual hz37@dial.pipex.com (Tech Ops) wrote:

Source record: 180913

I did not think anyone would want to change the hftx fan speed and beware the 706 does need airflow when using hf! but you have a few options with the tx fan speed i think looking at the curcuit!! if you remove R 42 1k small smd, located between Q15 and the electrolitic cap close to the fan plug that should disable the fast fan in tx and it should just run normal rx speed or the speed after the first mod but i would not recomend doing the first mod if you disable the fast speed on tx. or another option could be R 41 22 ohm large smd close to the back edge of the board right next to fan plug and replace it with a higher value half watt that should slow down both tx and tx fan speed but still alow a faster fan speed when in tx you would need to try a few value's to find one you are comfortable with! anyway let me know how you get on if you try one or the other sugestion i looked at doing somthing because it was so anoying hearing the fan running when the radio was quiet.

good luck!

>>...Standard C156A HT stack up against the Radio Shack HTX-202...

The Standard C156a received a great review in the February issue of VHF Magazine (authored by Gordon West).

More memories...more features...smaller than the HTX-202...and, at $200.00, about the same as the HTX-202 (when the 202 is on sale).

Standard produces quality Amateur Radio equipment. I own their dual bander C558a and a couple 220MHz-only C288a HTs - wouldn't trade 'em for anything else on the market.

I also have a HTX-202 set up for packet...it has also performed flawlessly for me for 3 years.

From: luke.14@osu.edu
Message-ID: <luke.14.6.332342D7@osu.edu>
Source record: 180918

I am going to purchase a set of two way radios and would appreciate some input on which frequency band is an all around better band as far as range.

I know UHF is better for going thru steel reinforced concrete in buildings but is it just as good as VHF at going over open terrain. ???

Does one use more power, as in will one band use more battery juice quicker??

Which has better characteristics for going over or around hills and mountains or a subdivision of houses ???

And I read an article that said that a one watt radio will transmit approx. 2 miles but a 2 watt will only go 2 1/4 mile ??? So is it worth paying the extra for a two watt???

Which band has less interference???

Please help

6314. 440 Mhz Repeater for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-09 00:00:00 UTC
From: "Matthew D. Strandberg" <mattstr@primenet.com>
Message-ID: <01bc2cf3$b0a96da0$d411dacf@default>
Source record: 180930

Hello. I have a 440 Mhz Repeater for sale. Here are the specs:

Frequency: 443.825 TX, 448.825 RX
Power: 20 Watts
Model: GE Master II UHF radio, converted to repeater

Includes: 440 Vertical antenna, 6-cavity "mobile" duplexers (smaller than regular size), RC-100 repeater controller w/ interface.

NOTES: This repeater has some audio problems, which would not be too difficult to fix. It involves some noise on the signals that pass through the repeater. I do not have to time or the knowledge to fix the problem. However, for someone who is familiar with repeaters, it shouldn't be too serious to take care of. I have reduced the price to account for the audio problem.

PRICE: $360.00, including shipping to anywhere in the continental U.S.

If you are interested, please send me e-mail.

Thanks,

Matt Strandberg, KJ7DX

One way to make the FT-990 transmit at 1750 meters is to scrape
everything out of the case, and then build a nice lowfer
transmitter/receiver in there .. :-)

Ok, Ok -- just kidding. None of the current crop of radios that I am
aware of are geared to transmit in the VLF range. I don't think you
will find a jumper or wire to cut that will get you where you want to
go.

Hi,

Y want to know the proceed to expand frequency
coverage of my IC-475H, actualy 430-440 Mhz.

Thanks in advance for your answer.

73, Marc

6325. FTV = WEFAX-FAX-SSTV-RTTY with SoundBlaster

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-09 00:00:00 UTC
From: "Brian E. Cauchi" <gcauchi@keyworld.net>
Message-ID: <01bc2cd3$3ce08540$0101a8c0@gcauchi.keyworld.net>
Source record: 180941
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc, rec.radio.amateur.space

Hello... Brian here!

If you have a RADIO and a SOUND BLASTER (or compatible card) you already have all the hardware necessary to:

RECEIVE - WEFAX, FAX, SSTV, COLOUR SSTV and RTTY
TRANSMIT - FAX, SSTV and COLOUR SSTV

*** Put the power of your 80386, 80486 or Pentium processor to real use ***

The external "decoder" units that are used by conventional users are modelled inside this software. This makes it easy to get started, inexpensive and rids you of the inevitable tangle of wires and boxes of decoders.

Absolutely no external hardware, other than a simple audio lead, is required by FTV. The current version decodes:

WEFAX (from weather satellites, e.g. 137-138 MHz)
HF-FAX (from terrestrial stations)
SSTV (from radio amateurs, e.g. 14.230 MHz)
RTTY (press, naval, weather etc)

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) The incoming signal is analysed automatically - standard modes, line rates, baud rates and keying polarity are automatically determined following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

*** What are you waiting for? Try it now! ***

Take a look at my web site for futher details, from where you can download an evaluation copy, at: http://www.geocities.com/SiliconValley/2504

Registration promotes the further development of this software and entitles the user to future upgrades paying only for delivery expenses, if any.
Current release is 0.98f

Finally, just in case some of you have trouble accessing my web site, here is my postal address (if you want a reply, send a self-addressed label and IRC's to cover expenses):
Brian E. Cauchi,
Gawhra, Domenico Cachia Street, Birkirkara BKR06, MALTA.

What can I say? Try it, and may you have as much fun as I am having...
73's from Brian.

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I am looking for either an AC-4 or AC-3 Power supply for a Drake TR-4.

Also, I am trying to put together a class for several techs to upgrade to general. Since we no longer have Heathkits for neophytes to cut their teeth on, I am looking for some Drake TR-4 transceivers for these guys to refurbish. On a scale of 1-10, I guess I would be looking for TR-4's in the 4 to 7+ range. Inexpensive is the word here. If you've got one that's kind of doggy (but not a total junker) or just taking up space and you haven't been too motivated recently to try to sell it, then this might be the time. Even if it's a junker, if we can scrounge spare parts from it, I might be interested. I just don't want burned up or rusted to oblivian hulks. Power supplies to go along with these would be nice, too--we can recap and fix up as long as the transformer isn't burned up.

Please let me know what you have. The closer to Portland, Oregon the better for shipping reasons, but if the price is right....

Hello all...

I have a Butternut HF6VX Multiband Vertical Dipole for sale. Here are

the specs for the antenna:

Shipping weight: 12 lbs/5.4 kg

Height: 26 ft/7.8 m

Feedpoint impedance: Nominal 50 ohms with included

matching line.

SWR at Resonance: 1.5 or less--all bands.

SWR bandwidth for 2:1 or less: Entire 10, 15, 20, & 30 meter

bands; 250-300 kHz on 40 meters,

30-100 kHz on 75/80 meters.

Power Rating: 1500 watss PEP 80-10, 400 watts

PEP on 30 meters.

Wind loading area: 1.5 sq ft/0.15 sq m.

I am only asking $135.00 for it, and that includes shipping via UPS

Ground. Money Orders will ONLY BE ACCEPTED. No C.O.D. or personal

checks allowed. When I accept the money order, please include your

home telephone number so I can call and give you a UPS Shipping Code

so you can track it via UPS if so desired. Thanks for all who read this

in advance....

As far as I can tell, it still has the brain-dead FM repeater split handling (split memories don't substitute for proper +/- offset configurations), they still haven't improved on the (awful) AT180, and they still don't have a decent narrow SSB filter.

Yecch...

Good point! The Icom 756 is Quad conversion , Has DSP "IF" ,and a
SPECTRUM SCOPE , and ANTENNA TUNER. If you buy a Ic 706 Mark II at
$1300 plus the overpriced Ic-180 tuner at $500 plus a DSP add on at
$250 You are up to $2050 dollars plus the receiver is so so !!!
It might might be wise to cough up the $2200 and buy the Ic-756 at the
start for a base rig!!

Subject: Phase Noise Tests

While Rick, K2XT, made tests that I feel are quite meaningful, it is not fair to compare an IC736 against the FT1000MP; they are not even in the same league. With that minor bitch behind me, I enjoyed the rest of the message.
I too, have run tests on many rcvrs over the years, starting with a 75A4, under full HP equipped lab conditions, but always turn to reality for the final test. Hook up a big antenna and find a contest or pileup. Phase noise is only part of the equation in seperating a great RX from the rest of the pack. There is not ANY lab test that can equal a 160M CW contest for example. I pick 160M based on experience.....a rcvr that holds up well on 20M or even 40M can still fall apart when surrounded by the absolute S Meter against the pin signals on 160M. Second and Third order IMD are the crucial requirements here. I found that problem with an early TS-870 that was loaned by Kenwood for the 1995 CQWW contest.

Rick, I hope you get a chance to compare that MP against other high performance radios such as the FT-1000D, IC-775, TS-870, Omni -6, IC-781 and ??? I no longer have access to that half million dollar lab and the latest rig I tested was a modified TS-940.
